>disregard certain rules such as dx and freebanding?

UNLICENSED RADIO OPERATION or operation of radio
transmitting equipment without a license (outside the
frequency limits of the citizens band) is a violation
of Section 301 of the Communications Act of 1934, as
amended, 47 U.S.C. Section 301. Such operation will
subject you to fine or imprisonment, as well as an in
rem seizure of radio transmitting equipment, in
cooperation with the United States Attorney for your
jurisdiction. Fines normally range from $7,500 to
$10,000.

Therefore your "freebanding" is not a selective
disregard for certain rules, it is a violation of the
Communications Act of 1934.

Don't you think my comment to Len was direct? Did it somehow appear as
left-handed to you?

I'll wear "smug" as defined in the Random House College Dictionary:

smug - 1. contentedly confident of one's own respectability, ability,
superiority, or correctness.

Note that the definition doesn't use "and" but rather "or". I'm
contentedly confident in my ability and correctness.

I didn't have to change anything, Brian. I was at no time out of band.
As I've told you several times previously, you need to address the issue
with individual French ops (you DO have their calls, don't you?) or with
the French PTT.

I do hope you'll note that there is no reversal of my position.

Now now Len, don't get excited over trivial things. You *know*
that all those messages are good practice for the big day when
duty will call... when the very survival of the human race will
depend on the ability of the Aamteur Radio Service to provide
the country with well trained Morse code radio operators.

(BTW, I just latched onto a fairly nice old wireline telegraph
relay made by Signal Electric Company for all of $22 on eBay.
Several people bid on it, but it was labeled as a "Key and
Sounder" and I guess it didn't look like much, what with no key
in the pictures. I take it none of them realized what it was.
They were probably all ham operators. They'd pay $75 for a key
that was machine manufactured by the thousands, and pass up an
antique that was made by hand.)

>> For many it's a hobby. For many others it's a tool...a means to an end.

Old Hiram just rolled over in his grave? (No, but lots of Sgt
Yaputz's just had conniption fits.)

> amateur radio were suddenly removed, the USA would continue
> to function just fine without it, losing nothing but some loud
> complaining from its life-stylers.

Now that is just *not* true. If that happened, all of these people
would have even more time to devote to political ideology. Rush
and his ilk would need more telephone lines, and talk radio would
advance another step up the economic ladder.

The country definitely benefits from the distraction that the
Amateur Radio Service provides. So don't you be disparaging it!

>>>It *is* a hobby, and you might as well a get used to it. Get used

"Tediousness" doesn't enter into the equation. Abbreviations are used
to save *time*. There are a number of commonly used abbreviations.
"FY" isn't among them.

I saw plenty of information about the states which made up the former
Yugoslavia. I didn't see any coverage of "war planning cirlces" and I
didn't hear one single person refer to "FY".

Apparently it is commonly known in his professional circles. Material
about the FCC and attorneys has appeared frequently in the news. It is
unfortunate that you missed it.

Why not? Because the two are not one and the same. We'll never know if
"desired" communications can take place at five words per minute unless
the desire is to go v e r y s l o w l y.

Would you call a driver who can safely drive a car at speeds no higher
than fifteen miles per hour a proficient driver? Would you call someone
who can play "Stardust" perfectly but only at half its normal tempo, a
proficient pianist?

Someone who can send and receive morse at five words per minute is on
the low end of mediocrity.

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

You, of course, have it backwards. You do the slinging. Then comes the
N2EY quote. Poor baby.

> Tell us, munchkin of many keys, was there a State Dept. Heath

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

No, I'd say that person had some basic driving skills.

>Would you call someone
>who can play "Stardust" perfectly but only at half its normal tempo, a
>proficient pianist?
>
No, I'd say that person had some basic piano skills.

>Someone who can send and receive morse at five words per minute is on
>the low end of mediocrity.

I disagree!

Someone who can send and receive morse at no more than five words per minute has some basic Morse code skills. Such a person is not proficient - yet.

And the sending test disappeared in the USA about 20 years ago.

The stated goal was elimination of the Morse proficiency test. That's been accomplished in the USA, because the remaining test is a basic skill test, not a proficiency test.

73 de Jim, N2EY

Be careful about playing the end of the band too closely, since the multivibrator is down for revamping.

>Would you call a volunteer fireman a hobbyist?

That's a non sequitur. What does "volunteer" have to do with it being hobby or not? Nothing. It means the person is donating their time, whether it is a hobbist or a professional.

However, for many (probably most) of them it is indeed a hobby. That is one reason there are very few totally volunteer fire departments, and the usual "volunteer" fire department is a mixed crew, where the professionals run the show and the volunteers take up the slack.

And if you've ever had anything to do with trying to manage volunteers in anything as serious and technical in nature as a fire department, you *know* that treating volunteers the same as professionals will get you 1) ousted or 2) lonely. They will rebel and either throw you out or leave themselves!

So you view "Maybe you can research" as a "powerful command"? Well,
kindly old gent, the Wouff Hong is of no concern of yours and you were
not prevented from researching anything on it (except maybe the
spelling).

> Here's some news, colonel: "Radio clubs" are not exclusively

I don't have any problem in the "ARS", Leonard, old boy. Then again,
what would you know of that? You aren't a part of the "ARS".

No, actually it isn't a rebuttal, much less a good one. Kim muses,
answers and reaches a faulty conclusion.

> Give my regards to Alec and Kim Basinger...whatever their
> ham calls are... :-)

I think they share your fate. They're among the non-participants in
amateur radio.

How'd you reach that conclusion?

> [back to the Heath course for you, old-timer...]

Woke up from that nap? Well, you seem to have missed the part where the Heath course was a portion of a course I took about fifteen years ago. Make yourself some tea and watch the telly, won't you?

How would you know?

When you are reduced the point of nothing to say other than an
attempt a insulting the place where a person lives, things tend
to go down hill fast for you. Sheesh, that's even a step below
trying to insult the person rather than discuss the issues.

Since you don't know, watching polar bears and walrus (along with
a lot of other very interesting marine life) is indeed far more
exciting and probably a great deal more useful than anything the
average person is ever lucky enough to be able to engage in.
There aren't many positions here for marine biologists, hence
the ones that are available are highly sought after by marine
scientists.

>>> Oh, dear, the "fact" fantasy again. Yes, some use amateur

A lot more than you apparently do!

> I dare you to stand outside a test session, survey 10 people over what was
>tested, and tell me how many people can "discuss" the core material.

So what? Do you actually think that is significant in some way?

Regardless, if it is true in your area it reflects poorly on *you*.
Why aren't you and others doing a better job of mentoring?

> Yes...I am being serious. I know seriousness is a bit of a stretch for
>Lennie, and I am getting my ideas about you.

Len seems to be the most serious regular here. Near as I can tell
he actually understands the _significance_ of these discussions, and
treats them accordingly.

I may just put everyone else into the killfile, and read only what
he says. That sure would improve the SNR.

>>All I can say is "You sure hit it on the head with that post, Len."

Apparently I have a *lot* more experience than you!

At management, that is.

I doubt it. Not from the silly assertion YOU just made!

One of the PRINICPAL leadership milestones in EMS and Fire Suppression is
to treat volunteers no differently than professionals...repect them, listen to
them, include them in the decision making process.

>At management, that is.

Of what? A McDonalds? KFC?

Obviously you don't take much of the policy and leadership criteria from
IAFC, NAEMT or NREMT seriously, Floyd.

Let me review....: >Apparently I have a *lot* more experience than you!

BBBWWWHAHAHA

Thanks, Floyd!...I needed that!

Sheesh!~

>trying to insult the person rather than discuss the issues

Floyd, I realize that you're in a remote spot...just found this NG and are taking great pleasure jumping in with both feet, but that and a fin will get you a cup of overpriced Java at Starbuck's.

YOU seem to be taking just as much liberty with jumping to conclusions about people as anyone, so your "holier than thou" chastizing is about as relevent as white-out in a snow storm.

>Since you don't know...(SNIP)

Ooooops...Just read ME the Riot Act about "insulting the person" and you slide right in to telling me what I know or don't know.

Pot/kettle/black.

(UNSNIP)...

> watching polar bears and walrus (along with
>a lot of other very interesting marine life) is indeed far more
>exciting and probably a great deal more useful than anything the
>average person is ever lucky enough to be able to engage in.

I have no doubt that it's a lot of fun and very educational. But I dare say some of the things I have had the plasure and honor of "engage(ing) in" have been a just-a-tad bit more useful to OTHER persons than watching wildlife.

>There aren't many positions here for marine biologists, hence
>the ones that are available are highly sought after by marine
>scientists.

I am sure. The relevence here is...?!?!

>> Or unless the only crank that get's turned in Barrow is done in one's

>and
>>others don't see it that way...But hey, who are THEY to know...?!?!
>
>A lot more than you apparently do!

And judging from the content of your posts, Floyd, a GREAT deal more than
you!

>> I dare you to stand outside a test session, survey 10 people over what
>was
>>tested, and tell me how many people can "discuss" the core material.
>
>So what? Do you actually think that is significant in some way?

Only if we are discssing what people really KNOW about radio theory and/or
practice and what they memorized to pass a test.

>Regardless, if it is true in your area it reflects poorly on *you*.
>Why aren't you and others doing a better job of mentoring?

It's true in MANY areas, Floyd. I have had the opportunity to participate
in VE exams in the northeast, the midwest, west coast and the south. The same
problems exist coast-to-coast.

>Len seems to be the most serious regular here. Near as I can tell
>he actually understands the _significance_ of these discussions, and
>treats them accordingly.

Un huh...Right. Lennie has zero-point-zero days (unless you count this
forum and "relevent") in practical Amateur Radio issues. He is not a licensee,
does not participate in local or national programs, and stands to suffer (or
benefit from) none of the consequences of policy matters that may be imposed
upion Amateur Radio.

>I may just put everyone else into the killfile, and read only what
>he says. That sure would improve the SNR.

And it would ALSO say a lot about your choice of fiction over facts.
Leonard is a documented pathological liar. If that's your chosen source of
"information", all I can say is "more power to ya"...

>>>All I can say is "You sure hit it on the head with that post, Len."
>>
>>Yep. I was right.
>
>I'm honored

Only if you like being made a fool of. If it is, then you're on the right track.

Steve, I think it would be ovbious to anyone who is familiar with
Morse code.

I'll let you answer your own question by answering this question.

Why are so many abbreviations, Q-codes, numbergrams necessary, and the
pursuit of the shortest callsign possible?

None-the-less, accuracy transcends speed.

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of February 28, 2003:

Novice - 35,264 (decrease of 14,065)
Tech - 250,573 (increase of 45,179)
Tech Plus - 88,477 (decrease of 57,457)
General - 140,170 (increase of 27,493)
Advanced - 84,019 (decrease of 15,763)
Extra - 103,550 (increase of 24,800)
Total - 684,979 (increase of 10,187)

Actually, it's a serious question.

>What does "volunteer" have to do with it
>being hobby or not?

The fact that the volunteer is unpaid. And does the firefighting activities as
something he/she "likes to do when not engaged in their vocation".

>Nothing. It means the person is donating
>their time, whether it is a hobbist or a professional.

How many volunteer firefighters are also professional firefighters? Are those
volunteer firefighters who are not also professional firefighters therefore
hobbyists?
-
>

All depends on what you mean by "treating volunteers the same as
professionals".

Amateur radio is serious and technical, too, for many hams.
>
But the question remains: Would you call volunteer firefighters who are not also professional firefighters "hobbyists"?

73 de Jim, N2EY

btw, watching walruses and polar bears in their natural environment sounds really interesting! The "IQ test" puzzler took a tiny bit of thinking until the little light went on.

Here's one I just heard on "Car Talk":

A young man visits Egypt and sees the pyramids. He is very impressed. He returns home, marries and raises a son. When the son is grown, he sends the son to Egypt to see the pyramids. Both father and son only visit Egypt and the pyramids once. The puzzling part is that the father makes his visit in 1995 and the son visits in 1969.

Your perception of "professional" seems to be a bit out of
whack, but that comes as no surprise.

What you don't do with volunteers that you do with the pro's is
treat them like they are required to do what management decides
needs to be done. The level of leadership necessarily has to be
on a much higher plane, or they get annoyed and go home! And they
may just stay there too.

I can't recall the exact quote, but it is something along the lines
of "Leadership is the art of convincing others to do what you want
them to, and to think it was their idea to do it." Leadership isn't
necessarily part of managing professionals, but it is essential with
volunteers.

That is the primary reason that professionals are usually hired
to be the backbone of EMS or fire departments.

That's an interesting presumption on your part. It appears that you had no real rebuttal since you didn't bother to post one. Instead you came up with a question for me but you supplied your own answer.

What part of my of statement was not true--that Brian said he was leaving and that he know tells us he never left? Was it the portion about you, Len, Alec Baldwin, Cecil, Brian and Richard Nixon telling us one thing and doing the opposite?

Dave K8MN

Poor, sad Leonard. I use modes other than CW as I choose. You do what
you can in amateur radio. I'll do what I want.

Good luck in working your way up to that five word per minute plateau.

What part of your response is it that you think excuses your
behavior? It appears to be an ill implemented attempt at
obfuscation, first you clip your original gibberish out of the
quotes and then you discuss something totally unrelated as if it
had significance.

>>Since you don't know...(SNIP)
>
> Ooooops...Just read ME the Riot Act about "insulting the person" and you
>slide right in to telling me what I know or don't know.

So? You *clearly* indicated that you didn't know. How does my
response, intended to inform, compare to your need to insult
people?

You seem to be another clone of Dick and Larry. You've reduced
everything to personal insults and can't provide a single shred
of logical thought nor evidence of any kind to support your
assertions.

There is no point in bothering to try exchanging ideas with
anyone with that kind of an attitude.

Oh, I'm not involved in New Age Newspeak and I don't believe in political correctness, Brian. In everything I do, I am: superior to some, inferior to others, on an even footing with others. When I'm superior, I'm contentedly confident of my superiority.

Maybe I she be more congnizant of the possibility that you'll get your feelings hurt if I'm seen to superior to you in something. I wouldn't want to hurt your self-esteem.

Even Len has to be superior to me in at least one way....hmmmm...Oh, I have it! Len is much more patient than I am. I would not have the patience to wait for several decades to become a radio amateur after becoming "interested".

Well then, Floyd, why don't you just go ahead and tell us ALLL ABOUT your "managing volunters", OK?

So far, NOTHING you have cited comes even CLOSE to anything I have EVER experienced, and I have had numerous "volunteer" experiences, from Red Cross, to VFD to the Civil Air Patrol.

I think you're a bit "snow blind", Floyd.

Steve

A *lot* of professional firefighters are also members of
volunteer fire departments.

A lot of people who could best be described as hobbyist are also
are members of volunteer fire departments.

The same is true of rescue squads.

>response, intended to inform, compare to your need to insult
>people?

If you feel insulted, Floyd, perhaps it's becasue you are in turn
insulting. Your entry to this forum is to jump in with both guns blazing and
to start adding flames to already intense flame fest. If you don't like
"heat", then may I suggest something in asbestos...?!?!

I see nothing from you that is substantial in the "policy" discusssion"
realm. Just jumped right in with Lennie and statrted swinging with the rest of
them.

Pot/kettle/black.

>You seem to be another clone of Dick and Larry.

As you are of Lennie and Brain. Pot/kettle/black. The only difference is
that you have a license. (As does Brian...Brian just doesn't know the
difference between "authority" and "eligibility")

>You've reduced
>everything to personal insults and can't provide a single shred
>of logical thought nor evidence of any kind to support your
>assertions.

For what? Elimination of the code test, Floyd? THAT has already been addressed by the FCC, and until WRC-03 addresses it later this year and the treaty is itself ammended, there's nothing else to discuss.

On the otherhand I have gone to some lengths to discuss other iminent policy issues in this forum and they always get pulled back to the same "name calling" events and round-and-round over the test.

>There is no point in bothering to try exchanging ideas with
>anyone with that kind of an attitude.

What ideas, Floyd? You don't like the code test? Whoopie. The FCC has said it doesn't either and will drop the test when it is no longer bound by treaty.

I don't particularly like it, but have clearly said in this forum that it is destined to happen, and have accepted it.

There are other issues to address. But TRY and get any two people in this forum to address them more than three or four posts before it becomes yet again another code test flame fest.

Welcome aboard, Floyd. You fit right in.

Steve, K4YZ

Dave, where in my post did I even *imply* that I said was not true? Where?
Since you'll be unable to provide the answer to that question--because I did
not imply that you stated anything untrue--I will go back to my original
implication. You seem to set yourself apart from saying and doing things
that you'll later change your mind about. Here's my question...again...to
you: are you saying that you have never, ever done or said anything that you
later changed your mind about? If not, then quit pointing out others as if
they've made a cardinal sin.

Keep mentally masturbating...there's probably more in your mind's capability
than anything else.

The man who wrote the tale has every right to establish the spelling and
he did so. One doesn't get to see a photograph of a "ficticious
article" very often.
So we have a name and an article. You've still blown the spelling of it
twice.

> Get some better tailoring on your uniform, colonel, your

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

What a dilemma, Len. If you post in your typical manner, you fulfill
the profile. You're an awfully big help toward that end when you go
into your "big lie" and "Goebbels" routine. It'd be difficult to
improve upon N2EY's words.

>ONE corporation or service that isn't rife with "manager" at all levels...?!?!?

Ever read Dilbert? Scott Adams worked in the telecommunications
industry when he started developing the Dilbert character, and
for years it was simply an inside joke about telecommunications
management.

Trust me, you can run huge corporate enterprises with wall to
wall managers, and still not have an ounce of leadership to be
found anywhere.

Do that with a volunteer organization, and pretty soon the number
of volunteers begins to approach zero.

>>That is the primary reason that professionals are usually hired
>>to be the backbone of EMS or fire departments.
>
> "Professionals" are often hired to "be the backbone" of EMS and fire
>systems in order to have a 24/7 coverage where volunteers often can't make the
>coverage.

Now *think* for a minute why the head honcho doesn't just assign
a volunteer to the mid-shift, or weekends, or weekdays, or
whatever it is that nobody asks for. Do that a few times and
see how many volunteers you've got.

Actually, you've got it backwards anyway. Volunteers are used
to round out the coverage so that you don't have to hire a full
crew 24/7.

> Well then, Floyd, why don't you just go ahead and tell us ALLL ABOUT your

I have served multiple elected terms on the Board of Directors
of more than one EMS organization, including one of the regional
non-profit corporations mandated by the State of Alaska to
provide oversight, training and certification of EMS providers.

Did you actually manage any part of anything?

I have never made a statement here or to the press over which I've had
to publicly eat crow. This isn't a case of, "I believe I'll have
spinach with that--oh, I've changed my mind". If you believe I'm
setting myself apart from you, Brian, Cecil, Len, Richard Nixon and Alec
Baldwin, you are 100% correct.

> Keep mentally masturbating...there's probably more in your mind's capability

I suspect most readers did, and those who didn't (as well as
those who did) aren't really interested in that subject for
discussion in this newsgroup. I can't argue with that kind of
good sense.

(BTW, if you want a _good_ puzzle from that, figure out how you
can watch the sun either come up or go down in the west.)

>>
>Naw, just a typical Car Talk nonautomotive puzzler.

I remember hearing it once too. Car Talk isn't exactly my
favorite program, but we have 2 radio stations here, KBRW AM,
and FM. There are times when Car Talk is the best radio program
on, as bad as that may be. Whatever, I don't remember the key
to the puzzle, but as a I said above it seems to be a twist on
words, and one doesn't necessarily see the obvious.

The difference between that and the IQ test was that it was the
person who originally asked the question who didn't see the
obvious; but the children who are answering definitely might.
The answer from a child who lives near the Arctic circle will
depend on which part of their life has been the most
influential, indoor activities such as school and reading or TV,
as opposed to outdoor activities where they would use first hand
observations, once the are old enough to know basic compass
directions, to decide where the sun comes up or goes down.

One odd thing is that I have used that example a number of times
and the responses to it are intriguing to say the least. People
who are good at trouble shooting electronic circuits (e.g., most
readers in this group) are usually logical to a fault, and the
logic of that example is so obvious that even if they've never
thought about it before they see the point in an instant. On
the other hand, the last time I mentioned that on Usenet it was
in a discussion about education where most of the participants
were home schooling their children or at least thinking about
it. Almost all of them argued that the test was valid and any
child should be taught by the age of 8 or 9 that the *rest* of
the world knows the sun comes up in the east, even if it doesn't
where they live. I was just floored by the arrogance of such a
view of the world!

It reminds me of... people who insist that the higher speed CW
proficiency is a necessary part of Amateur Radio *because* it
was required of them at some point. (Which reminds me that
we keep a Draft Board enabled too, just because males born

before 1955 or so had to sign up a long time ago too.)

Here?! To the press?! Are those the only two venues to which you accredit your life? You are no different from me, from Brian, from Cecil, Len, Richard Nixon, Alec Baldwin, nor anyone else, Dave. Though you seem to persist in a delusion of yourself in perfect grandeur--you're nothing short of human and we all, all say and/or think things that we change our minds on.

And you apparently love to delude yourself with making your answers up. You've stuck your foot in your mouth this time, Dave.

Neat-o! The only morse key I saw in any military installation
anywhere was a gold-plated old WW2 key used as a desk
ornament in an office. All the rest of the keys have been in
museums...or in a couple of "ham shacks" (which may have
been the same as...). :-)

Heh, thanks, but you should have seen it the year before
US amateur restructuring, especially that PCTA paragon,
Jim Kehler, KH2D, long absent from here but, thankfully,
still among the living.

The PCTA syndrome is founded on fantasy, maintained
by myth born over 70 years ago.

Those cranks are turning themselves...but just go around in
circles. :-)

>If you are saying we shouldn't define the rules and regulations
>by what is best for those guys... well, that makes too much sense!

No, it just means that I don't fall for Orwellism and the
Newspeak (or whatever George called it) where fiction and
myth become "truth," all PCTA opinions become "truth,"
and any dissent becomes a "lie." Dissent to ARRL party
lines is a "pejorative" or a heresy.

The "nyah-nyah" troupe of players might have a semblance
of "truth" of excludence of unlicensed humans if the FCC
required their staff and commissioners to be licensed in every
radio service. They just don't comprehend that many, many
others have been involved in radio other than amateur radio
and could care less what the Newington nabobs preach.

Hmmm...hadn't considered that aspect...I would imagine all
the frustrated, cut-off hammateurs would just become
pickled in aspect. :-)

>The country definitely benefits from the distraction that the
>Amateur Radio Service provides. So don't you be disparaging it!

Yes, morse code proficiency will help rid the world from alien
invaders out of outer space...or outre' space, whichever works.

On the other hand (literally), the cellular telephone is most
definitely satisfying at least 50 million Americans since,
according to our Census Bureau, one out of three is a cell-
phone subscriber. Each cellphone is a little two-way radio.

>>>>It *is* a hobby, and you might as well a get used to it. Get used

>He thinks he's being serious.

I'm not at all sure what Sgt Yaputz is "thinking" since I've
classified that USMC-dropout as a full-bore terminal flip-out.

I'm not convinced that the PCTA regulars in here are rational
anymore. They can't argue the subject of the code test but
keep resorting to little personalized nastygrams. Some, like
Reverend Jim, insist on "being serious" on any of their
pronouncements except that the pronouncements are only
pro their own nouns and sound like usual league propaganda
from 50 years ago.

>(But I heard you laughing as you

>
>All I can say is "You sure hit it on the head with that post, Len."

Thank you again. But, I have to reiterate that the PCTA nasty-
grammers just can't focus on the subjects, but want to fight one
for their morse Gippers because they fear loss of prestige,
further wounding of their egos, and a seemingly total inability to

change with the times.

It's amazing how these PCTAs insist on a distinct status of their quos without a decent change of quos, trying vainly to keep things as "their" amateur radio was when they were very young and just brain-washed into "the service." That may be why the amateur state of the radio art is maintained by the Tuna Tin Transmitters and repeats of the one-tube regenerative receiver in the US ham periodicals. Turf and tuna...is it any wonder that others smell something fishy? :-)

Watch this space and Sgt Yaputz go totally ballistic with his icy BM bombs in here. :-)

Incorrect. You WANT to hurt others that don't agree with
you. It's been demonstrated many times in here.

>Even Len has to be superior to me in at least one way....hmmmm...Oh, I
>have it! Len is much more patient than I am. I would not have the
>patience to wait for several decades to become a radio amateur after
>becoming "interested".

Tsk, tsk, tsk. "Interested in radio" got a big boost on being assigned to Army station ADA back in February, 1953...and that included VHF, UHF, and microwave "radio" as well as HF "radio." The word "radio" is put in quotes (there's no italics font available) because that includes ELECTRONICS. Radio is a subset of electronics.

When a station has 36 transmitters, all of which are 1 KW or above [43 by 1956, at least four running 40 KW], reaching across the Pacific, working 24/7, doing an important task during a heightening Cold War, it tends to pale the self-important league propaganda of "having one's own radio (!) and working the world!" Face it, there wasn't ANY State Department radio station anywhere in the world then or now to compare with ADA...and ADA was only about the third largest Army communications station in the 1950s.

RADIO has many different forms. It's primary function is to enable communications. Some radio is two-way and some radio is one-way (as in broadcasting or the NIST services). MOST RADIO in the world is operated, run, maintained by professionals, whether you care to admit it or not. Amateur radio is a minor activity in the entirety of radio on this world, "amateur" in that it is not done for pecuniary interest (i.e., not for money). Amateur radio is a hobby, a recreation, an activity engaged in for the fun of it, not some para-military service and not as some kind of Peace Corps kind of service. Fantasy and imagining amateurs are "really professionals" is a lot of nonsense, self-puffery that does not do anything for the hobby other than make the expounders appear foolish.

I became a professional in electronics and radio back in 1956 and electronics and radio became my career choice in 1958. Several companies and corporations have paid me a salary for four decades (and one continues with a retirement benefit) which was comfortable but not extravagant. I've written about radio-electronics in both professional and amateur publications, judged first by respective editors (none of whom I knew), then by readers. No complaints. My sole patent award is for radio.

YOU cannot "judge" me in any way, shape, or form as to the subjects of radio, electronics, or radio-electronics. You haven't done as much as I have, haven't worked the EM spectrum as widely as I have, have no evidence of original design work in radio or electronics. All you have is long tenure as a licensee in amateur radio, a hobby activity...and a smug, arrogant, over-superior attitude to those who won't agree with you. All you are capable of doing in radio-electronics is pejorating persons YOU don't like through the kind of postings you issue.

To continue the infantile iteration of "nyah-nyah, I've got a license and you don't" serves only to make yourself look like some kind of sociopathic adolescent with delusions of being a deity.

Amateurs are not radio deities and very, very, very few approach the "professionalism" in radio that some self-delusional sociopaths think is done in a hobby/recreational radio activity.

You can continue with the personal pejoratives, infantile imprecations, snide silliness, and general attempts at igniting a flame war from now to forever. That may make you feel "superior" but it is all unproductive nonsense. You have not achieved any "superiority" you feel you richly deserve. I can keep on replying for as long as I continue in this world. Patience and a long background of professional writing lets me counter your little nastygrams better, faster, higher, and stronger than you for an unlimited amount of time. But, doing such countering is unproductive and does NOT address any policy issues whatsoever on anything approaching debate on any issues.

Since no FCC staffer or commissioner is required to have any sort of US amateur radio license in order to MAKE amateur radio regulations, you have absolutely NO valid reason to forbid or insult anyone not having been granted an amateur radio license. You do it because you LIKE to do the mental masturbation thing with all those pejoratives against others who dare sully your pristine white pronouncements.

> Total - 684,979 (increase of 10,187)

Wow, where are all those Novice and Tech Plus license holders going? If you subtract the Advanced decrease from the Extra increase (assuming all upgraded), that leaves only 9037 license holders coming from the other license classes to Extra. Add that to the General increase (again assuming all upgraded), that means that only 36,530 Novice to Tech Plus could have possibly upgraded. Yet we see a decrease of 71,522 license holders just between the Novice and Tech Plus alone. And, of course, you have to assume that some Techs upgraded, which means that even more Novice and Tech Plus license holders have slipped out.

Remember, Tech Plus is being renewed as just plain Tech
now ... so some of the Tech Plus probably upgraded, while
others simply renewed, contributing to the increase in Techs.

That is not what I wrote.

> You are no different from me, from Brian, from Cecil, Len,
> Richard Nixon, Alec Baldwin, nor anyone else, Dave.

I'm quite different than those mentioned above. I made no public
statement here which I'd have to eat. I made no public statement to the
media which I'd have to eat.

> Though you seem to
> persist in a delusion of yourself in perfect grandeur--you're nothing short
> of human and we all, all say and/or think things that we change our minds
> on.

I've never claimed perfection. I'm claiming that I've not made some
goofy public statement which I'll have to retract upon changing my
mind. Not everyone feels compelled to blurt out something in haste
which will later make that person look foolish.

> > >
> > > Keep mentally masturbating...there's probably more in your mind's

> > You can always get the answer you like if you make 'em up yourself.

> And you apparently love to delude yourself with making your answers up.
> You've stuck your foot in your mouth this time, Dave.

Pay attention. You asked the question and made up the answer. That's
your foot and your mouth. I didn't say what you attempted to attribute
to me.

>
>Now *think* for a minute why the head honcho doesn't just assign
>a volunteer to the mid-shift, or weekends, or weekdays, or
>whatever it is that nobody asks for. Do that a few times and
>see how many volunteers you've got.

When I was running EMS regularly we carried pagers and responded from the residence (or barracks in my case). No "shift" to be assigned to. We did, however, "sign up" for days of responsibility, and again, I never knew of ANY occassion when we did not respond due to a lack of volunteers.

To the best of my knowledge, Station 352 never failed to roll a unit due to a lack of responders.

>Actually, you've got it backwards anyway. Volunteers are used
>to round out the coverage so that you don't have to hire a full
>crew 24/7.

In some urban areas, perhaps. In many SUBurban areas volunteers ARE the crew. Period.

In Hatboro/Horsham, (only 10 minutes from Philadelphia) there were only three "full-time" personnel...Two in the firehouse and one on the squad. They did most of the maintenance, and would often take the equipment to the fireground where the volunteers would respond directly to. The Squad never left the station without at least a driver (the "full time guy) and one EMT or Paramedic on board.

>> Well then, Floyd, why don't you just go ahead and tell us ALLL ABOUT
>your
>>"managing volunters", OK?
>
>Think in terms of "founding member"...

Of?

>I have served multiple elected terms on the Board of Directors
>of more than one EMS organization, including one of the regional

>non-profit corporations mandated by the State of Alaska to
>provide oversight, training and certification of EMS providers.

Congratulations. Now you're on igloo patrol. I am impressed.

I am not much impressed by "EMS Managers" or "Boards of Directors". EMS Managers, much like Boards of Nursing are turf-grabbing, me-first egoists who have held the advancement of EMS back from where it could be.

The simple fact that you can open the Annual copy of EMS Magazine to the section on state licensing requirements and find 50 different programs answers the question about what "EMS Managers" do for EMS.

If you're one of the "founders" of some EMS related organization, congratulations. But please don't brag on being an "EMS Manager" to me...there's too much to do and too much self-inflicted bureacracy to impress me.

>Did you actually manage any part of anything?

Yep.

Nothing addressed here about AMATEUR radio, although that's waht Dave
addressed.

>When a station has 36 transmitters...(SNIP)

Nothing addressed here about AMATEUR radio, although that's what Dave
addressed.

>RADIO has many different forms. It's primary function is to
> enable communications.

Ya think...?!?!

(MORE STUFF SNIPPED)

>Amateur radio is a hobby, a recreation...(SNIP)

...for some.

UNSNIP...>an
> activity engaged in for the fun of it, not some para-military
> service and not as some kind of Peace Corps kind of service.

In some places it's those things too.

>Fantasy and imagining amateurs are "really professionals"
> is a lot of nonsense, self-puffery that does not do anything
> for the hobby other than make the expounders appear foolish.

The only "expounder" who appeas foolish here is you, Your Foolishness.

>I became a professional in...(SNIP)

...nothing related to Amateur Radio.

>YOU cannot "judge" me in any way, shape, or form as to the
> subjects of radio, electronics, or radio-electronics.

Sure we can. YOU put it ehre for us to see, then by golly we can do with
it as we please.

>You haven't
> done as much as I have, haven't worked the EM spectrum as
> widely as I have, have no evidence of original design work in
> radio or electronics.

Ooooooooohhhhh...we are (un)impressed. Yet another "me me me" recital
from His Omnipotence about his Excellence In Radio Achievement.

>All you have is long tenure as a licensee
> in amateur radio, a hobby activity...and a smug, arrogant, over-
> superior attitude to those who won't agree with you.

I love it when some scumbag takes great pains to scream "me me me" in a
public forum and then has the temerity to call someone ELSE "arrogant" in the
same breath.

>All you are
> capable of doing in radio-electronics is pejorating persons YOU
> don't like through the kind of postings you issue.

Whew. Another Pot/Kettle/Black alert has just been issued for Lennie the
Lame!

>To continue the infantile iteration of "nyah-nyah, I've got a license
> and you don't" serves only to make yourself look like some kind
> of sociopathic adolescent with delusions of being a deity.

Well...He DOES have a license, and NYAHNYAHNYAH on you, Oh Unlicensed One!
I have one! A couple of elementary schoolers I know and a few middle schoolers
I know have one too...As do a few housewives and a handful of Astronaust and
Cosmonauts.

But YOU, "Mr. I've Been Doing It Longer/Better/Farther/Further", do NOT
have one.

So what are YOU going to do about it?

>Amateurs are not radio deities and very, very, very few approach
> the "professionalism" in radio that some self-delusional sociopaths
> think is done in a hobby/recreational radio activity.

>Since no FCC staffer or commissioner is required to have any
> sort of US amateur radio license in order to MAKE amateur
> radio regulations, you have absolutely NO valid reason to
> forbid or insult anyone not having been granted an amateur
> radio license.

Hmmmm...I am trying to figure out how you came to the conclusion that since FCC staffers are unlicensed, it bears any weight on what we call YOU, Lennie.

How YOU act and how YOU write in this forum and WHAT you write in this forum is what determines what we will call you or whether or not we will "play nice" with you.

YOU have certainly not extended that courtesy to US!

>You do it because you LIKE to do the mental
> masturbation thing with all those pejoratives against others
> who dare sully your pristine white pronouncements.

Pot/Kettle/Black.

I know...You're sitting in front of that screen reading this shaking your head saying "no, no, NO...", but while you ARE shaking your head, I will be on the radio doing all those radio things you CAN'T do because you haven't got what it takes to pass an Amateur examination.

And Lennie..."mental masturbation"...?!?! Is that your best shot?
Sheesh!

>> Tech Plus - 88,477 (decrease of 57,457)
>> General - 140,170 (increase of 27,493)
>> Advanced - 84,019 (decrease of 15,763)
>> Extra - 103,550 (increase of 24,800)
>> Total - 684,979 (increase of 10,187)
>
>
> Wow, where are all those Novice and Tech Plus license holders going?

Several places:

- As Carl points out, since April 15, 2000, all Tech Pluses who renew become
Techs.

- Some are upgrading to General or Extra. And Novices who pass Element 2 (only)
get a Tech, not a Tech Plus.

- Some are license expirations and cancellations. Of the expirations, some will
renew in the grace period.

>If
>you subtract the Advanced decrease from the Extra increase (assuming all
>upgraded),

Bad assumption. The attrition rate due to expirations can be considerable.

>that leaves only 9037 license holders coming from the other
>license classes to Extra. Add that to the General increase (again assuming
>all upgraded), that means that only 36,530 Novice to Tech Plus could have
>possibly upgraded. Yet we see a decrease of 71,522 license holders just
>between the Novice and Tech Plus alone. And, of course, you have to assume
>that some Techs upgraded, which means that even more Novice and Tech Plus
>license holders have slipped out.

Your models are oversimplified, Dwight. Expirations and cancellations are
considerable, and Tech-Plus-renewal-as-Tech even more of a factor.

You may want to consider the following comparisons:

Novice+Tech+TechPlus total changes since restructuring

Tech+TechPlus total changes since restructuring

both in absolute numbers and percentages.

Sure I can, Leonard. If I spike a volleyball and observe that you
can't, I can make a judgement that my spike is superior to yours. If we
play each other in checkers and I can consistently win while observing
that you consistently lose, I can judge that I'm a better checker player
than you. If we each won at checkers when playing each other, I'd be
able to judge that we are on an even footing.

Your statement doesn't wash.

> is a subset of electronics.

Nope. Your declared interest was in amateur radio over a period of
decades.

<snip of your military radio history>
<snip of the "different forms" of radio>
<snip of Len's observation of the place of amateur radio>
<snip of yet another iteration of Len's professional career>

> YOU cannot "judge" me in any way, shape, or form as to the
> subjects of radio, electronics, or radio-electronics.

Sure I could. I haven't done so because I don't feel that I have enough
information--that and the fact that I don't much care.

> You haven't done as much as I have,...

I'm just guessing that you don't really have any information about
whether that is the case or not. Would this be a case of you denouncing
me for what you perceive to be a superior attitude while donning such an
attitude yourself?
I'm confident that I've done a number of things which you haven't
done--like passing the Novice, General, Advanced and Extra class amateur
radio licensing exams.

> ...haven't worked the EM spectrum as widely as I have,

There's another one about which you have no information. Trying to
establish your superiority?

>... have no evidence of original design work in radio or electronics.

I've never claimed that I've done radio or electronics design work. I
have claimed that I've been a licensed radio amateur for nearly forty
years. This newsgroup is not about original design work in radio or
electronics.

> All you have is long tenure as a licensee in amateur radio, a hobby > activity...

I've judged your statement to be incorrect. That is not all I have. It
is, however, an important one here in a newsgroup devoted to amateur
radio.

> ...and a smug, arrogant, over-
> superior attitude to those who won't agree with you.

Remember, I've agreed to "smug". I'm not being arrogant and I have no
idea what "over-superior" is. Did you just make that up?

> All you are
> capable of doing in radio-electronics is pejorating persons YOU

> don't like through the kind of postings you issue.

That's another bad call on your part through your lack of information. The guy you describe could easily be yourself.

> To continue the infantile iteration of "nyah-nyah, I've got a license
> and you don't" serves only to make yourself look like some kind
> of sociopathic adolescent with delusions of being a deity.

No "nyah-nyahs" are needed. I have a license because I wanted one. I took all of the exams available. You have declared an interest in amateur radio spanning several decades, yet you took no action toward obtaining a license.
If the code is your stumbling block, a no-code license has been available for more than a decade. Several years ago, the regs were changed so that the highest morse speed required for any class of amateur radio license above the no-code ticket is a lentissimo 5 wpm. You've not taken advantage of any of these changes to obtain an amateur radio license. That tells us that your several decades of interest do not run very deep.

You would have us believe that you, a non-participant in amateur radio, know best how to shape its regulation. I'm in disagreement with you.

>
> You can continue with the personal pejoratives, infantile
> imprecations, snide silliness, and general attempts at
> igniting a flame war from now to forever. That may make you
> feel "superior" but it is all unproductive nonsense. You have
> not achieved any "superiority" you feel you richly deserve.

Again, you could be describing yourself as outlined in the profile provided by N2EY:

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or government/military service that a radio amateur has, if said radio amateur opposes Mr. Anderson's views, he/she will be the target of Mr. Anderson's insults, ridicule, name-calling, factual errors, ethnic slurs, excessive emoticons and general infantile behavior."

> I can keep on replying for as long as I continue in this world.

It isn't how long you can keep replying, Leonard. It is how many people you can influence or sway toward your position.

> Patience and a long background of professional writing lets
> me counter your little nastygrams better, faster, higher, and
> stronger than you for an unlimited amount of time.

You haven't exhibited much patience and there are times when your writing speaks more to "long" than "background". When is this proposed "better, faster, higher and stronger" to begin? Does your "unlimited

amount of time" indicate an attempt to do what you've previously claimed that you did--work 24/7?

> But, doing
> such countering is unproductive and does NOT address any
> policy issues whatsoever on anything approaching debate on
> any issues.

The "countering" is what you do most frequently. You've actually devoted very little of your time toward important things (for you) such as preventing children from obtaining amateur radio licenses. Your stake in amateur radio policy is a very small one. You aren't even a participant.

> Since no FCC staffer or commissioner is required to have any
> sort of US amateur radio license in order to MAKE amateur
> radio regulations, you have absolutely NO valid reason to
> forbid or insult anyone not having been granted an amateur
> radio license. You do it because you LIKE to do the mental
> masturbation thing with all those pejoratives against others
> who dare sully your pristine white pronouncements.

FCC staffers are paid to regulate amateur radio. You aren't. It is their job.
You've not been forbidden from commenting nor is anyone forbidden from ridiculing your ideas, your windy diatribes or your pompous manner.

You are insulted because your are insulting. You are insulted because you'd tell us how amateur radio should be run while you have very limited knowledge of amateur radio. You are made light of because you've expressed a decades-long interest in amateur on which you have never acted.

That's neat, Len, and something which you probably thought no one here realized. The cellphone user isn't required to obtain a license and must pay to use the short-ranged cellphone. Maybe the cellphone could be the answer for you. You could use it instead of participating in amateur radio.

Len, Len, Len, come back to reality. YOU do "little personalized nastygrams" on a regular basis. YOU persist in using terms like "Reverend Jim", "Herr Oberst" and the like. You take pot shots at amateur radio and at the ARRL.
Are you telling us that you think you are acting in a rational manner?

<wk3cqth@wk3c.com> writes:

>Remember, Tech Plus is being renewed as just plain Tech
>now ... so some of the Tech Plus probably upgraded, while
>others simply renewed, contributing to the increase in Techs.

Carl, Had it not been for the Technician class license
creation over a dozen years ago, US amateur radio
licensees would have DECREASED in number now by
over one hundred thousand. The vast majority of US
amateur radio license increases in the last dozen years
came about through the Technician class. Novice class
licensees had been continuously dropping in that same
time. PCTAs cannot see that...they see only what they
want to see and that is the OLD ways, the way They did
it in their long-ago youth.

More modern folks are just not impressed by "proficiency
in morse code as the primus inter pares of amateur radio.

This browns off the PCTAs no end since they desperately
need to regain their self-imposed titles of "King of the Hill"
in the OLD class structure of US ham radio. PCTAs are
outraged by this because their entire fantasyland mental
picture of amateur radio has evaporated. They cannot stand
reality and have lost their mental anchor in the safe harbor
of morse mythology. Pity them.

writes:

>> ...then you are unable to judge either "superiority, even-
>> footedness, or inferiority." Your problem, no one else's.
>
>Sure I can, Leonard. If I spike a volleyball and observe that you
>can't, I can make a judgement that my spike is superior to yours.

Spike, amateur radio isn't volleyball and the only "net" is the
one used to tie you down to keep you from floating away [due
to over-generation of internal gas not alleviated by all the gas
vented in here]

>If we
>play each other in checkers and I can consistently win while observing
>that you consistently lose, I can judge that I'm a better checker player
>than you.

Amateur radio isn't comparable to a game of checkers except
the average technical proficiency of ex-state employees is
confined to trying to move little round flat things on a checker-
board.

>If we each won at checkers when playing each other, I'd be
>able to judge that we are on an even footing.

You've been on a slippery slope so long you don't realize the
ground underfoot is flat.

>Your statement doesn't wash.

Tsk, tsk, tsk, to the down-and-dirty old-time hard-liner of
old-tyme hum radio, modern environment seems "unclean."

>I've judged, just now, that your ability to comprehend a tongue-in-cheek
>comment is not very good.

Correction: "Tongue-in-cheek comments" have to be done
without the tongue protruding. Yours sticks out.

>By the way, what shall we call what you
>demonstrate in here?

Call it caustic commentary, snide snickering, powerful parody
on the fat fantasy foibles of old-tyme hum radio, slimmo.

I hold up a cleaned mirror and point out the reflections are
the flaws in the image, not the mirror. PCTAs don't realize
that their Emperor's Clothes are invisible to the rational.

>Nope. Your declared interest was in amateur radio over a period of
>decades.

Oberst Heil seems to be so intrigued by his own visage in
the mirror that he cannot read coherently.

ONE of my many interests is RADIO. All of it, not just the
hobby of amateur radio. Fascinating stuff to all but the would-
be emperors trying on fantasy clothes.

>> YOU cannot "judge" me in any way, shape, or form as to the
>> subjects of radio, electronics, or radio-electronics.
>
>Sure I could. I haven't done so because I don't feel that I have enough
>information--that and the fact that I don't much care.

YOU cannot "judge" me in any way, shape, or form as to the
subjects of radio, electronics, or radio-electronics.

Your only "judgemental" ability is to act enraged/irritated/bellicose
when your precious opinions are not agreed with or taken as the
magnificent oratory you think it is...

>> You haven't done as much as I have,...
>
>I'm just guessing that you don't really have any information about
>whether that is the case or not. Would this be a case of you denouncing
>me for what you perceive to be a superior attitude while donning such an
>attitude yourself?

A description of factual message content, general attitude of
alleged "superiority" has been pointed out to you and the rest
of the readers. The image is there for all to see. That you
cannot see the same image is due to the astigmatic condition
of the ego. See your "I" doctor for treatment.

>I'm confident that I've done a number of things which you haven't
>done--like passing the Novice, General, Advanced and Extra class amateur
>radio licensing exams.

Some time ago. The world has changed since.

Let us know how your Heathkit Course (official, from state) is
coming along. Then we can talk about "comparing exams"
and your misguided thinking that radio "superiority" is all due
to amateurism.

>> ...haven't worked the EM spectrum as widely as I have,
>
>There's another one about which you have no information. Trying to
>establish your superiority?

No, not "superiority." State Department communications radio
bands are known, though not widely and certainly not via the
ivy-league publications of ARRL. Those bands do not go as low
as the US military's bands nor as high as the US military's bands.

>>... have no evidence of original design work in radio or electronics.
>
>I've never claimed that I've done radio or electronics design work.

...except for "restoration" of a BC-348 (?) HF radio receiver
probably built 60 years ago.

>I have claimed that I've been a licensed radio amateur for nearly forty
>years.

Which is about as meaningful as being a licensed vehicle driver
in two states and military service for over 52 years. :-)

>This newsgroup is not about original design work in radio or
>electronics.

Quite true. This newsgroup is devoted to snarly superior old-
tymers in hum radio shouting and hollering snarlygrams that
The Way Of Their Youth (long ago) is The Way of amateurism
today.

In the last earth revolution time this newsgroup is about a
militant snarly's insistence that amateur fire departments and
amateur emergency medical technicians are as good as or
better than professionals in those fields. That also includes
the snarly wailing from an amateur in state radio of long ago
demanding honor and respect for correspondence course
equivalents.

>I've judged your statement to be incorrect.

It's not for you to "judge," yer lardship.

>That is not all I have.

It is all you can use.

>It
>is, however, an important one here in a newsgroup devoted to amateur
>radio.

This newsgroup is supposedly about radio amateur POLICY,
not "devotion to amateur radio."

"Devotion to amateur radio" is done by the Church of St. Hiram,
aka ARRL. Learn to separate church, state, and reality.

>> ...and a smug, arrogant, over-
>> superior attitude to those who won't agree with you.
>
>Remember, I've agreed to "smug". I'm not being arrogant and I have no

>idea what "over-superior" is. Did you just make that up?

Your "agreement" is not binding anyone. The strings in
that binding keep unravaling.

You ARE arrogant, bellicose, and confrontational when there
is no need to be that way. YOUR attitude must prevail and
reinforcement is done by misdirection into things like physical
volleyball or mental checkers.

>No "nyah-nyahs" are needed. I have a license because I wanted one. I
>took all of the exams available. You have declared an interest in
>amateur radio spanning several decades, yet you took no action toward
>obtaining a license.

As I've said, I HAVE an interest in RADIO, ALL radio, and have
been interested in that technology for 6 decades.

As to "taking action" I will recount the Heilianspeak "necessities:"

I wanted a commercial radio license 47 years ago...I took all of the
exams available, passing all of them in one sitting.* I made radio-
electronics my lifetime career choice. In Heilianspeak that is
apparently "no action?!?"

>If the code is your stumbling block, a no-code license has been
>available for more than a decade.

Misdirection...as usual. Removal of the morse code test is
NOT for my personal gain or anything else. Removal of the
code test will affect ALL US citizens desiring an amateur
radio license.

Oberst Heil cannot Issue Orders so he attempts misdirection
into pejoratives on personalities again. There is NO case for
the retention of any morse code test for any kind of radio
operator license. The morse code test should be removed to
modernize and simplify regulatory beaurocracy.

>... That tells us that your several decades of interest do
>not run very deep.

Yes, it "tells you something," but only as a message-point
device to attempt putting down others who don't worship yer
lardship's mighty morse accomplishments in amateurism.

Wow! Think of that...a whole working career in radio-
electronics including retirement from regular hours and
THIS IS INSUFFICIENT DEPTH FOR JUDGEMENT!!!!

>You would have us believe that you, a non-participant in amateur radio,
>know best how to shape its regulation.

Oberst Heil got zapped by the twin lightning bolts on his
choking high collar again. Impedes judgement by stopping

the cold blood flowing in his neurons.

Newsflash, Spike: The Communications Act of 1934 did not require the FCC staff or commissioners to be licensed as any kind of amateurs in order to MAKE regulations, JUDGE regulations, MODIFY regulations, or DELETE regulations in and about US amateur radio. The much later Telecommunications Act didn't change that.

Already-licensed US radio amateurs do NOT have any legal "judgement" powers, do NOT have any "authority" of enforcement in or about US amateur radio more than any other US citizen, licensed or not. Oberst Heil demands both to be true yet they are not. All Oberst Heil can issue for General Orders in his "where-macht" is some non-regulations of Turf, a Territorial Imperative, aka "squatter's rights." He should stay squatting there and not try to squat in here. Such is unseemly.

>I'm in disagreement with you.

Poor baby.

It shouldn't be too baffling, Kim. Your statement and Brian's about
leaving the newsgroup, Cecil's about never tackling the Extra, Len's
about getting one "right out of the box", Richard Nixon's about not
having Dick Nixon to kick around anymore and Alec Baldwin's about
leaving the country are goofy statements which are enough to make them

feel foolish.

Apparently you misunderstand. I didn't write that volleyball is amateur
radio.
I used an analogy about judging superiority and inferiority. There are
numerous nets in amateur radio.

> >If we
> >play each other in checkers and I can consistently win while observing

Better check with your psychologist wife. Isn't the above a form of
transference? I just love your, "You haven't done as much as I have"
line.
You little humbug you.

> >I'm confident that I've done a number of things which you haven't
> >done--like passing the Novice, General, Advanced and Extra class amateur
> >radio licensing exams.
>
> Some time ago. The world has changed since.

That's right. It has become easier for someone to pass those exams.
All the less excuse for not having tackled them as you told us you
would.

> Let us know how your Heathkit Course (official, from state) is
> coming along. Then we can talk about "comparing exams"
> and your misguided thinking that radio "superiority" is all due

> to amateurism.

"State", Leonard, "State", not "state". You wrote of my reading comprehension but you've know been corrected twice (this makes a third time). The Heath General Class theory course was included as part of a course I took over fifteen years ago. It was completed fifteen years ago. I finished the larger course fifteen years ago. I hope this clears things up for you. If not, have someone read it to you.

> >> ...haven't worked the EM spectrum as widely as I have,

> as the US military's bands nor as high as the US military's bands.

Your comments grow more irrational. State Department communications "radio bands" are known by those who need to know. You'd be one of the "not widely".
Why would the ARRL ever write about them? I guess we're back to your not knowing what I've done in the military, amateur radio and governmental service.
You'll have to limit yourself to guessing.

> >>... have no evidence of original design work in radio or electronics.

> >I've never claimed that I've done radio or electronics design work.
>
> ...except for "restoration" of a BC-348 (?) HF radio receiver
> probably built 60 years ago.

You equate restoration with design work? What does my restoration of a vintage piece of receiving equipment have to do with anything? Does it bother you?

> >I have claimed that I've been a licensed radio amateur for nearly forty
> >years.
>
> Which is about as meaningful as being a licensed vehicle driver
> in two states and military service for over 52 years. :-)

You seem to forget where you're posting. This is an amateur radio newsgroup.
I'm a radio amateur. You're a guy who has claimed an interest in amateur radio spanning several decades. Somehow actually acting on that interest has eluded you.

> >This newsgroup is not about original design work in radio or
> >electronics.
>

> Quite true. This newsgroup is devoted to snarly superior old-
> tymers in hum radio shouting and hollering snarlygrams that
> The Way Of Their Youth (long ago) is The Way of amateurism

> amateur emergency medical technicians are as good as or
> better than professionals in those fields. That also includes
> the snarly wailing from an amateur in state radio of long ago
> demanding honor and respect for correspondence course
> equivalents.

I never worked in "state radio". I suppose your statement could have
some truth in it except for the parts where you write that anyone
demanded honor and respect and the part about correspondence courses?
Where did you ever get the idea that I took any correspondence courses?
We might add the part about "of long ago". I was working up until two
years ago. Why not work up the corrections and run 'em by us?

> >I've judged your statement to be incorrect.
>
> It's not for you to "judge," yer lardship.

Then I guess it isn't up to you to judge whether I can judge, O Foghorn
Lenhorn.

> >That is not all I have.
>
> It is all you can use.

Seems to be another case of your not having enough information.

> >It
> >is, however, an important one here in a newsgroup devoted to amateur
> >radio.
>
> This newsgroup is supposedly about radio amateur POLICY,
> not "devotion to amateur radio."
>
> "Devotion to amateur radio" is done by the Church of St. Hiram,

> You ARE arrogant, bellicose, and confrontational when there
> is no need to be that way. YOUR attitude must prevail and
> reinforcement is done by misdirection into things like physical
> volleyball or mental checkers.

Mental checkers? I didn't write about any "mental checkers". I find
you arrognat, bellicose, confrontational and sans amateur radio license,
you bystander you.

> >No "nyah-nyahs" are needed. I have a license because I wanted one. I
> >took all of the exams available. You have declared an interest in

> >obtaining a license.
>
> As I've said, I HAVE an interest in RADIO, ALL radio, and have
> been interested in that technology for 6 decades.

My warm congratulations! Your claimed interest in amateur radio over
several decades is the one which keeps tripping you up.

> As to "taking action" I will recount the Heilianspeak "necessities:"
>
> I wanted a commercial radio license 47 years ago...I took all of the
> exams available, passing all of them in one sitting.* I made radio-
> electronics my lifetime career choice. In Heilianspeak that is
> apparently "no action?!?"

I can't understand your thought process. Someone writes of your taking
no action toward obtaining an amateur radio license and you respond with
something about getting a commercial license 47 years ago. You equate
"no action" in obtaining an amateur radio license with "no action" in
obtaining a commercial license. You're different.

> >If the code is your stumbling block, a no-code license has been
> >available for more than a decade.
>
> Misdirection...as usual. Removal of the morse code test is
> NOT for my personal gain or anything else. Removal of the
> code test will affect ALL US citizens desiring an amateur
> radio license.

Yours is the misdirection. I wrote that if the code is YOUR stumbling
block, the no-code license is available to you.

> Oberst Heil cannot Issue Orders so he attempts misdirection
> into pejoratives on personalities again. There is NO case for
> the retention of any morse code test for any kind of radio
> operator license. The morse code test should be removed to

> modernize and simplify regulatory beaurocracy.

Did you think I ordered you to obtain a no-code amateur license? You
are confused again. You know, there must be some kind of case for
retention of a morse test 'cuz that FCC you are fond of informing us
about has retained it despite your bleatings, at least for HF access.

> >... That tells us that your several decades of interest do
> >not run very deep.
>
> Yes, it "tells you something," but only as a message-point
> device to attempt putting down others who don't worship yer
> lardship's mighty morse accomplishments in amateurism.

You already know that I use a number of modes. I can do that, according
to Part 97. If you feel "put down", I'm sure you'll learn to deal with
it in time.

> Wow! Think of that...a whole working career in radio-
> electronics including retirement from regular hours and
> THIS IS INSUFFICIENT DEPTH FOR JUDGEMENT!!!!

Don't confuse your career with amateur radio. Your career doesn't count
at all toward a ham license. You'll still have to pass the exams.

> >You would have us believe that you, a non-participant in amateur radio,
> >know best how to shape its regulation.
>
> Oberst Heil got zapped by the twin lightning bolts on his
> choking high collar again. Impedes judgement by stopping

> "where-macht" is some non-regulations of Turf, a Territorial
> Imperative, aka "squatter's rights." He should stay squatting there
> and not try to squat in here. Such is unseemly.

I see that you have a new adjective working for you--"legal". You don't have any "legal" judgement about what is best for amateur radio. You aren't even a participant in amateur radio. As to the rest of your irrational rant:

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or government/military service that a radio amateur has, if said radio amateur opposes Mr. Anderson's views, he/she will be the target of Mr. Anderson's insults, ridicule, name-calling, factual errors, ethnic slurs, excessive emoticons and general infantile behavior."

> minority or a minority in a HOBBY activity involving radio.

I didn't write that my *opinion* was right. I wrote that the writings
of Shakespeare, P.J. O'Rourke and N2EY were right. You are a definite
minority, Leonid. You're a non-participant in amateur radio in a
newsgroup filled with radio amateurs. Get used to being a wall flower.

Bzzzzt! Thanks for playing but that's not correct.

It's because of things like "poor Jimmie", "King of the Hill", "daily
editorials", "virtual ears tweaked and virtual nose honked", "Reverend
Jim", "Tsk, tsk, tsk", "poor baby". You're an uncivil and unpleasant
man.

> You keep working on that official state department Heathkit

Steve just because the FCC gave them a get-out-of-CW chit doesn't mean
that it cancels their handicap!
With most of them it's congenital.

Not by a longshot.... whether someone gets paid or not is irrelavent.
Volunteer firefighters work without compensation (except reimbursements such
as replacing damaged clothing or supplies). "Part-Paid/On-Call"
firefighters work for a certain amount per run. This applies from when the
time the "tones" go off, till the incident commander "clears" with dispatch.
All other time spent involved with the department is considered usually
volunteer.

The other end of the spectrum are, of course full-time/career firefighters.
Either way (in Michigan at least) the amount of time is almost the same
spent with working for a volly or part-paid as with a full-time/career in
regards to training, paperwork, work details etc. Hardly a hobby.

Believe me, volunteer or not, the level of work is still the same. We have to fill out the same paperwork, train as many hours, etc. The main choice for alot of vollys/part-paid-on-call firefighters for getting involved in the first place is for to serve the community. (and the excitement factor is there as well too I am sure! :)

Depends, some full-time departments don't have a problem with someone also being on a volly dept. and some do. I believe alot of it has to do with the damned unions. Biggest deal there is if someone gets hurt while on the volly department, is it fair for the full-time department to have to pay for

the time off?? (and other associated costs.....

Speaking for our department, we usually have at least 6 of 16 show up on every run we have and sometimes even more. Never have missed a call, where the truck hasn't rolled as far as I can remember with our department. There has always been at least 1 or 2 rolling with our trucks.

>
> All depends on what you mean by "treating volunteers the same as
> professionals".

Only difference is the pay!!!!!! In fact you get even more respect in the volly departments I think than in full-time departments. Volunteers are professionals. The fact that they sleep at thier own houses and not at the firebarn is about the only difference. Volunteers by their very own nature are more likely to get involved and also (when there is positive leadership) be led to great sucesses more over than full-timers. For the purposes of discussion here, I am going with volly/partime versus full-timers as the distinctions here.

It may be for some members of a volly department. For the rest it is either
"the second full time job" or the desire to serve their community.

Maybe either one of you should post these questions in alt.firefighters ??

Jeessh..... Looks like you better go out and bust those people with the
following callsign (call area irrelavent in this case!)

KC#UNT

I know that either that callsign has been issued or is getting pretty damned
close to becoming issued in the 8 callsign district!

If you REALLY believe your statements about Kims callsign, then we better
see ya go after the suffix of ASS, SEX, FUK, DIK, MUF, NUT, and probably
others that you can think of..... and get these people busted or nagg them
equally. Otherwise it is mere hypocrisy.

140. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2003-03-03 09:28:05 UTC
From: n2ey@aol.com
Message-ID: <20030303042805.27873.00000902@mb-mj.aol.com>
Source record: 62222

For a historical context, here are some numbers on the growth of US amateur radio in the past 30 years or so. All numbers are rounded off but are accurate to within 2%. Sources are various Callbooks and US census data.:

US Hams:

1970: 270,000
1980: 350,000
1990: 514,000
2000: 680,000

Growth Rate:

1970 to 1980: 29.6% (120,000 net growth)
1980 to 1990: 46.8% (164,000 net growth)
1990 to 2000: 32.2% (166,000 net growth)

Oddly enough, percentage growth slowed down after the introduction of code test waivers and the Tech lost its code test. The total net growth in the '90s was almost exactly the same as in the '80s, even though the US population was larger.

As a percentage of the total US population:

Year - US population/annual growth - US hams - % hams
1970: 203 million 270,000 0.133%
1980: 227 million 350,000 0.154%
1990: 249 million 514,000 0.206%
2000: 281 million 680,000 0.242%

US hams as a percentage of population increased 0.021% in the '70s, 0.052% in the '80s and 0.036% in the '90s. So the growth slowed down after the introduction of code test waivers and the Tech lost its code test.

It stands to reason that if code testing were an 'unnecessary, arbitrary, and distasteful (to many) barriers to entry', those who were interested, but dissuaded by those unnecessary barriers would "jump in." when the 'barriers' were eliminated. Except that's not what happened, in either absolute number of hams or percentage growth. Growth in total hams was almost exactly the same during the '90s, compared to the '80s, and the percentage growth actually dropped.

Not at all, Jim. Even if you factor in the transfer of Tech-Plus to Tech,
it still adds up to a lot of license holders dropping out instead of
upgrading.

148. A GREAT Programfor CW Newbies!

Newsgroup: rec.radio.amateur.policy
Date: 2003-03-03 14:41:23 UTC
From: Bert Craig <wa2si@arrl.netNOSPAM>
Message-ID: <nQJ8a.7591$oY6.2994@nwrdny03.gnilink.net>
Source record: 62235

This post is particularly aimed at any newbies (Myself, very much included.) that might be reading the newsgroup. Here is the link to download G4FON's 'Koch Method CW Trainer' as well as KB2TQX's 'KochRX.'

http://www.qsl.net/g4fon/CW%20Trainer.htm

Lemme tell you, this makes learning and practicing CW really fun, almost like a PC game. Download and install both into the same directory and then start off with two characters. KochRX allows you to enter the sent Morse character on your keyboard and at the end of the session (You can vary the time and speed.) it'll compare actual sent vs. what you've typed and grade it.

My 5-yr. old daughter and I usually practice with me sending on a code practice oscillator and her saying the character but now she competes against herself trying to get the "high score." I just set the pgm to send her E, T, A, N, I, & M (That's all she knows for now.) with an 'Actual Character Speed' of 15-wpm and 'Effective Code Speed' of 5-wpm....and viola! Use KochRX to run the G4FON software so it'll be just like a game. Give it a shot, it's really quite fun. :-)

Every so often some control-freak dufus comes up with the mistaken
idea of placing restrictions on the wide availability of
amateur radio equipment and supplies. These are the folks who
suggest it be a crime to own amateur equipment without a
license, and who are not thrilled about the fact that
Radio Shack sells a line of UHF/VHF amateur equipment right out
under the nose of the impressionable public. I suspect they
don't like the idea that soldering guns and schematics are
openly sold to those without the proper credentials also.

While it is easy, on the surface, to agree with their
goal (keeping amateur equipment out of the hands of
bootleggers), I feel the attitude that amateur equipment
should be treated as some sort of controlled substance is
short-sighted and in fact damaging to our service.

I live in a large metropolitan area. We have one full
line amateur store in town. There are no other similar stores
in the whole state. In the four states which border us, there
are 2 more amateur radio stores. THAT'S IT! In 5 states, there
are only 3 stores! In the whole country, my guess is that there
are less than four dozen stores selling amateur radio equipment,
antennas, and supplies! It is as though we were some secret
society, bent on concealing our presence from the world.

Not all that many years ago, there were at least 6
electronic stores here in town which sold amateur equipment
(not exclusively, but they all had a good selection). Add to
that two Heathkit stores, and even the Sears stores sold amateur
transceivers for awhile. (Yes, Virginia, right there along with
the Craftsman sockets and Silvertone TV sets.) In the same era,
Radio Row in NYC was blocks of wall-to-wall storefronts catering
to electronics experimenters. Popular Science magazine had a
regular column about amateur radio, and occasional construction
articles. Every second little town had an amateur radio club.

Amateur Radio was a populist, Joe SixPack kind of hobby.

During those years it was easy for a person to get
interested in being an amateur, to shop around for the best
deal on equipment, and to meet an Elmer. We were visible to
the public, and well regarded.

Then somewhere along the line came the magic of 1-800
shopping, amateur radio marketing became streamlined, and
radio stores disappeared from Hometown America. With the demise
of the local radio store, all the Elmers disappeared into their
shacks and newcomers flounder around in fancy four-color ads in
back of CQ and QST magazine, trying to decide how to be a ham.
Clubs floundered, in part due to the loss of hams around the
coffee pot in the back of the local electronics part store.

Rather than continuing to restrict the availability of
amateur equipment, as though we were selling assault weapons
or recreational pharmaceuticals, I vote for opening up the market.
Let's have radios for sale in the strip malls alongside the video
games, Lionel trains, and mountain bikes. And it won't hurt if a
few of us put on our Elmer-suits and lurk around to spot the
likely recruits.

When they outlaw ham gear, only outlaws will be hams.

Sorry if I wasn't clear, Dwight. We seem to be saying the same thing different
ways. I agree that there are significant numbers of dropouts.

The main point is that the growth in Technicians is due to three factors - new
Techs, upgrades from Novice, and renewal of Tech Pluses as Techs. Counteracting
this are dropouts and upgrades.

No, Steve, it's obviously an opinion, even though it's worded as if it were a true fact.

The actual license numbers do not back up that opinion, though. The number of new hams in the '90s was almost exactly the same as in the '80s. Percentage growth actually declined.

That sounds like the power requirement rules also. The OF's say they
"desire" a 40 over 9 signal report.

> Would you call a driver who can safely drive a car at speeds no higher

Even if sending and receiving are 100% accurate, and the desired
message gets through, you would classify the operator as less than
proficient?

> And the sending test disappeared in the USA about 20 years ago.

For all Morse exams regardless of speed, not just the 5wpm exam.

> The stated goal was elimination of the Morse proficiency test. That's been
> accomplished in the USA, because the remaining test is a basic skill test, not

Really? Is that in Part 97? All of Title 34?

The rules don't even define what Morse Code is, let alone what are
basic skills or proficiency.

> becoming "interested".

I became interested in radio communication in the late 60's. Money was an issue, and then there were competing interests. I became licensed 1987. I often wonder had I been exposed to the pettiness of some long time amateurs if I would have pursued it at all.

> 1990 to 2000: 32.2% (166,000 net growth)

If the growth rate continues at the 2000 to February 2003 rates we
could be projecting about 720,800 hams by 2010 or about 40,800 net
growth (6%) Quite a difference from the last three decades.

Apparently you do understand an analogy but'd you'd like to dismiss it
because it voids your construct.

> > Someone who can send and receive morse at five words per minute is on

Just in case your accuracy is thrown off at the breakneck speed of five
words per minute, of course. Five words per minute doesn't demonstrate
proficiency.

What is it that you're trying to say, Brian? Are you in disagreement
with something I've written? Do you maintain that Len is already a ham?
Do you not think that five words per minute represents a plateau to
him. Do you think he has already achieved 5 wpm?

Money was an issue for me too. I didn't let that stop me. I earned
some of it. I cajoled my parents for some of it. The sum total spent
wasn't much at all, just a little over a hundred dollars. I had
competing interests too. I found a way to pursue all of those.

> I often wonder had I been exposed to the pettiness of
> some long time amateurs if I would have pursued it at all.

I never encountered too much in the way of petty radio amateurs. I've
found the vast majority pleasant and helpful. Did you have that chip on
your shoulder back when you made your decision or did it show up

afterward?

We're speaking of your future course of action.

Do you intend to work other "amateurs" that you know are out of band?

>should be treated as some sort of controlled substance is
>short-sighted and in fact damaging to our service.

For years the filthy, evil, unlicensed (hack, ptui) CB
radios have been sold at Sears, the late Montgomery
Ward, Lowe's, K-Mart, Target, Kragen Auto Parts, as
well as Radio Shack retail outlets.

>I live in a large metropolitan area. We have one full
>line amateur store in town. There are no other similar stores
>in the whole state. In the four states which border us, there
>are 2 more amateur radio stores. THAT'S IT! In 5 states, there

>are less than four dozen stores selling amateur radio equipment,
>antennas, and supplies! It is as though we were some secret
>society, bent on concealing our presence from the world.

I think the Greater Los Angeles area qualifies as a "large metropolitan area." My wife and I went to a Ralphs market on Victory Boulevard in Burbank this morning (3.7 mile trip) and an HRO store was right across Buena Vista from that food market. I didn't go there but I know that they have a new double-front-width location in that same mini-mall with much more space inside and better fixtures, etc. HRO sells a lot of different radio equipment now compared to 25 years ago. I can find at least five other stores displaying amateur radio equipment for sale in just the San Fernando Valley area of L.A. (population about 1.5 million).

>Not all that many years ago, there were at least 6
>electronic stores here in town which sold amateur equipment
>(not exclusively, but they all had a good selection). Add to
>that two Heathkit stores, and even the Sears stores sold amateur
>transceivers for awhile. (Yes, Virginia, right there along with
>the Craftsman sockets and Silvertone TV sets.) In the same era,
>Radio Row in NYC was blocks of wall-to-wall storefronts catering
>to electronics experimenters. Popular Science magazine had a
>regular column about amateur radio, and occasional construction
>articles. Every second little town had an amateur radio club.
>Amateur Radio was a populist, Joe SixPack kind of hobby.

It was? :-) I got a subscription to Popular Science while in Junior High ("middle school" now) and it did NOT have any "regular column about amateur radio" 1946 to 1949. That must have been later? They did have some neat regenerative receiver and audio construction articles and a "wireless broadcaster." John Wood Campbell, editor of (then) Astounding Science Fiction magazine, had a two-part article on a wideband oscilloscope one could build. Campbell was an EE.

I grew up in northern Illinois, far from NYC's "radio row" and the sole "electronics store" in Rockford was H&H Electronics partnered by a couple of radio amateurs that started up about 1947 (Gene Hubbell, SK, ex-W9ERU, W7DI later, one H&H partner). Rockford had about 85,000 population then. No "coffee pot in the back (or front) at H&H." No "Elmers (in or out of elmer suits)" hanging around to help middle-schoolers. Emphasis in "radio" then was FM broadcasting, "Hi-Fi" music systems with magnetic tape recording (new at that time), and broadcast television received via elaborate antennas in the fringe area of Chicago TV reception 90 miles from there.

I recall only one "ham club" in the home town but there were no "Elmers," rather some OFs and WW2 veterans who had a like of strong drink..."beer can vertical" parties were a big "six-pack" adult thing that never resulted in stable or viable antennas. My "Elmers" were non-amateurs, instructors in middle school, later in high school, who were not confined to

amateurism.

>During those years it was easy for a person to get
>interested in being an amateur, to shop around for the best
>deal on equipment, and to meet an Elmer. We were visible to
>the public, and well regarded.

That seems to have been a geographic localized thing.
In the late 1940s "small towns" of 80K population had firm,
fair-trade prices on ready-built equipment or one ordered
out of the Allied or Newark catalogs.

>Then somewhere along the line came the magic of 1-800
>shopping, amateur radio marketing became streamlined, and
>radio stores disappeared from Hometown America. With the demise
>of the local radio store, all the Elmers disappeared into their
>shacks and newcomers flounder around in fancy four-color ads in
>back of CQ and QST magazine, trying to decide how to be a ham.
>Clubs floundered, in part due to the loss of hams around the
>coffee pot in the back of the local electronics part store.

The only "coffee pot" in a ham store I've encountered is the
local HRO...a Mr. Coffee appliance apparently made during
store opening time and never cleaned/refreshed afterwards.
"Across the hill" to the south in L.A., Jun's or Henry Radio
never had such, nor did Electronic City in Burbank. Retail
stores seem (oddly?) bent on SELLING, not acting as
"Elmers" or club surrogates.

Of course, I'm a relative newcomer, you understand, moving to
L.A. area in 1956 and owning this present house for 40 years.
I've been to NYC's fabled "radio row" in 1952 and found it not
quite as spectacular as legend would have it. :-)

However, all the cynicsm of the "lack of ham stores" has over-
looked something. Several somethings, in fact. Broadcast TV
happened in the late 1940s with much experimentation there
for the electronics hobbyist. "Hi-Fi" music systems was another
non-ham area wide open for personal experimentation, a benefit
being all sorts of music available in the home, reproduced as
faithfully as 1940s and 1950s technology allowed. The spread of
FM and color TV broadcasting opened more vistas for the
electronics hobbyist to tinker and enjoy. When Class D CB
was allocated in 1958 there was an initial surge in building CB
transceivers even though somewhat illegal but a wide acceptance
of short-range two-way radios for mobile population soon made
many different CB transceivers available on the consumer market.

The advent of the solid-state ear brought a flood of new venues
for the electronics experimenter...all sorts of home convenience
electronics, model aircraft radio control, "carrier current" quasi-
radios for intercoms, stereo music systems, novelties such as

light flashers, even closed-circuit TV one could put together for home or workplace. Once the microprocessor IC became a market item, the personal computer craze started in the mid-1970s and shows no sign of stopping today. Consumer electronics stores and chains appeared 30 years ago and continue today with a veritable treasure-trove of "adult toys" for enjoyment of life. Less than two miles from my house is Fry's Electronics, a huge super-market of consumer electronics from PCs and Macs to TVs and music systems, all kinds of telephones and their peripherals, and radios. Radios that include SWL receivers (many grades), FRS handhelds, CBs, cell phones, scanners (desktop and handheld), AM/FM music receivers, GPS handhelds, and RF signal generators (Fry's has a couple lines of test equipment). They sell electronics parts over the counter but such are oriented to today's market of non-ham electronics...an area of personal experimentation and hobby activity that is larger and wider than any amateur radio activity ever was (proved by market money values and number of parts, kind of parts).

>Rather than continuing to restrict the availability of
>amateur equipment, as though we were selling assault weapons
>or recreational pharmaceuticals, I vote for opening up the market.
>Let's have radios for sale in the strip malls alongside the video
>games, Lionel trains, and mountain bikes. And it won't hurt if a
>few of us put on our Elmer-suits and lurk around to spot the
>likely recruits.

It will hurt much more to recognize that the electronics world has CHANGED...and folks of 30-something and under aren't impressed by less-than-tolerant old-timers who think that only amateur radio is "real radio," much less "real electronics." This isn't 1903 of spark and coherers or even 1933 with electronics design anchored by the vacuum tube.

When seniors to teenagers have color TV of many channels, computers with Internet availability (one in five USA house-holds have some Internet access), digital cameras (both still and motion picture), FAX terminals at drug stores, "walkmen" for AM/FM/CD private listening, pairs of FRS handhelds for less than $50, CB sets at K-Mart for less than $100, auto boom-rooms, boom-boxes for their rooms, wireless door chimes, wireless control of home lights and appliances, kits for do-it-yourself CCTV, all kinds of telephone appliances, and that ever-growing growth on pedestrian ears called a cellphone, they aren't all that impressed by "working DX with CW on HF."

Seniors to teenagers KNOW that radio exists, that it works not by magic but by simple controls. They've grown up with it, seen it used by public safety, utility, business people, have watched nearly-instantenous international TV news for decades, have used direct-dial telephones to communicate far away with

perfect clarity.

That hoary old paradigm from the 1930s of "working DX with CW on HF" is out of date, obsolete. There's absolutely no need of any amateur "National Traffic System" to cheat on Western Union's telegram charges when they can get on-line with the Internet and Instant Message someone or send e-mail.

Re-enactment of historical events, complete with costuming and other artifacts of that history time are popular with a few folks. Maybe the attraction could be there, of reliving the past, when radio was just beeping and very simple. Maybe the attraction could be (gasp) "having one's very own radio station!" Plonk down the charge card and walk out with "one's very own radio station," follow instructions packed within the boxes, and install it. Voila, the plonker is now an automatic radio expert, able to talk two ways without wires! Amazing. No one else in the neighborhood has that! Except maybe the folks next door with the little cell phone or cordless phone or all the neighbors with CBs in their cars (as well as cell phones and GPS locators and back-seat color TVs taking DVDs, perhaps a digital music broadcast receiver from a satellite).

Pardon me for messing up your corn flakes but isn't much of all this ham operating just the same thing as CB with a license? With higher power, of course, and a pretty certificate on the wall to proclaim a federally-certified radio merit badge holder who passed a virtual PhD-level test to get it...not to mention the state-of-the-art ready-built equipment whistling and ringing its bells in a "shack."

Well, there's the pioneering aspect. There's a meeting held on this new band near 5 MHz to assess results of recent testing there. Important to the rest of the radio world? The rest of the radio world was using that new spectrum spot back before WW2. Another item in this weeks ham radio news is the one-way LF record on 136 KHz...using a 60-second dot time on OOK CW. Real morse proficiency required there, yessir!

There be no new paradigms there, senior.

>toys. What are you implying?

Calm yourself. You know very well what is CW (Conventional
Wisdom) and PC (Politically Correct) to so many long-time

amateur licensees. They regard Citizens Band Radio Service
users as equivalent to swine, uncouth non-humans unfit to
inhabit the "amateur" 11 meter band (that disappeared in 1958).

>> Then when they finally decide to overcome the code obstacle, they've
>> already become molded into the kind of radio operator that we probably
>> don't want.
>
>Do we really want to go there?

That "there" has already been "gone to." You know very well
the "CW and PC" mindset of some long-timers. Acknowledge
what was publicly overt in here and move on.

>> I'd rather get them fresh.
>
>I'd rather get 'em interested.

Then attend devotions at the Church of St. Hiram and Spread
the Word. Emphasize getting newbies while teeners and
ignore the tens of thousands of today's radio professionals
above 18 and not yet licensed as amateurs.

Professionals don't have the mindset of the devoted Believer
in olde tyme hum radio, are not devoted to the Teachings of
Morse, and know what the rest of the radio world is about.
Some professionals have the temerity to express dissent
about olde tyme hum radio and are not beloved of beeping.
Can you "interest" them by constant denigration that they
are "inferior" or will not show proper CW/PC obediance to
The Correct Way in hamdom?

>Sorry if I wasn't clear, Dwight. We seem to be saying the same thing different
>ways. I agree that there are significant numbers of dropouts.
>
>The main point is that the growth in Technicians is due to three factors - new
>Techs, upgrades from Novice, and renewal of Tech Pluses as Techs.
>Counteracting this are dropouts and upgrades.

Prior to FCC 99-412 (the R&O establishing Part 97 restructuring, issued in December of 1999), the growth in US amateur radio licensees was primarily from the no-code-test Technician class. That growth was over a 9-year period.

The facts and figures were shown to you over three years ago and you then refused to acknowledge either the facts or figures as having anything to do with any code testing...yet the lack of necessary code test was so obvious that anyone trying to discount it was not arguing logically.

The persistent hue and cry from the PCTA regulars in here had a rationalization summarized by "just wait until renewal time (for those Techs) and you will see their numbers drop!" The first renewal period started and there was little drop-off of the continually-increasing Technician class numbers.

When Joe Speroni revised his website statistical tally to lump no-code-test Technicians with the old Technician Plusses, you went right along with that rationalization and discounting of the code test as having any influence...and refused to separate Technicians from Technician Plusses even though the FCC database clearly delineates between all classes. Note: Speroni is an obvious PCTA as indicated on his website.

As of time-now, you still insist on discounting any code test factor as influencing growth of the Technician class, "explaining" it as "Tech Plusses are renewed as Techs (if code test not taken)" or that no-code-test Technicians "upgraded." None of which explains the 9-year explosive (relative) growth of no-code-test Technician class numbers...which more than made up for the decrease in totals of US amateur licenses from the old other five license classes.

So far, on the basis of hundreds of past postings up to the time of this one, you've not shown any interpretive analyses which

are objective. They are all quite biased in favor of the code
test retention whether that is expressed overtly or implied.
The "interpretations" you make are subjective.

"Proficiency" in morse code has been defined by long-time
amateurs as what They tested to...namely greater than
20 WPM rate.

"First among equals" (literal translatin of Latin phrase) refers
to all the long-timer amateurs who keep telling everyone that
they are "first" when not telling everyone they are "superior."

>The no-code Tech ticket is available to anyone who wishes to
>become a licensed ARO without the "hassle" of the code, hence...no "barrier"
>to AR.

Of course, and all the no-code-test Technicians must ride in
the back of the privilege bus, not drink from the HF fountain,
and be the subject of ridicule shoveled on them by long-time
amateurs due to their "inferiority."

>> This browns off the PCTAs no end since they desperately
>> need to regain their self-imposed titles of "King of the Hill"
>> in the OLD class structure of US ham radio.
>
>What's a PCTA?

Pro-Code Test Advocate. The opposite of an NCTA or No Code
Test Advocate.

Those two acronyms have been in use for at least four years in
here. You are just now asking what it means?!?!?

Dave Hall <nojunk_n3cvj@worldlynx.net> wrote:

> Why twisty, resorting to changing your nic now? No one else would defend
> you to that level.....

Dave, are you really that stupid, or are you just trying to help Douglas W. Adair N8WWM live down his own violations on the Rain Report so he can get back to crying about CB rule violations, posting gay porn binaries, pedophile fantasies, running BI>20 spew attacks on rec.radio.cb and forging Twistedhed to all groups in the rec.radio hierarchy with fellow net-abuser and outcast Leland C. Scott KC8LDO?

In any case, instead of defending Twistedhed, I merely pointed out that Douglas W. Adair N8WWM appears to enjoy writing original pieces featuring children, specifically boys, and gay sex. It's not like this is the first or even the second time Adair N8WWM has written original pedophilia songs.

Why are you, Dave Hall, so eager to defend Douglas W. Adair N8WWM from having his pedophile fantasies exposed and disseminated? Are you sympathetic to pedophile fantasy writers, assuming N8WWM hasn't -yet- raped children? Are you frightened that Adair will call you a "traitor to amateur radio", as he did the late Richard McCollum N BK, if you don't support his insane, abusive behavior? Does Twistedhed drive you crazy enough to support Doug Adair N8WWM who regularly uses the kind of "gutter language" you've spoken so vehemently against, Dave?

Your hypocrisy is positively shocking, Dave Hall N3CVJ.

The most likely explanation for your brainless follow-up is that you're just one anti-twistedhed k00k defending another. Appropriate groups added. When malicious clowns like you are involved, Dave N3CVJ, it's hard to tell, but I'm willing to explore it at length with you.

Regarding your baseless assertion that I am "twisty" under another "nic", one needs only to be able to read to realize that his posting style and mine are quite different. You obviously consider yourself quite intelligent, regardless of the fact that you're actually a blinkered, intellectually myopic hypocrite. Can't you at least read well enough to see the difference, Dave?

I've restored the post in question below my comments. Read it closely and decide whether your bitterness over being clobbered in debate after debate is worth defending a federal outlaw, homosexual stalker, racist and pedophile fantasy writer like Douglas W. Adair N8WWM just because he, too, is obsessed with "twisty".

Here are a few quotes from the ignorant, hypocritical racist pedophile fellow no-code ham radio hobbyist you're backing, Dave:

"Live like a nigger, die like a nigger."

We are saying the same thing, Jim. The whole point of my message was to draw attention to the number of dropouts (especially the Tech and Tech Plus license holders).

> The main point is that the growth in Technicians is due
> to three factors - (snip)

But I didn't say anything about the growth in Technicians. My only mention of Techs was the fact that some must have upgraded, suggesting even greater losses for the Novice and Tech Plus in my "oversimplified" model. ;)

I fully intend to operate where the FCC permits me to operate just as
I've always done and as I have done overseas under the jurisdiction of
foreign governments. I fully intend not to use a lookup table for each
DX QSO or to check the FCC database for domestic QSOs.

Other amateur stations need to worry about their own operations as they
are responsible to their regulatory agencies.

I believe you'll find that my view is essentially the same as it was
before.

With your attitude toward ham radio it's tempting to say, damn shame you weren't. No one posting here is more petty than you.

Indeed. As the code test requirements are eased, the growth goes down. Of
course correlation is not causation.

If 5 wpm is the maximum Morse speed a person can do, regardless of
circumstances, I would not call that person "proficient".

Was that not clear from what I wrote?

It's not a put-down to describe such skills as entry-level.

The Morse test only requires either one solid minute out of five or correct
answers to seven of ten fill-in-the-blank questions. Nowhere near perfect copy
is required to pass.

Because such definitions are so self-evident as to be unnecessary.

Fun fact: The W6 version of Kim's call has been held by the same person since at least 1979. The holder's first name is Michael, which implies a male but doesn't prove it (remember actress Michael Learned?).

Ah - now I see your point.

But what is a reasonable dropout rate, given the various demographics
of today's hams? For example, I know quite a few local hams who got
started in amateur radio in the 80s as a retirement activity. Those
folks are now in their late 70s and early 80s. Sadly, some of them are
no longer with us.

Also, how does the dropout rate correlate to license class?

> Of course, and all the no-code-test Technicians must ride in
> the back of the privilege bus, not drink from the HF fountain,
> and be the subject of ridicule shoveled on them by long-time
> amateurs due to their "inferiority."

Of course...NOT. No riding in the back of any bus, no code and no-code
fountains, and certainly no ridicule...just a string of approx. 130
characters from a pool of 43 sent over a 5 min. period from which one must:

a) Correctly identify 25 in a row. (Nos., prosigns, and punctuation count as
2, BTW.)

or

b) Answer 7 out of 10 fill in questions re. the aforementioned characters.

Now if you want to debate the "inequality of the system" just for the sake of debate, fine. But if you can truly say that the 5-wpm constitutes some sort of "barrier" to AR, I think that's pretty lame. It may be just a hobby to some, but it's a hobby that is facilitated via "privileges" granted by the federal gov't. Those privileges are earned. Wanna get on HF...just do it.

> Prove it, Len. Show us your evidence, argument and conclusions.

I have a 1993 "winged horse" Callbook. It says that at time of
printing (late 1992) there were ~185,000 Technicians - code-tested and
and non-code-tested. No differentiation in the totals.
>
> The facts and figures were shown to you over three years ago

Where? By whom?

> and you then refused to acknowledge either the facts or figures
> as having anything to do with any code testing...

Incorrect.

> yet the lack of
> necessary code test was so obvious that anyone trying to
> discount it was not arguing logically.

You are making the classic error of assuming your conclusion, Len.
You're saying that anyone who disagrees with your conclusion is not
logical simply because they disagree. I point out errors in your
arguments, that's all. Like your assumption that all Technicians are
not code-tested.

Show us your facts and figures and let the readers decide.
>
> The persistent hue and cry from the PCTA regulars in here had
> a rationalization summarized by "just wait until renewal time
> (for those Techs) and you will see their numbers drop!"

That "persistent hue and cry" was by some folks, but not by me. I challenge you to come up with a single post of mine where I predicted anything about renewal percentages of Technician-class hams vs. other classes of license.

You lump all those who disagree with your faulty arguments as "PCTAs", and act as if we are all the same. We're not.

> The
> first renewal period started and there was little drop-off of the
> continually-increasing Technician class numbers.

Show us some figures to back up that claim. Be sure to compensate for the fact that all Technicians in the database are not necessarily non-code-tested.
>
> When Joe Speroni

The current license totals I post semimonthly every two weeks do not come from the AH0A site.

> revised his website statistical tally to lump
> no-code-test Technicians with the old Technician Plusses, you
> went right along with that rationalization and discounting of
> the code test as having any influence...

Incorrect. I do not know AH0A, have never even emailed him.

And the numbers I post here semimonthly DO separate Techs and Tech-Pluses. So you are incorrect again, Len. Mistaken. Just plain wrong.

> and refused to separate
> Technicians from Technician Plusses even though the FCC
> database clearly delineates between all classes.

Incorrect. I do not know AH0A, have never even emailed him.

And the numbers I post here semimonthly DO separate Techs and Tech-Pluses. So you are incorrect again, Len. Mistaken. Just plain wrong.

> Note: Speroni
> is an obvious PCTA as indicated on his website.

Does that mean his numbers are not accurate? What numbers would you have us use?
>
> As of time-now, you still insist on discounting any code test
> factor as influencing growth of the Technician class, "explaining"
> it as "Tech Plusses are renewed as Techs (if code test not
> taken)" or that no-code-test Technicians "upgraded."

Then explain to us why the growth of the US ham license totals from 1990 to 2000 was virtually the same as the growth from 1980 to 1990.

Explain why the percentage growth dropped after 1990. Also explain how you know what the growth would have been without the 1990 and 1991 changes.

> None of
> which explains the 9-year explosive (relative) growth of no-code-
> test Technician class numbers...which more than made up for
> the decrease in totals of US amateur licenses from the old other
> five license classes.

Show us some numbers, Len. Show us all the license classes and how their totals have changed from, say, 1970 to the present, to back up your claims. Be sure to separate code-tested from non-code-tested Techs from 1991 onwards.

Jim, N2EY

Acknowledged and movin' on...

> >> I'd rather get them fresh.
> >
> >I'd rather get 'em interested.
>
> Then attend devotions at the Church of St. Hiram and Spread
> the Word.

Why is it that those who "advocate" (From my new acronym, PCTA. ;-)) Element
1 testing must be devotees of a holy CW church? I'm just a relative newbie
who wanted to get on HF, found out what needed to be done...and just did it.
Forget CW's virtues for a moment. Whether or not I planned on using CW or
not...it's far easier to just do it than whine about it. The truth is that
they don't sell a multi-choice Q & A pool for Element 1 and that frightens
the crap outta many folks. Witness this:

KN0WCW de WA2SI WA2SI, t_x fer c_ll BT ur _89 BT n_m_ i_ jo_n. ri_ i_
ken_o_d _ith 3 el_m_n_ _agi. qt_ is...and so on.

There's the monster. With a minimal amount of study and concentrating more
on the six required prosigns along with the numbers (They're patterned.
BTW.) simple common sense get's you through this grinning like a Cheshire
cat! Even if you muck up both callsigns, there's still a string of 69
characters in the example above. A little common sense will net you 25 in a
row very easily.

THIS is the target of an entire organization...on an international level?!
Puh-lease...entirely underwhelming.

> Emphasize getting newbies while teeners and

> The Correct Way in hamdom?

Give it some more thought. I thank god that my 5-yr. old is not old enough
to whine about anything other than an extra 1/2 hr. of Nickelodeon at night.
When we sit down for our 15 mins. of code after her homework, it never
occurs to her to whine about it. It just gets done.

Right from the get-go, day one? ;-)

Just a handy tool, Dan. Not a substitute.

I tried to say, "It looks like your left hand is getting a workout."

Are you in disagreement
> with something I've written?

Nooo. Not me.

> Do you maintain that Len is already a ham?

I maintain a lawn and several vehicles. I have no time for
maintaining Len as a ham.

> Do you not think that five words per minute represents a plateau to
> him.

No. A plateau indicates that he has achieved 5WPM, and cannot go any higher. Instead, I think it represents a barrier to him.

> Do you think he has already achieved 5 wpm?

No.

> Dave K8MN

Dave, had you simply wished him luck in getting to 5WPM, that would have been a compliment. But you just had to continue on and call 5WPM a "plateau." That's being smug, and that's where you used your left hand again.

> Also, the word "A N I M A T E".

Since you brought it up. These are her current practice words.

IT, TEN, NET, TAN, TIM, NATE, TEAM, MEAT, MET, MITTEN (She always has
problems with this one though.), EAT, ATE, EATEN (Another problem word.),
and ET. (Like ET go home.)

What we do is practice for about 15 mins. after we work on her
reading/writing homework. It's long enough to stick and short enough not to
bore her...plus it's a game to her. She'll then have the option to forget
the code as opposed to having to learn it at a later date. I won't lie, it
helps me too as I have precious little time these days between two jobs. (A
recent development...but a good one.)

And you're famous for being smugly -superior- in all of your posts.

Back to your silly assertion that the "desire is to go v e r y
s l o w l y."

Why is it important to you that all amateur communications go quickly?

We all don't communicate our information at double-time, do we?
Different people speak at different speeds, and different people beep
at different speeds. I'm sure you'd gladly slow down to 5wpm if it
were a band/county you needed.

If you have no desire to communicate, find a different hobby.

> > > Would you call a driver who can safely drive a car at speeds no higher

> >
> > This is an amateur radio topic newsgroup. Would you mind containing
> > your comments to amateur radio?
>
> I thought perhaps you'd understand an analogy.

If you insist.

After reviewing the Ohio Revised Code I find that there are some roads
where there is a requirement to confine your rate of travel between a
minimum and maximum speed. Highways are such places. Additionally,
there is a requirement to affix an orange triangle to vehicles that
move at rates much slower than the posted maximum.

I see no minimum or maximum rate of Morse speed in Part 97 for
operations. In fact, Part 97 neither defines Morse Code, nor does it
indicate how the speed is computed. Ditto all of Title 34. Yet
something beeping must be examined at a rate of 5WPM, and 13-15WPM
exams are permissible.

Yours was not a particularly good analog.

> > Would you call someone

That's an awful lot of money for a kid. I was lucky to get a bicycle.
My older brother and sister weren't as lucky. I did earn enough to
buy an alarm/clock radio which I used for night time broadcast band

dxing. Lots of fun. I even kept a log of stations heard, times, and
which way my radio was oriented when it sounded best. And I sold
flower seeds door to door, until the authorities put an end to that
(no soliciting), but not before I earned enough for a South Bend
fishing rod.

I had
> competing interests too. I found a way to pursue all of those.

Easy for you. You're superior.

> > I often wonder had I been exposed to the pettiness of

My chip is on my motherboard, not my shoulder. I did see a commercial
where this guy put a battery on his shoulder and dared someone to
knock it off. I didn't get that one. And there was a sailor that had
a bird on his shoulder. That was pretty cool, too.

But this is an amateur radio newsgroup and we're straying off topic.

Then you do intend to contact stations that you have a priori knowledge are operating out of band.

I thought so.

Your attempt at cuteness falls short. Read the part "that Len is
already". It is the one which dooms your effort at word play.

> > Do you not think that five words per minute represents a plateau to
> > him.
>
> No. A plateau indicates that he has achieved 5WPM, and cannot go any
> higher. Instead, I think it represents a barrier to him.

We have no way of knowing if it is a barrier to him. He has never even
attempted a license exam which includes a 5 wpm morse test.

> > Do you think he has already achieved 5 wpm?
>
> No.

I don't think he has either. But he told us that he "knows" morse code.

Oh, smugness is a left-handed thing is it? I did not intend to
compliment Len.

I, for one, have never worried about Kim's callsign. I just point out
that her choice was tacky and in poor taste.

I didn't have an assertion that there was a desire to go very slowly.
You must have missed the word "unless".

> Why is it important to you that all amateur communications go quickly?

It isn't important to me at all. We were talking about proficiency of
one whose top sending and receiving speed is five words per minute.

> We all don't communicate our information at double-time, do we?
> Different people speak at different speeds, and different people beep
> at different speeds. I'm sure you'd gladly slow down to 5wpm if it
> were a band/county you needed.

I'm sure I'd slow down too but my maximum speed isn't five words per
minute.
I'd be happy to listen to your definition of "double time" as it applies
to communications. Would you have us believe that morse communication
at ten words per minute is double time?

> If you have no desire to communicate, find a different hobby.

I'm communicating fine, Brian. As the term applies to amateur radio, I
have all of the available bands and band segments along with a number of
modes open to me. My comfortable morse speed is at least seven times
five words per minute.

> > > > Would you call a driver who can safely drive a car at speeds no higher

That's all eyewash. It does not apply to the analogy I stated. You
didn't answer the question. Would you call such a driver "proficient".

> I see no minimum or maximum rate of Morse speed in Part 97 for
> operations. In fact, Part 97 neither defines Morse Code, nor does it
> indicate how the speed is computed. Ditto all of Title 34. Yet
> something beeping must be examined at a rate of 5WPM, and 13-15WPM
> exams are permissible.

I don't think you'll find "something beeping" in Part 97. Your
statement is additional irrelevant fluff since none of that addresses
proficiency.

> Yours was not a particularly good analog.

I think you mean that you didn't like it because you can't counter it.
Care to provide an answer?

> > > Would you call someone

Sure it was. I got up at 4:30 every morning to deliver newspapers for a
time. I made about ten bucks a week doing so. I later wrote two sports
columns per week (at age fifteen) for the local paper and worked a
couple of days after school (and on Saturdays) at a hobby shop. I didn't
make great money but I made money. Some of it was spent on amateur
radio equipment.

> I was lucky to get a bicycle.

Recipe For Pastor Gab's Ham Scam with Mixed Nuts, or; How to Earn a Meagre living from your Radio Hobby

-Combine equal parts of ARnewsline, RAIN, and ARRL News
-Add a stupid children's story
-Add one stolen voice ID
-Lie to interviewees about your own importance
-Add one conspiracy theory regarding spectrum theft
-Finely craft conspiracy theory to include FCC Corruption
-Add one hint that ARRL is becoming obsolete
-Add one or two PC causes (to attract liberal donors)
-Add phony concern about off-color language
-Pretend you did something worthwhile at one time
-Pretend you own the frequency you transmit on
-Season liberally with defamation and false accusations
-Garnish with oblique references to ARRL Directors

Variations:
-Paranoid Hate Speech
-Felony Affadavit Complaints
-Pyramid schemes involving membership sales

Combine ingredients. Set Radio Shack timer for 128 hours. Serve to naive listeners on 80 and 20 meters over a weak and distorted 30 year old transmitter.

Send leftovers to foreign militias (preferably brutal and anti-democratic) They need to eat too!

Probably delicious over Shortwave, but use caution as license revocation will result if served over Amateur Radio.

NB: Don't try this at home! Any resemblance to currently licensed Amateurs is entirely coincidental.

Satire:
1: a literary work holding up human vices and follies to ridicule or scorn
2: trenchant wit, irony, or sarcasm used to expose and discredit vice or folly

```

I didn't miss the word "useless" which is what every post of yours ends up being.

Get back to me if you have anything useful.

Then you agree that you don't know what a plateau is? Or at least you

Just got a copy of the new league book "Experimental Methods in RF Design" ($49.95). Already found 3 new ideas for a receiver project I'm doing!

Anyone even a little interested in doing their own design work should pick up a copy.

>
>> Why is it important to you that all amateur communications go quickly?
>
>It isn't important to me at all. We were talking about proficiency of
>one whose top sending and receiving speed is five words per minute.

Proficiency at any rate is measured by accuracy.

The very recent (see Newsline) 136 KHz distance v. power
record was set with a dot period of 60 seconds.

>> We all don't communicate our information at double-time, do we?
>> Different people speak at different speeds, and different people beep
>> at different speeds. I'm sure you'd gladly slow down to 5wpm if it
>> were a band/county you needed.
>
>I'm sure I'd slow down too but my maximum speed isn't five words per
>minute.

Obviously...you've defined 5 WPM as "mediocre." Since you
are self-defined as "superior," your rate must be much higher.

>I'd be happy to listen to your definition of "double time" as it applies
>to communications. Would you have us believe that morse communication
>at ten words per minute is double time?

Amateur radio is defined as a radio activity without pecuniary
interest. "Double time" is the phrase for overtime payment at
twice the normal hourly rate.

>> If you have no desire to communicate, find a different hobby.
>
>I'm communicating fine, Brian. As the term applies to amateur radio, I
>have all of the available bands and band segments along with a number of
>modes open to me. My comfortable morse speed is at least seven times
>five words per minute.

With that proficiency you will be in great demand in the
commercial world should an emergency require additional
skilled morsemen to operate the many OOK CW radio
circuits worldwide.

>That's all eyewash. It does not apply to the analogy I stated. You
>didn't answer the question. Would you call such a driver "proficient".

Herr Robust, no one in here is required to answer Your questions
on vehicle traffic safety or the Ohio state highway system.
Please confine your smuggness to amateur radio policy topics.

>> I see no minimum or maximum rate of Morse speed in Part 97 for
>> operations. In fact, Part 97 neither defines Morse Code, nor does it

>> indicate how the speed is computed. Ditto all of Title 34. Yet
>> something beeping must be examined at a rate of 5WPM, and 13-15WPM
>> exams are permissible.
>
>I don't think you'll find "something beeping" in Part 97. Your
>statement is additional irrelevant fluff since none of that addresses
>proficiency.

The reference is to equivalent morse code rate. As presently
defined by the FCC, there is no real explicit definition for morse
rate used on US amateur radio license tests. There was a
separate statement by the FCC that allows VEs to use 15 WPM
character rate at a 5 WPM word rate (so-called "Farnsworth"
method) yet there is no specific, explicit definition of word rate
using International Morse Code.

That was all debated in here some time ago. Move on. Do not
dwell on your virtual injuries received here years ago. Heal.

>> Yours was not a particularly good analog.
>
>I think you mean that you didn't like it because you can't counter it.
>Care to provide an answer?

Herr Robust does not provide good analogies. Witness the
"ball game" and "checkers" analogies recently...and several
other fluffy analogies archived in you-know-where.

>> > > Would you call someone
>> > > > who can play "Stardust" perfectly but only at half its normal tempo,

>The FCC doesn't think you're in the dark or the FCC thinks Riley doesn't
>know?

Riley Hollingsworth is a "special counsel" to the FCC. That title
refers to what is essentially a temporary hire or a "consultancy"
equivalent. He is not in the regular Wireless Bureau staff list
(what you may think of as a "key list").

The FCC has stated in 1990 (see 90-53) and 1999 (see 99-412)
that morse code testing is of no value to them in determining if
an applicant should be granted a US amateur radio license.
That public statement is found at the FCC, not Google.

Try to stay focussed.

Well, our freezer isn't big enough to "maintain" a whole ham.
:-)

>> Do you not think that five words per minute represents a plateau to
>> him.
>
>No. A plateau indicates that he has achieved 5WPM, and cannot go any
>higher. Instead, I think it represents a barrier to him.

It represents an unneccessary requirement for a US amateur
radio license, any class. The FCC agrees with that viewpoint.

>> Do you think he has already achieved 5 wpm?
>
>No.

Actually, yes, roughly 8 WPM equivalent rate...long ago. :-)
It evaporated with lack of use, interest, and necessity.

The high-collared colonel keeps confusing "interest in radio"
with "getting an amateur license." He constantly maintains
that one absolutely must have an amateur radio license to
just talk about amateur radio...not realizing that the FCC
does not require such a license to make regulations about
US amateur radio.

The colonel keeps flashing his twin lightning bolts (ornaments
on that high collar) insisting and insisting on certain
"requirements" which are really those he was able to achieve.
By association, those achievements are held up as some
kind of role models for others to reach...to be as good as He.
In simpler words, whatever the colonel did is what others
must do...by his standards of excellence. <shrug>

>> Dave K8MN
>
>Dave, had you simply wished him luck in getting to 5WPM, that would
>have been a compliment. But you just had to continue on and call 5WPM
>a "plateau." That's being smug, and that's where you used your left
>hand again.

As the old saying goes, "different strokes..." :-)

You are supposed to call such individuals "mediocre." Haven't
you read the "sneer-macht" official bulletin board outside the
ARS Hq? Das oberst wrote the orders.

>Was that not clear from what I wrote?

You haven't been fully Googled yet.

>It's not a put-down to describe such skills as entry-level.

A "put-down" is a "put-down."

>The Morse test only requires either one solid minute out of five or correct
>answers to seven of ten fill-in-the-blank questions. Nowhere near perfect
>copy is required to pass.

Well, that pretty much "nails" an opinion of yours that
morsemanship is an absolute essential for US amateur
radio licensing, doesn't it?

[thanks for the keg of nails, Brian, came on the plane today...]

>>> And the sending test disappeared in the USA about 20 years ago.
>>
>>For all Morse exams regardless of speed, not just the 5wpm exam.
>
>Was that not clear from what I wrote?

No. It was not accompanied by the appropriate gut-and-paste
from Google.

>>> The stated goal was elimination of the Morse proficiency test. That's been
>>> accomplished in the USA, because the remaining test is a basic skill test,
>>> not a proficiency test.
>>
>>Really?
>
>Yes, really.

Tsk, tsk, tsk, the constant statement of NCTAs in here was the
elimination of the morse code test for any US amateur radio
license examination. The sudden introduction of alleged
"proficiency" was due to the over-heated imagination of some
PCTAs.

>>Is that in Part 97? All of Title 34?
>
>You tell me where the term "Morse proficiency" appears in those documents.

You must show everyone through the appropriate Googling.

>>The rules don't even define what Morse Code is, let alone what are
>>basic skills or proficiency.
>
>Because such definitions are so self-evident as to be unnecessary.

Oh, dear, allusions to book-burning since dictionaries are no
longer needed. Phil can toss his "Black's" for an example.

We can all forget about other requirements, particular technical
requirements because most of those are "so self-evident as to
be unnecessary?" Apparently, yes in your mind, since you
go into the usual "self-evident" song-and-dance on the basis of
your personal concept of amateur radio. Tsk, tsk, tsk, not good
law and Part 97 is not a Declaration of Independence and you
are not a Thomas Jefferson.

The FACTS of the FCC's definitions of morse code and word
rate have ALREADY been discussed in here and found faulty.
The resident newsgroup counsel pro (Bono/U2) stated that it
"wasn't worth the hassle" to contact the FCC for a correction
of Part 97. Please quit trying all the necro-equine flaggelation
on morsemanship definitions and do your Googling.

>We both know that's incorrect, right?

No. I've heard the CW-PC shouting and hollering from amateur
licensees for 45 years. Their QRM pervades discussion to this

>THIS is the target of an entire organization...on an international level?!
>Puh-lease...entirely underwhelming.

Absolutely...and NOT "underwhelming." There's been NO
logical need for morsemanship in amateur radio for years,
only the insistence of old-timers that such skills MUST be
achieved...to fit the old-timers' quaint ideas that amateur
radio skills of long decades ago MUST be preserved in a
sort of living museum of the airwaves.

Have you seen what the FCC stated publicly in 1990 and
in 1999 on their need for morse code testing? I can pull
those without once Googling if you need an update.

>> Emphasize getting newbies while teeners and

>> The Correct Way in hamdom?
>
>Give it some more thought.

No. The subject of morse code testing has been considered
here for over 50 years...which included actual operation on HF
in communications (as well as other EM places forbidden to
US amateurs).

The "necessity" for a morse code test boils down to a simple
turf thing of old-timers having to test for morsemanship,
therefore everyone else must do the same. Illogical, personal,
emotional reasoning. Stubbornness. Turf things because

they made it and now claim ownership over who can do what
or who can discuss laws.

The FCC determines who gets an amateur license and the
attendant "title" of a callsign that hams love to write behind
(or in lieu of) their name.

>I thank god that my 5-yr. old is not old enough
>to whine about anything other than an extra 1/2 hr. of Nickelodeon at night.

That's nice...you now equate newsgroup opponents as
children?

The so-called record of the world's youngest ham was made
in 1998 by a four-year-old who passed a Novice class license.
If you wanted to get all snarly, I would remind you that age 5
is a year late compared to that male black child of the record.
But I don't like to get folks all lathered up about recent
events, so I won't do such reminding.

Do you need information on Nickelodeon? They are on Olive
street in Burbank, just across from Community Chevrolet.
Very distinctive front of their main building. I am acquainted
with two adults who work there.

>When we sit down for our 15 mins. of code after her homework, it never
>occurs to her to whine about it. It just gets done.

That's nice. Quality time with your children. Instill the Proper
Virtues and the progressive Amateur Way that morsemanship
is the epitome of all amateur skills.

You are welcome to call all opponents of your viewpoints
"children" and dismiss them as unworthy by describing
their opposition as "whining." You can even falsely extend
your complaints received later as "an insult to your kids"
in a snide misdirection. That is commonplace in computer-
modem communications...but still misdirection.

You have an alternate to later replies to your "childish whining"
charge - You know better. [always a popular choice] This
states that opponents are truly unworthy of your magnificent
statements of clarity and logical thought.

There are any number of misdirections and statements of
superiority through tenure, class, callsign, etc. which can be
used in your replies. See what others use. [Google away]

Do not expect all the charges of childish whining to be received
in good humor...

So?

I DID grow up near Cleveland, OH. AES in Wickliffe and Fair Radio out in
Lima DID have coffee pots and there were, from time to time, "tenured" Amateurs
who were willing to "help the kid".

Sorry your experience wasn't as satisfying.

>I recall only one "ham club" in the home town but there were
> no "Elmers," rather some OFs and WW2 veterans who had
> a like of strong drink..."beer can vertical" parties were a big
> "six-pack" adult thing that never resulted in stable or viable

> That seems to have been a geographic localized thing.
> In the late 1940s "small towns" of 80K population had firm,
> fair-trade prices on ready-built equipment or one ordered
> out of the Allied or Newark catalogs.

It was a late 1960's and 1970's thing too. I remember quite a few days
spent at Metropolatin Atlanta Amateur stores. One was "ZZZ" Electronics near
85 and Buford Highway. Spent a lot of days around the coffee pot there.

>The only "coffee pot" in a ham store I've encountered is the
> local HRO...a Mr. Coffee appliance apparently made during

> never had such, nor did Electronic City in Burbank. Retail
> stores seem (oddly?) bent on SELLING, not acting as
> "Elmers" or club surrogates.

Whew. More BS. I spent a lot of time drinking coffee at Henry's both in teh LA store and the old one in Anaheim. Dated one of the Henry's daughters (Mary) in 81 or 82. Spent time with Stuart, KB6GS at the LA store where, upon request, a cup of coffee was had by all.

Only went to Jun's once or twice...Never went to "Electronic City".

>Of course, I'm a relative newcomer, you understand, moving to
> L.A. area in 1956 and owning this present house for 40 years.
> I've been to NYC's fabled "radio row" in 1952 and found it not

That's nice. Did you order from amazon.com and get free
shipping at the same price? :-)

>Anyone even a little interested in doing their own design work should pick
>up a copy.

Why the imperative of "should?" What is in that $49.95 book
that compels its purchase (which is equivalent to two pairs
of FRS handhelds or a nice night on the town for two)?

I'm still interested in design work even after four decades of
doing that for a living. Still doing it for myself. Why the
promotional blurbing when ARRL has plenty of advertising
already out there?

You post has appeared simultaneously in this newsgroup,
rec.radio.amateur.misc and rec.radio.amateur.homebrew.
There are several other rec.radio.amateur newsgroups.

Will that book enable four-year-old licensees to build their
own RF thingies all by themselves? Will everyone reading
the book learn how to whittle their own ICs out of wood?

What is IN the book? Use generalities if you can't use
specifics. Humor us. Does it have projects using Amish
rake portable antennas? The Amish wish to know!

> proficiency.

Thank you, Captain Obvious.

Here's a question: what makes anyone critical of current AR testing standards (either the written and/or code requirements) think that the 5 WPM code requirement for HF privileges is going to keep those interested in the mode from ever being proficient at a higher speed? Do they really think that anyone that's interested in doing CW, and is actively pursuing communication using this mode, will be forever stuck at 5 WPM, just because that's where they started out? Doesn't that sound stupid? Well, of course it does. Keep hammering on that nail-- if all's you carry is a hammer, everything begins to look like a nail.

Generally speaking (speaking from the point of a new General licensee, that is) five words per minute only demonstrates that one is a beginner, like me. I don't claim proficiency at any speed above 8 WPM. But, proficiency is not a matter of speed, unless one does not care to have a code QSO with some slow beginner like me. I am proficient in code at around 8 WPM-- *because I'm a beginner*. If I keep doing CW and having conversations using the mode, then I'll get faster and better at it.

DUH!! That principle goes for just about everything, does it not?

How many times does this need to be pointed out to the OF's? Let me restate it for those who're slow on the uptake because their thought processes are constipated by prejudice against new ops and forever soured by the "lowering of standards" (i.e., "any less tough than I had it"): people who do slow CW are generally BEGINNERS, or they could be someone who hasn't been into CW for awhile and who is now rediscovering the mode.

Attitudes such as the one displayed above-- "Just in case your accuracy is thrown off at the breakneck speed of five words per minute, of course. Five words per minute doesn't demonstrate proficiency" -- do not help anyone, and as such only serve to foster resentment and perpetuate a negative attitude towards not only the mode, but also towards those who really like to use it. I used to think to myself, good lord, what sort of communication mode could possibly cause so many people to have such freaking blue-in-the-face hissy fits and cause so much strife among licensed AR operators?

I have concluded that it's much, much less about the communication mode of CW itself and much more about the piss-poor attitudes of those who feel that

utter proficiency in CW makes for the best operators, or that testing in mode should be done away with because of the "outdatedness" of CW. With this sort of vehemence coming rapid-fire from both ends, the innocent (read: AR newbies) tend to be caught in the path of fire. Older ops are disgusted by the "lowering of standards" (which newbies had no control over); anti-code types are absolutely frothed at the mouth over having ANY code tests. New ops become ticked off by the collective attitude problems of both sides, and they end up deciding that it *must be CW itself that is the problem*. Pity, that. This ongoing argument continually divides, slices and dices this community over and over and over again.

Those getting into AR when they do have to deal with the standards of their times. I only knew that the code speed was 5 WPM to pass when I was tested. I just did what was required of me to get my foot in the door of the HF bands, and upward I go from here.

I will maintain that even if the tests were so much harder "back then" and the code test so much faster, it's irrelevant to us newbies. People can complain till they are out of breath about how the standards have slipped and how new operators are lacking in proficiency, but these complainers were all beginners at one point too. Perhaps time has dulled their memories. It's 2003, folks. The times, they are a-changing, in the words of one famous singer/songwriter. If you don't like change, then stick with what you know and like, and quit chewing on the rest of our collective butts for not liking the same things you do. Meanwhile, EVERYONE who has a voice in the code/no-code matter should make their feelings known to the powers that be, because I believe that the fate of the code test will eventually be decided by the majority.

As far as proficiency in CW goes, it's simple. If someone wants to be good at something, they will put forth the time and the effort and, as such, practice will eventually make them a lot better.

>
> I DID grow up near Cleveland, OH. AES in Wickliffe and Fair Radio out in
>Lima DID have coffee pots and there were, from time to time, "tenured"
Amateurs
>who were willing to "help the kid".

Of course you did...why those businesses did nothing else but
sit around the pot-bellied stove in the back, slurping coffee,
and impressing the kids with tales of radio derring-do and
other do-do. Oh, my!

> Sorry your experience wasn't as satisfying.

Noooo...you are NOT sorry one bit, Forest Grump. :-)

> Of course the obligatory suggestion that Amateurs are drunkards and
>incompetent. Wouldn't be a LennieRant unless there was one, I guess.

> It was a late 1960's and 1970's thing too. I remember quite a few days
>spent at Metropolatin Atlanta Amateur stores. One was "ZZZ" Electronics near
>85 and Buford Highway. Spent a lot of days around the coffee pot there.

Of course you did, Forest Grump.

"Life's lak a can o' coffee...ya don't know what's in da bean."

> Whew. More BS. I spent a lot of time drinking coffee at Henry's both in
>teh LA store and the old one in Anaheim. Dated one of the Henry's daughters
>(Mary) in 81 or 82. Spent time with Stuart, KB6GS at the LA store where,

>upon request, a cup of coffee was had by all.

Of course you did! If you wrote it in here it must be true,
right, Forest Grump?

Was "Mary" impressed by your mighty monopole "antenna?"
Was it olive-green in color and marked "USMC?"
Was that between wives or during a marriage?
Was "Mary" impressed by your tales of Hostile Action
Heroism?

How about that...most folks think that Henry Radio was started
by someone whose surname was "Henry." In that case, the
words "Henry's daughters" is incorrect. Hard to tell with
mixing of given and surnames.

But, I'll bet you knew Monterey Jack personally, eh?

> Only went to Jun's once or twice...Never went to "Electronic City".

Oh, my, not one mention of visiting the Burbank HRO! Tsk, tsk,
tsk. You DID visit that one (with their over-cooked carafe), didn't
you? It wasn't far at all to Electronic City from that HRO. You
missed the vast parking lot at Electronic City? How could you
fail to notice?

>>It will hurt much more to recognize that the electronics world
>> has CHANGED...
>
> Too bad you're not an active part of it, Eh, Putzy One?

Tsk, tsk, tsk, Forest Grump, I am still an active part of the
electronics industry in the southland. I'm just not working
the regular hours of the "employed." Contractural work is
like that. :-)

>>That hoary old paradigm from the 1930s of "working DX with
>> CW on HF" is out of date, obsolete.
>
> Then why do YOU keep reciting it, Sir Scummy?

Poor Forest Grump, didn't find a coffee bean to your satisfaction?

All you hoary old-timers seem to think of nothing but HF as
"the ham bands" and expressing this devotion to DXing and
CW. See Roll, Heil, Miccolis, Carroll, et al., in here.

>>Pardon me for messing up your corn flakes but isn't much of
>> all this ham operating just the same thing as CB with a license?
>
> How would you know, Lennie? You are neither a licensee nor participant.

Haven't used either one of my CB transceivers in at least a
couple of years. :-) If I bother to listen to the "11m band" with

the Icom, most of what I hear is wall-to-wall heterodynes. If I bother to listen to the HF ham bands with the Icom, most of what I hear is the same sort of nattering that existed 9 years ago, 19 years ago, 29 years ago, 39 years ago when I listend from this same location. :-)

Well, to be honest...the use of "599" for ham signal reports has gotten more numerous with the years...barely discernable signals close to noise levels, too! :-)

>>There be no new paradigms there, senior.
>
> Nor in anything you've offered herein. Same usual denigrating stuff.
>Verbose, lacking substance or meaning. basically, TRASH.

Tsk, tsk, tsk, denial of the shifting target market in consumer electronics retailing! I thought ex-purchasing agents knew of the electronics market? No? Didn't learn anything at that modem and set-top-box factory for the short time you were there?

Business trends in electronics isn't "TRASH," little man Grump. It is reality. The "substance" of the shifting focus is found in the business sections of the larger newspapers, not in the magazines and website of ARRL. One projection for year 2005 total semi-conductor world market sales is a mere $210 Billion...not a lot of that targeted for amateur radio... [source Microwave Journal, next month's issue]

Ah, but don't let this stop you, Forest Grump. Run on down to your local Best Buy, CompUSA, Target, K-Mart, Good Guys, Sears, Kragen Auto Parts or Circuit City store and spend hours gassing in caffienated nirvana about all the ham radio equipment they have for sale. Don't forget to take your Amish rake with you. Have fun!

>end of it when I was on Guam Island.

"Humor?!?" :-) Ooooo...what a great lead-in...

If I repeat how and what I served my country in here, a
number of hostile action heroes (some of which never
served in any military branch) will grab their capes and
fly into action whining about "CVs," spritzing epithets
right and left. :-)

That particular book title is NOT about either "serving one's
country" or "providing emergency communications." Read
the message again in any of the three newsgroups it is
posted. Can you sense spam advertising for beloved ARRL
products? I can.

You want some honest answers about hobby design and
construction? Go to rec.radio.amateur.homebrew. So far
it is a mild place arguing not about "papers" or
"qualifications" but of actual design and construction.

ARRL has its own product advertising on its website and
publications. Hard to miss the ads for products there. As
far as I know, direct orders to Newington for products still
get a large extra shipping cost added to billing. Amazon.com
doesn't add shipping charges over total sell prices greater
than $25...including resale of ARRL products at no change
to ARRL-direct prices.

Oh, my, a non-descriptive chastisement from John Krac (whoever
that is)! Am I supposed to be "wounded?" Are you also a
hostile action hero?

A true ARRL lover would have launched into a description of contents
or at least a synopsis of contents in the best Madison Avenue style.
That wasn't done.

>You put the "OUCH" in Anal!

Calm down. Buckle up and drive someone else to distraction, boy.

Oh, my, were you admitted to a bar this afternoon and thought you had become a legal beagle? Arf, arf?

Strange words. According to the FCC, not to mention a couple of Acts of Congress (one in 1934, another in 1996), only the FCC created the class of the (no-code-test) Technician license. Not the US Congress. Not the ITU.

Since the FCC is chartered (by law) to regulate US civil radio, it MAKES the US civil radio regulations. Neither is the FCC "subordinate to Congress." FCC is not part of the Legislative branch of the US government. Tsk, tsk, tsk.

Better review US civics and government, Forest Grump.

> NOT individual FCC licensees, regardless of what Lennie tries to make it
>appear.

"Makes it appear?!?" :-) Have you been watching reruns of Rocky the Flying Squirrel on TV and think I am Bullwinkle? ["watch me pull a rabbit out of the hat!"] Tsk, tsk, tsk. :-)

"Len Over 21" <lenover21@aol.com> wrote in message
news:20030304193540.29447.00000603@mb-cd.aol.com...

> >If 5 wpm is the maximum Morse speed a person can do, regardless of
> >circumstances, I would not call that person "proficient".
>
> You are supposed to call such individuals "mediocre."

Most likely (as this thread is confined to the definition of someone who is proficient at 5 WPM in CW) such a person would be more accurately referred to as a "beginner".

Dave Heil, would you withhold your slapdash judgments long enough to allow for a beginner to have studied and learned the code well enough in about 5 hours over a four-week period to pass the mandated CW test? Hint: there are no extra "points" or higher license privileges awarded to beginners nowadays who can pass the code test at a higher proficiency speed, so it doesn't matter anyway.

Mediocrity is defined by Webster as: "of moderate or low quality, value, ability, or performance", which may well apply to beginners as judged by those who have had more practice in CW to become proficient. But I know of no one who starts out utterly excellent at any skill. The relevance of Mr. Heil's point here, if any, is utterly escaping me.

When I first came to this group, I thought I should read a good cross-section of the threads because I felt that I could probably get a sense of the key hot-button issues that hams were discussing in a relatively unrestricted environment. But seeing the two names of "Len Over 21" and "Dave Heil" prattling endlessly over certain threads on r.r.a.p. reminds me of some big-top billing of two midgets mud-wresting in some tawdry circus act... in other words, stupid, offensive, degrading and utterly pointless. Bye now, you two have fun.

Jackie

I'll think about answering your question when you show some civility and
when you answer the questions N2EY and I have both asked about your
Somali "operations".

What was that line you used with Steve? Something about not dancing to
his fiddling...

Did I write that I agreed that I didn't know what a plateau is? I don't
see it here and I don't recall it. If or when Leonard H. hits that 5
wpm plateau, he can rest for a while and think about tackling the exam
which would give him an amateur license with HF access.

No kidding. Someone who is accurate only up to five wpm is not as
proficient as one who is accurate to 35 wpm. Tell us something new.

> The very recent (see Newsline) 136 KHz distance v. power

> are self-defined as "superior," your rate must be much higher.

You've not understood what was written. I'm superior in some things.
I'm inferior in some things. I've defined 5 wpm as "less than
mediocre".
Yes, my rate is much higher. I am more proficient than one who can
receive at only 5 wpm.

> >I'd be happy to listen to your definition of "double time" as it applies

I'm not at all concerned with what the commercial world is doing. I'm
active as a radio amateur. Morse is in wide use in amateur radio.

Sorry, Leonard. That isn't the matter under discussion. We were
writing of morse proficiency.

> That public statement is found at the FCC, not Google.
>
> Try to stay focussed.

Here are a couple of points for you to stew on: 1) There is an ongoing discussion of morse proficiency 2) there is still a 5 wpm morse exam for amateur radio HF access.

I refer to her as "Tugboat Annie" whenever her vulgarity begins.

I refer to you as "Foghorn" when you crank up your use of cutesty German
names or start the "poor baby" stuff.

But you knew all that.

You've talked but you've not done. You've been raving about morse
testing here for at least seven years. In seven years, you aren't one
step closer to an amateur radio license than when you started posting.
There's been no "Extra right out of the box". There hasn't even been a
no-code exam.

> The colonel keeps flashing his twin lightning bolts (ornaments
> on that high collar) insisting and insisting on certain

Otheres can't do as I've done. There certainly is no 20 wpm morse test--just a measly f i v e w o r d p e r m i n u t e s for HF access. You've now said that you once could copy 8 wpm. There is nothing to indicate that you could not do so again. As I've written before, the only thing stopping you is YOU. I have no sympathy for you at all.

Just in case you think I forgot the "colonel" and "lightining bolts" stuff:

N2EY: "Besides, here's a simple, plain fact:

I've not been nor am I being critical of current amateur radio testing
standards. I do not believe it is likely that those interested in using
morse will stay long at the 5 wpm level. Maybe you've not been reading
the thread.

> Do they really think that
> anyone that's interested in doing CW, and is actively pursuing communication

> they started out? Doesn't that sound stupid? Well, of course it does.

So far, nobody has written anything like that.

> Keep
> hammering on that nail-- if all's you carry is a hammer, everything begins

> I'm a beginner*. If I keep doing CW and having conversations using the
> mode, then I'll get faster and better at it.

Yes, Jackie, proficiency is a matter of speed and accuracy. Nothing
bars someone who is really proficient in morse from slowing down for a
QSO with a beginner. You're reading a whole lot more into this than was
being discussed.

> DUH!! That principle goes for just about everything, does it not?

Some people play the hell out of the guitar. Some folks practice for
years and never get beyond chording "Country Roads". Some people pick
up darts and are winning tournaments. Some play and play and play and
never get much better.
THAT principle goes for just about anything.

> How many times does this need to be pointed out to the OF's? Let me restate
> it for those who're slow on the uptake because their thought processes are
> constipated by prejudice against new ops and forever soured by the "lowering
> of standards" (i.e., "any less tough than I had it"): people who do slow CW
> are generally BEGINNERS, or they could be someone who hasn't been into CW
> for awhile and who is now rediscovering the mode.

When you start referring to those who've been licensed for a number of
years as "OF's" and begin "pointing out" things to them, I'm sure
you'll have to repeat it a number of times since it won't be long before
no one is paying any attention to you. It'll really help if you throw
in things like "constipated by prejudice".

> Attitudes such as the one displayed above-- "Just in case your accuracy is
> thrown off at the breakneck speed of five words per minute, of course. Five
> words per minute doesn't demonstrate proficiency" -- do not help anyone, and
> as such only serve to foster resentment and perpetuate a negative attitude
> towards not only the mode, but also towards those who really like to use it.

Let's test your ideas. Do you consider five word per minute code to be
fast code? Do you think that anyone whose highest speed is 5 wpm is
proficient at morse?

> to as a "beginner".

Not one time have I used the term "beginner". There are those who never progress beyond five words per minute. Some of them are inept and some of them never use the mode after passing an exam. Check out the Novice segments of 80 or 40 meters some evening. You'll find quite a number of stations conversing at or near five words per minute. These folks are not beginners.

> Dave Heil, would you withhold your slapdash judgments long enough to allow
> for a beginner to have studied and learned the code well enough in about 5
> hours over a four-week period to pass the mandated CW test? Hint: there are
> no extra "points" or higher license privileges awarded to beginners nowadays
> who can pass the code test at a higher proficiency speed, so it doesn't
> matter anyway.

Jackie, it looks like you've made a slapdash judgement about what was written and why. At no time did I set out to take a swipe at beginners. I stated that if your maximum morse speed is at five words per minute, you are not proficient in the use of morse. I could be politically correct and write that there is no difference in one who can handle twenty wpm and one who can handle five wpm as long as we are both trying our best--but I won't.

> Mediocrity is defined by Webster as: "of moderate or low quality, value,
> ability, or performance", which may well apply to beginners as judged by
> those who have had more practice in CW to become proficient. But I know of
> no one who starts out utterly excellent at any skill. The relevance of Mr.
> Heil's point here, if any, is utterly escaping me.

It certainly looks to me as if I've chosen my words well. "Mediocre" seems to fill the bill nicely. Why are you offended if someone says that the ability or performance of one who can copy morse at only five wpm is low? Where did I write that anyone starts at "excellent" or

"utterly excellent"?

> When I first came to this group, I thought I should read a good

> of some big-top billing of two midgets mud-wresting in some tawdry circus
> act... in other words, stupid, offensive, degrading and utterly pointless.
> Bye now, you two have fun.

Jackie, I welcomed you here and I congratulated you on getting your
station set up. I submit that you've read things into my recent posts on
morse proficiency which were not there. If you don't like what I write,
please feel free to not read it.

Dave K8MN

Bingo Mike,
Life is definitely too short to waste time on things we cannot change, or to worry about the negative stuff. If efforts were spent more on changing the things we can change, to make amateur radio a better place as well as the world in general, we would all be better off. It's soooo easy to be an "olde farte" (in relation to mentality not necessarily an age reference) and sit around and complain, but it takes a better person to effect positive change.

Would you kindly quote in Part 97 where it says a US ham is responsible for knowing other countries
allocations and keeping current on them and their updates?

I know, someone else came on frequency saying they were out. An authority? How would you know?
I guess everyone is supposed to accept what someone says as gospel? Yep, you would.

I am reading the thread and the question was not specifically directed at you, but anyone who wanted to answer. I should have wrote, "here's a question for anyone..." I just don't understand why people are so critical of slow coders who happen to be beginners.

> Some people play the hell out of the guitar. Some folks practice for
> years and never get beyond chording "Country Roads". Some people pick
> up darts and are winning tournaments. Some play and play and play and
> never get much better.
> THAT principle goes for just about anything.

Doing Morse is not really like playing the hell out of guitar. I have played guitar and it's a lot harder to learn guitar than it was to learn Morse. While some people can be remarkably proficient at something in less time than others (call it talent) Morse is not that hard to get better and faster at if one has the desire to learn correctly and practice.

> When you start referring to those who've been licensed for a number of

> in things like "constipated by prejudice".

Uh, how am I criticizing or talking down in any way to people who have been in the hobby for awhile? I couldn't possibly teach anything to anyone who's been in this hobby for years- I know far less than they do. To me, OF's are simply people with bad attitudes- and it has nothing to do with age. I know of a couple OFs who're in their 30's. Some people DO have constipated thinking if they can't reconcile change and cut some slack to those who deal with the results of it. I'm not pointing fingers at any one in particular, I'm not pretending to know more than the oldtimers in the hobby, I'm just pointing out that some people should be aware of when their attitudes are turning off newcomers and prospective amateurs. Being a newcomer to the hobby, I happen to care that our numbers don't go down. Problematic and misdirected attitudes could result in fewer people wanting to be a part of the hobby, through no fault of their own.

> Let's test your ideas. Do you consider five word per minute code to be
> fast code?

Never claimed it was, no. Who would? I don't know any beginners who are fast coders.

> Do you think that anyone whose highest speed is 5 wpm is
> proficient at morse?

If they are accurate, consistent and understandable, then sure, they are proficient- at 5 WPM. I'd say that "proficient" is first defined by accuracy. Perhaps our definitions are different, but to me, proficiency means you know how to do something and speed is of lesser importance, since one will likely get faster in time with practice.

Jackie

True enough, Dick. But there are some here who have what might appear to be a fixation on it. It was a big issue when I first showed up here, and it's still an issue, and I'll bet it will still be an issue for years to come.

And if as some say, she is doing it for the attention, the ploy is working well.

The answer IMO, is that there are couple reasons:

1. creeping codgerism, where a person has come a long way since they got on board the ARS. Many people do not have much time for newbies when they are not newbies themselves. Fortunately there are others who welcome new people. I have been fortunate to have met many people of this caliber who have been happy to put up with me. The old "no kids, no lids, and no space cadets" outlook still exists in varying degrees.

2. Exclusivity. The darkside of knowing Morse is that with humans being a competive sort, and with Morse being someting that can be easily quantified by the speed with which a person can send and recieve, and you have a hierarchy system if people want one.

>> Some people play the hell out of the guitar. Some folks practice

> hard to get better and faster at if one has the desire to learn
> correctly and practice.

Whoa Jackie! don't fall into a generalization trap. In my own case I experinced the exact opposite of what you describe. I play guitar, and I

was playing (semi) proficiently in a couple hours - at least you could identify the song. 8^) in the case of learning Morse code, it took me six *months* of daily practice - around an hour or more a day. I had an intense desire to learn, as a person doesn't spend that much time unless they really *want* to.

I think that Morse ability is something that some people either have or they don't. There are varying degrees in between. I think I fall somewhere in the lower part of the "have it" group. Am I stupid? possibly, but not because I can't do Morse well. i know some people who picked up Morse code almost immediately, yet flunked the written test several times.

Who is the better ham? one who can send and recieve Morse at 30wpm and has forgotten half of the technical knowledge or one who struggles along at 5wpm yet has a wealth of knowledge. Note I am speaking really hypothetically here - the argument has been trimmed to show the point of it. A Hams technical ability is not the major measure of a Ham either.

> to anyone who's been in this hobby for years- I know far less than
> they do.

Wrong. I always try to learn something from everyone I meet. And I pump all the Hams I associate with for knowledge, and offer the same whenever I can. Lots of more experienced hams don't know things I do, and of course I don't know so much of what they do.

> To me, OF's are simply people with bad attitudes- and it has
> nothing to do with age. I know of a couple OFs who're in their 30's.

I think it's just a microcosm of life. There are not-so-nice people everywhere. It's a 50-50 thing.

Who said that all amateurs are equal, Len? Not I. Those holding a Tech"+",
General, Advanced, or Extra have "earned" (There's that evil little word
again.) privileges than their no-code Tech counterparts.

> Are non-morsemen supposed to ride in the back of the EM bus?

Nope, she's just at that stage where she literally "soaks" up stuff. Why not give her the gift of being able to forget the code rather than learn it if she decides to become "radio-active," later in life? Notice I didn't say "to pass Element 1." Plus, it's a game to her. Gee, doesn't that mean 5-wpm is...ready, Len...here it comes..."childsplay." Haw! Actually, her characters are not set at 5-wpm...they're at 15-wpm!

> You are welcome to call all opponents of your viewpoints
> "children"

The statement doesn't fit...so you must acquit. Sorry, Len...I didn't call anybody a child.

Dick,

Why so negative? Perhaps Len has some useful information about ARS license numbers that he hasn't shared yet. For example, if he has old Callbooks or CD-ROMs, he could generate a listing of license class totals over various time periods and share it with the newsgroup.

Such data could either support or work against his claims. Without such data, those claims are just wild speculation presented as facts.

I have a question I can't seem to get a good answer for.

Can a Volunteer Fireman/EMT who has a ham ticket use ham frequencies to conduct operations with another Fireman/EMT ham while on duty?

Technically he is conducting "business", but he is also doing Public Service. Seems a little gray, but hopefully someone can clearify this for me.

Comments?

I'm going to take a shot at this. If they are conducting "routine"
operations, then no. However, in an emergency, all bets are off and they are
now be considered emergency traffic. (It'd better be an emergency though.)

You used my name a couple of times so I sensed that it was directed to
me.
I don't see much evidence of people being so critical of slow coders who
are beginners. Where do you see it?

> > Some people play the hell out of the guitar. Some folks practice for

The guitar was easy for me. Whether something is easy or hard seems to
be quite subjective. Learning three or four chords on a guitar is quite
easy for most people. Learning morse at 5 wpm is quite easy for most
people.
Becoming proficient isn't always as easy.

> While some people can be remarkably proficient at something in less time

> the hobby, through no fault of their own.

You'll understand that the attitudes of newcomers and those who have yet
to become newcomers can create negative reactions from some who have
long been licensed amateurs. Our numbers are not going down. Rather
they are moving steadily upward.

> > Let's test your ideas. Do you consider five word per minute code to be
> > fast code?
>
> Never claimed it was, no. Who would? I don't know any beginners who are fast
> coders.

I agree. I don't think that 10 wpm is fast either. If you keep using
morse, there'll come a day when you think 10 wpm is downright slow.

> > Do you think that anyone whose highest speed is 5 wpm is
> > proficient at morse?
>
> If they are accurate, consistent and understandable, then sure, they are
> proficient- at 5 WPM.

I didn't ask if they were proficient at 5 wpm. I asked if they were
proficient at morse. Is someone whose speed, consistency and accuracy
is 30 word per minute proficient at morse?

> I'd say that "proficient" is first defined by
> accuracy. Perhaps our definitions are different, but to me, proficiency
> means you know how to do something and speed is of lesser importance, since
> one will likely get faster in time with practice.

When I write about someone whose maximum speed is 5 wpm, I mean someone
whose accurate speed is 5 wpm. If you say that your speed is 5 wpm but

you can't really copy what is sent, your speed isn't 5 wpm. Proficiency doesn't deal with what one is likely to do in the future. The word proficient means (according to the Random House College Dictionary) 1. well-advanced or expert; skilled. 2. an expert. Someone whose maximum morse speed is 5 wpm is not proficient. That isn't an insult to newcomers.

Quick, pass the Pepto-Bismol.

The "Special Counsel" title is a fancy way of saying that he has a specific area of assignment (Amateur Radio issues). No, he's not a "temp" - he's career Civil Service. I know this because I know him face-to-face for many years.

Yes, he is not on the Wireless Telecomm Bureau staff list because he is not part of that Bureau and hasn't been for years. He is part of the Enforcement Bureau, where he sits (figureatively) at the right hand of God (Joe Casey, Chief of the Technical and Public Safety Division which is the remnant of what used to be the Field Operations Bureau before the Enforcement Bureau was created a couple of years ago).

Lucky Riley, he gets to sit (literally) two states away from the Headache Palace and do what a lot of us wanted the Wireless Bureau and its predecessor(s) to do for all the years until the function was reassigned to the (now) Enforcement Bureau.

Absolutely not. He would be conducting "the business" of the
fire department rather than amateur public service.

This specific question came up about 20 years ago with regard to
the Sacramento (CA) Sheriff's Reserve Patrols, and the clear answer
"NO" came from the FCC.

The only exception would be if RACES was activated and then the
operators would have to be RACES members and their operations
conducted according to a RACES plan under the control of the
appropriate Emergency Manager.

Nope! It is perfectly legal for a volunteer fireman to do
this. It is done all over Tennessee. The FCC stuck their
nose in the matter a few years back and got it chopped off
by the entire Congressional delegation of Tennessee plus
both U.S. Senators. Both our U.S. Senators said the FCC
would have their budget cut if they ever stuck their nose in
volunteer firemen's business in Tennessee again.

>
> The least possible (I'd like to see all remain with us).

Agreed!!

A better question would be "what's the minimum realistic dropout
rate?".

If the 'average' ham is licensed 50 years (!) the dropout rate
averages out to 2% per year. With 680,000 hams, that's 13,600 per
year.
>
> > Also, how does the dropout rate correlate to license class?
>
> Beyond my original comments, perhaps not at all.
>
One way to calculate it from the AH0A data:

1) Add up all the cancellations and expirations for a given time
period (say, calendar year 2002). Call this total 'raw dropouts'

2) Add up all the renewals and renewals-in-the-grace-period for the
same time period. Call this total 'all renewals'

3) Subtract 'all renewals' from 'raw dropouts' to get 'adjusted
dropouts'.

For the Technician case, both Techs and Tech Pluses must be considered
together because Tech Pluses are renewed as Techs. If this is not
done, the Tech dropout rate will appear to be lower than it really is,
due to Tech Plus renewals offsetting true Tech dropouts.

If anyone actually does this calculation, I predict the dropout rate
will not be much different for the various license classes.

>What an idiot!

Gosh, olde farte, you are welcome to come to Los Angeles and
tell the LAPD that it existed. Some nice LAPD folks at the
North Hollywood Division told me all about a teleprinter net that
was working away since before WW2, connected into a national
net of TTY just after WW2. That was confirmed by telephone
with the Piper Technical Center in downtown L.A.

Did you use the telephone number I supplied in here some years
back? No?

Well...we'll just chalk it up to yourself being unable to
differentiate "telegraphy" equipment. Teleprinters (trade name
Teletype) are classified as telegraph equipment. I guess some
terms in the state of Missouri are different... :-)

Ah, but this sub-thread evolved out of the Latin phrase "primus inter pares," an oxymoron in a dead language...literally translated as "first among equals."

That Latin phrase was used by RCA commercial avionics group out of the RCA Electromagnetic and Aviation Systems Division back in the 1970s. Cute, but it was ripe for some kidding in the avionics industry...:-)

As used in amateur radio, it is meaningless in the sum total of political correctness and "CW" (Conventional Wisdom, a phrase used by Newsweek magazine) hamspeak. US amateur radio has been stratified for decades by a Class Distinction, reaching a peak with the 6 different classes of amateur licenses. Those still exist, by the way, 99-412 didn't take it away entirely, just stopped issuing new amateur license grants to 3 of the 6 classes. The 6 classes still exist legally and factually.

The olde farte mindset is absolutely grounded in Class Distinction in here...the olde fartes being condescendingly smug/arrogant in looking down noses at the "inferiors." Since they insist on a curious sort of "equality" of their "ham community" through an amateur license they nonetheless rate themselves "first" (if not "superior"). That "firstness" is evidently extremely important to themselves although of marginal value to anyone else. :-)

>> Are non-morsemen supposed to ride in the back of the EM bus?
>
>Of course not, just pass Element 1 and move up to the front.

Odd, a half century ago and during four periods subsequent, I've operated over much of the HF spectrum without any morsemanship necessary or needed.

Ah, you are referring to AMATEUR radio where a number of amateurs consider morsemanship to be of the paramount skill accomplishment...and therefore being a "qualifier" for permission to operate in small slices of the HF spectrum.

That's still curious...other radio services do not have this "qualifier" yet the amateur still considers it a necessity. It seems to be the only radio service requiring that qualifier. Do you sense any illogic there? Or isn't it just an emotional mindset based on

some odd territorial imperative held by those wonderful olde fartes?

>> >We both know that's incorrect, right?
>>
>> No. I've heard the CW-PC shouting and hollering from amateur
>> licensees for 45 years. Their QRM pervades discussion to this
>> day. By observation all those eptitheti indicate that the spray-
>> bottle crowd believe their bigotry is divine and unchangeable.
>
>I was agreeing with you, Len. "Calm youself."

No problem. Bigotry exists in human society in many guises.
I've seen enough of it in seven decades of existance...actually
quite enough by the third decade. Does your comment mean
that you condone bigotry by self-styled supremacists?

I don't condone it, nor appreciate it, nor accept it. You may have
noticed some of that in here... :-)

>> >Acknowledged and movin' on...
>>
>> We will see...please do not be optimistic since someone in
>> here is about to go ballistic.
>
>Again, Not I.

I do not expect it from you, Bert. In this medium there are a
surprising number of readers who never post but a small group
of olde farte regulars who insist on nailing their personal view-
points, prejudices, preferences, and persimmon-puckered
ascerbicity upon some "infereior" elements as if those sub-
humans required some kind of ethnic cleansing. :-)

>> Absolutely...and NOT "underwhelming." There's been NO
>> logical need for morsemanship in amateur radio for years
>
>Sure there is, Len. All the bands contain CW sub-bands and 30m is CW only.
>(...and all are quite busy.)

Sorry, but all those sub-bands are there to satisfy the needs of
some olde fartes, a sort of spectral clubroom away from the
main hall of the lodge, isolated so as to not upset the narrow-
banders seeking refuge from the turbulence of the mainstream.
There they can exercise their special skills, give each other
virtual high-fives about being the best of all radio operators...as
they imagine the rest of the radio world smiling down in
appreciation of their magnificent morse accomplishments.

Note: "All the bands" refers only to amateur HF and two small
slivers of each of two VHF bands. There are NO exclusive
CW-only sub-bands on the 99+% of US amateur allocations
which are above 2 meters. Note also that US amateur HF
allocations are not that exclusive for OOK CW; only the two

VHF slivers are CW-only.

>> only the insistence of old-timers that such skills MUST be
>> achieved...to fit the old-timers' quaint ideas that amateur
>> radio skills of long decades ago MUST be preserved in a
>> sort of living museum of the airwaves.
>
>"Living" Museum, Len? "It's alive!" ("That's Fronk-en-steen.")

Mary Shelley should have had a talk with Ada Lovelace.
Neither produced anything but fiction. [those not knowing
literary history will not understand the above...]

ARRL caters to the olde farte mentality, the traditionalists,
the certificatists, those wishing (sometimes desperately) of a
lifestyle away from reality so that they achieve some sense of
self-importance. Since ARRL has a virtual monopoly on US
radio amateur publications, ARRL can exercise influence on
the "amateur community." Perhaps ARRL has deluded itself
since three-quarters of all licensed US radio amateurs are NOT
members. ARRL still does not understand that and may not
until there is a full turnover of all its managers and directors.

>Huh? "I say, I say, I say...you're ramblin' son. (Foghorn Leghorn)

Don't be a cartoon. The original was "Senator Claghorn" (voice
of Kenny Delmar) on the Fred Allen radio show's "Allen's
Alley" regular skit, along with "Mrs. Nussbaum," "Titus Moody"
and some others.

>> That's nice...you now equate newsgroup opponents as
>> children?
>
>Some, yes. In a few cases the children a a tad more sensible. <hihi> Oops,
>sorry...I meant <g>

Careful OM, don't use BF. 599 on the "translations" but not
needed as a ROTFLMAO will do nicely in this mode. :-)

BF = "Bad Form" a quaint olde English expression rather out
of date, even by Brits nowadays. At one time that was
supposed to be one of the accepted abbreviations in hamspeak,
pushed by certain Anglophiles in the New England area.

>Nope, she's just at that stage where she literally "soaks" up stuff. Why not
>give her the gift of being able to forget the code rather than learn it if
>she decides to become "radio-active," later in life? Notice I didn't say "to
>pass Element 1." Plus, it's a game to her. Gee, doesn't that mean 5-wpm
>is...ready, Len...here it comes..."childsplay." Haw! Actually, her
>characters are not set at 5-wpm...they're at 15-wpm!

Of course...and by extension, all of the ham operating "skills"
are then based on childhood pursuits or are childlike? Are

all the olde farte mentalities grounded on some childish game
of "king of the hill?" Perhaps so.

A previous message merry-go-round in here involved the FCC's
rather lax definition of morse code word rate...itself based on an
obsolete CCITT document which had been revised and updated
by ITU-T...but the FCC had not corrected itself in 99-412 or a
subsequent addendum on restructuring.

Regardless of the accomplishments of your very own child, not
all children are supplied with an unlimited number of aptitudes,
able to "soak up" anything equally. That applies to languages,
artistic skills, reasoning skills, physical skills and similar
attributes...including arrhythmic monotonic pattern cognition
(on-off codes as heard over radios). Federal regulations on radio
are not based around individual-example children but on all US
citizens of all ages. Regulations on mitigation of interference
are there for responsible humans requiring some degree of
maturity.

Now, I'm not criticizing you or your daughter, Bert, but parents
are seldom able to evaluate their children objectively, regardless
of their claims. Children aren't the issue. Regulations affecting
the entire citizenry of a country are the issue.

>> You are welcome to call all opponents of your viewpoints
>> "children"
>
>The statement doesn't fit...so you must acquit. Sorry, Len...I didn't call
>anybody a child.

You are not a Johnnie Cochrane nor an O. J. Simpson, are
not on public TV in here. You may have robes but aren't a
"Dancing Ito" led by a Marcia Clark.

The "Haw, childsplay" commentary you've used implies that.

>> Do not expect all the charges of childish whining to be received
>> in good humor...
>
>Alrighty then, whew! You take care, Len.

See ya...

Yet another name to be called...Of course LENNIE doesn't DO that kinda thing...HE'S a "PROFESSIONAL".

Yes, Lennie, I >>AM<< sorry. For if you'd had a better experience, you'd be a "ham" today instead of acting like a pig.

>>Of course the obligatory suggestion that Amateurs are drunkards and
>>incompetent. Wouldn't be a LennieRant unless there was one, I guess.
>
>Oh, my, outrage by Sgt Yaputz!

Outrage? Naaaaw. That passed a long time ago. Just once again pointing out how you REALLY consider Amateur Radio.

>Was "Mary" impressed by your mighty monopole "antenna?"
> Was it olive-green in color and marked "USMC?"
> Was that between wives or during a marriage?
> Was "Mary" impressed by your tales of Hostile Action
> Heroism?

Nope. Just friends. I'd go into the definition of what "friends" are, Lennie, but since you don't have a common frame of reference with mere mortals, why waste any bandwidth...?!?!

>All you hoary old-timers seem to think of nothing but HF as
> "the ham bands" and expressing this devotion to DXing and
> CW. See Roll, Heil, Miccolis, Carroll, et al., in here.

Sorry, Lennie. Almost everyone in here has expressed use/prerence in ALL Amateur bands, not just HF.

You are, again, lying.

Leonard H. Anderson...ex-rear area radio clerk widget with a bad attitude about what he can't have...Friends and fun.

Too bad for Lennie.

> to look like a nail.

I understand that the code test is done "Farnsworth" style, i.e., higher speed
characters (13wpm?) spaced at 5wpm. So you have to learn what the
characters sound like farnsworth style. Presumably, once you get your license
and operate CW, your speed will quickly pick up. Back in the old days,
when you had to go to a FCC field office for all the tests, the 5wpm test
had characters at 5 w p m. Daaaah daaaah diiiit daaaaaah.
You'd have to reeducate yourself from that to get good at CW.

I suppose *if* the regular fire frequencies got overloaded or their
equipment went down during an otherwise routine emergency, then
the use of ham freqs would be okay. But not for routine activities.

Glad to know that money talks; then again, if it truly does, we may loose all VHF and above amateur allocations. Then again, with a drug manufacturer threatening to cut off Canadian wholesalers if the drug (cheaper in Canada) is sold to Americans, I am really beginning to wonder. Hmmm ... I heard the US wants to fine 'em $1,000,000.00 ... I think they should bring the racketeering laws to bear and throw the CEO in the slammer for about 25 years (10 years for the immediate reports to the CEO).

I guess Michael Learned what it was like to live on Walton's Mountain!

> Life is too short to worry about Kim's callsign.

The only person in this newsgroup who could possibly be "worried" about Kim's callsign is Kim herself. However, since she has consistently stated that she's happy with it, obviously she doesn't have a conscience about things like bringing the ARS "...one step closer to extinction."

Ryan:

No need to kill a lot of trees on my account. Kim showed up in this
newsgroup sporting her demeaning, sexually-provocative call sign, and
literally dared someone here to make something of it. She got what
she asked for. Any other moron who shows up in this newsgroup with
a call sign capable of taking the ARS "...one step closer to extinction"
will be dealt with accordingly. No letters to the FCC are necessary;
they already know that they issued these call signs, and will merely
defend their having done so as the call sign holder's "right" under
freedom of speech. That is not the issue, nor is it the solution. The
responsibility for the demeaning of the image of all radio amateurs
lies solely with those who chose call signs intended to incite prurient
interest.

Tsk, tsk, tsk..."S25" refers to the entire set of ITU-R Recommendations for amateur radio.

S25.5 is the specific Recommendation in regards to administrations giving International Morse Code testing for any amateur radio license having privileges below 30 MHz.

S25.5 does not "limit" anyone, since it merely indicates a frequency below which licensees should (not shall) demonstrate the ability to receive International Morse Code by ear and send by hand. Note that ITU-R Recommendations are just recommendations, not commands or regulations to be obeyed.

In the USA, the "send by hand" portion of S25.5 is an optional waive for all examinations. Administration members of ITU-R are not obliged to precisely obey all recommendations.

Japan has waived Recommendation S25.5 for a certain class of their amateur license which does have HF privileges.

Administrations are free to impose morse code testing for all amateur licensees if they so wish, or partial morse code testing for privileges above 30 MHz. It is all up to each nation's

administrations.

> Nothing strange about that...it's been that way for decades.

That it was "always so" is not a valid criterion for an ITU-R
Recommendation.

No, the US government says so. The Federal Communications
Commission is an independent agency. It was formerly under
Department of Commerce, a secretariat.

There are three branches of the United States government:
Administrative, Legislative, Judicial. Congress is the
Legislative branch. The presidency and secretaries are the
administration branch. The Supreme Court is the Judicial.

Wow, and you questioned my assumptions. Actually, I like the numbers though. If true, that means I have about 46 more years to go - which will make me about 90+ years old in the end. At that point, I guess I'll drop out of ham radio and go into deep sea diving or something. :)

And, yes, I do know what you're trying to say. I'm just trying to lighten up the conversation a little (see below).

> If anyone actually does this calculation, I predict
> the dropout rate will not be much different for the
> various license classes.

I'll take your word for it, Jim. My original comments were just a knee-jerk reaction to my first impression of the numbers. Because of that, I'm certainly not going to defend them through an in-depth study using the steps you've outlined.

I agree with what the other fellow said - he should check with the FCC for a specific determination first. I seriously doubt such use is acceptable.

As for your comments, it is not "perfectly" legal. It is most likely a direct violation of FCC rules governing ham radio. If so, any person caught using those frequencies for such activities could be subject to enforcement.

Actually, firefighters (volunteer or otherwise) have no business using the ham radio frequencies - or the frequencies of any other radio service not specifically allocated for that use. The FCC's ultimate position will most likely be that firefighters should use the frequencies already set aside for public safety agencies and their personnel. Since there is no shortage of those frequencies, there is no mandate to use other frequencies.

Furthermore, ham radio frequencies are not the best choice for firefighters to use. Unless it is a true emergency (and I'm not certain all fire calls would be defined as such under the rules governing ham radio), firefighters would have to share those frequencies with other ham operators. For example, firefighters would have no recourse if the conversations of other hams interfered with their operations.

Finally, your story about the members of Congress from Tennessee has the ring of fanciful local folklore. Few members of Congress would be that concerned over the volunteer activities of a local ham operator, especially as it relates to his use of his privately owned radio.

Sure. Go tell your fairy tale of how "protected" amateur radio freqs.
are
to any military commander. The U.S. military makes use of any amater
frequency anytime and for how often and how long it pleases. Hams
have an overinflated view of themselves as to their self-importance in the
larger scheme of things. Duhhhhhhh.

Dont for get about the Yaesu/Vertex WiRES II system. That system has been running in Japan for a year or so, and was just introduced in the USA about 6 months ago. Europe and a few other locations have also started WiRES II ops so it seems to be picking up a little bit of popularity.

Poor baby...doing a bad imitation of the late Peter Finch who
starred in the film "Network?" Tsk, tsk, tsk.

Anonymous, too. Shows great non-courage... :-)

Lots of mighty "amish" in here, hiding behind their dark cloaks
of anonymity, waving their mighty wooden weapons of a
century or more of the past, charging blasphemy and heresy
against their idolatry. They are a wonder to behold, legends
in their own minds.

>Now go climb back under that rock you slithered out from!

Oooooo! I'll bet you want to meet me after school to beat
me up in the schoolyard, too!!! :-)

>You should rename your self from Len over 21 to Len's IQ less than 21!

That's only a screen name, you poor angry person you.

My real name and full mailing address has been printed many
times in past issues of Ham Radio Magazine...as well as a
few other magazines and one BYTE Book. For confirmation
of that, see old issues or buy a full set of articles from all 22
years of Ham Radio on 3 CDs, available from CQ or ARRL
for $150 (shipping charges extra cost).

You might want to see your personal physician. Extreme
anger over minor things is often a sign of mental disorder.
Many modern pharmaceuticals are available to treat such
conditions and restore some normalcy.

>Why so negative? Perhaps Len has some useful information about ARS
>license numbers that he hasn't shared yet.

I've "shared" information 5 years ago on the FCC's own database (available then, as now, free to the public). Got arguments and charges of "lying" about it...:-)

>For example, if he has old
>Callbooks or CD-ROMs, he could generate a listing of license class
>totals over various time periods and share it with the newsgroup.

FCC grants US amateur radio licenses, not the Callbook or CD-ROMs. :-)

Ever since the restructuring period, the AH0A stat pages have lumped the two Technician totals into one pseudo-class. That was clever for Speroni, an avowed PCTA...especially when the no-code-test Technicians can't be readily extracted to show the actual growth of non-morse hobbyists in the USA. The rationales for them "being essentially the same" abound. :-)

One CAN get somewhat-old data from the Speroni stat site for a relatively short period before restructuring. Mr. N2EY has never accepted such arguments since he too is an avowed PCTA and insists on the morse code test not being any sort of valid reason. :-)

>Such data could either support or work against his claims.

Tsk, tsk, tsk. In previous numbers games in here, Mr. N2EY
has been steadfast in rationalizing his viewpoints and using
sources and presentations from those sources which are
biased towards his own viewpoints (that of an avowed PCTA).

ALL of those exchanges are in Google. :-)

The FCC makes the entire US amateur radio license database
available to the public, updated each week. That is the source
of "Callbook data" and "CD-ROM data" except that downloaders
often do further sorting for their own purposes. Such sorting and
tabulation is NOT government approved, just based on
government data. Mr. N2EY is free to download the FCC data-
base and sort his own directly.

>Without
>such data, those claims are just wild speculation presented as facts.

Tsk, tsk, tsk! "Wild speculation!" :-)

PCTAs in here seem to be imbued with morsemen's wild hair
on even the least negative attitude towards morse code's
macho magnificence. [see Mr.N2EY, Dickiebird, the colonel,
the flipped-out hostile action hero, and some other bus riders,
see also Dick and Jane plus Archie from ARRL in old ham
comic book strips]

There's very selective non-acceptance of "facts" in here by the
PCTA regulars if such facts do not exemplify, honor, and
revere mighty morse. QED. "It is as demonstrated."

Since my two Callbooks (same year, different sorting) from the
mid 1970s long since went to the recycling can...so did my
three IEEE membership directories (from different years), old
telephone directories, old industry periodicals and old catalogs...
stating the personal presence of such data sources is not
strictly "factual." Factual implies that a data source is available
for anyone to peruse, reference, or check...and remains un-
changed in content. Anyone.

Deliberate biasing of true factual data is bogus, the "wild
speculation" of Mr. N2EY's charge. An example is the bundling
together of the Speroni stats for Technician and Technician-Plus
so as to mask those that were code tested versus those that
were not code tested for their licenses.

Mr. N2EY should busy himself with downloading the weekly FCC
free databases and sorting them out himself...instead of using
others' databases? Or prepare another Sermon on the Antenna
Mount evangelizing the Right Attitude on the worship and
reverence of morsemanship.

beep, beep

Lloyd, it isn't so much the amateur's 'importance', in many instances it is a case of international agreements. Of course, I might be in error on this one - but if the military decided to put a big mux signal on your favorite tv station, I'd wager that you would be raising a stink with your congressperson. In any event, the military does answer to someone (*not* the FCC - maybe more like the president ... er, commander-in-chief) and he/she along with congress answers to big business ... er, the people .... That aside, I am very interested in what international agreements are going to do (not directed against you - I am curious about this Iraq thing ... the greenhouse gas thing ... and a lot of other things). It would seem that agreements are important so long as we like the particular agreement (or am I missing something?).

73 from Rochester, NY
Jim
ps - I still recall the blast from the CNO about operating in the 75 meter amateur band. To protect the guilty, I won't mention the guy's callsign, but as I recall, the guy who sent a telegram to the FCC had his 1st class radiotelephone ticket, commercial telegraph ticket, and amateur extra class ticket and had mentioned how many channels of that multiplex were being keyed, the signal strength, frequency, and equipment it was monitored on. No mention was made of the military. Probably the signal strength indicated that the problem was local. The number of channels and spacing (gee, was it 16 channels? I forget) indicated it was military. Apparently, someone in Washington dropped someone else a note ;)
I also recall that the person in question was loading up his skivvies for a couple of weeks hoping to heck that no one found out who raised the complaint!

Perhaps your impression of hams having "an over-inflated view of themselves as to their self-importance" comes from an apparent inability to comprehend what you read. I said nothing whatsoever about "protected" amateur radio frequencies or the military.

We were talking about a ham operator, also a volunteer firefighter, using his privately owned ham radio equipment to conduct fire department operations related communications on the amateur radio frequencies. Since he is a ham operator, he is subject to the rules governing ham radio. My previous comments addressed that.

I don't think either of you understand what's happened here. No one has criticized nor "put down" anyone
because they're a 5wpm beginner, so far as I can tell. The problem is with the few like Burke and Anderson
who have an ingrained animosity toward Morse code and all who've been around ham radio any serious length of time who don't share their views. Morse is nothing more or less than an affront to them personally. They don't like it and never have, so it follows they don't have any use for anyone who considers it idiotic to regard it as some ethereal "barrier". Maybe for some tiny segment of all those who really want to become ham radio operators it might indeed be an obstacle. So it was for most of us who learned it the hard way long before there were such things as cassette recorders and computer programs. We learned it by memorizing the characters on the chart and listening for them on the air with really primitive

receivers, by comparison with
anything in use today. Turned out that was a real benefit in the long run since it trained us to use our brains for
QRM filters. To this day I am able to pick a single CW signal out of a crowded band with no help from a narrow filter at reasonable speed.

Please understand- When Larry Roll rants about all the "dumbed down" Extra lites that says nothing about his attitude toward newcomers, even those who happen to be Extra lites. It's the dumbed down system he/we decry, and he *does* have a point. We all know that you had nothing to do with it and were we in your circumstances we'd do exactly as you have/are. The criticism is toward not newcomers but some of the
older procrastinating complainers who, instead of just quietly taking advantage of the looser standards and easier testing, find it so necessary to attempt to abuse those who, without comment nor complaint just did it
and met the requirements.

I never guessed you as fatalist, just a pessimist. I am quite sure (an opinion) that Kim's callsign is not going to bring the hobby to extinction, but there are many other reasons much greater that will.

No letters to the FCC are necessary;
> they already know that they issued these call signs, and will merely

Well, there are other callsigns, apparently based on your criteria, vanity or not, that are offensive then..... I am betting that even the suffix of POO and PEE are going to "bring the a.r.s. one step closer to extinction" also eh?

My guess is that if it were a true (and would have to be clearly proven as such) emergency where loss of life or considerable property risk were involved AND other forms of communication equipment were not able to contact someone for emergency help, then I guess use of the ham frequencies would be okay in that regard. But CLEARLY the 2 points would have to be clearly demostrated, life/property risk, as well as the comm's issue. Possible defense of this argueing point *may* be at the bottom of this post....

If the firefighter is also a RACES person, that may be another issue as well. I am in that type of situation myself.....

If the firefighters are using the ham equipt./frequencies for routine business activities such as using it while on a call, or at a training excercise, my guess is that would clearly not be acceptable.

Now here's an issue, say if you had a department with a half a dozen firefighters that are hams, and you talked with another on the way to the station, depending on what you talk about, that *may* be construed as business. Also, what if not on a call, meeting or training but a group of firefighters get on a discussion about something related to the fire department, not while on duty but on their own free time?

The only close situation I ran into while being a ham, as well as a firefighter was about a year or so ago, and me and other firefighter were on a medical call at a biker rally and it reached a point where we were concerned for our safety and could not easily back out. Upon trying our department HT's and cell-phones, neither of them could reach the fire repeater nor cell tower for the area we were in. The only other means of communication was utilizing the ham repeater which I could hit, and called 911 through the autopatch to request law enforcement assistance. Being that there were no other means of rendering assistance, I can only assume that I made the right decision in this case. It is funny to note that there are quite a few areas in my county where the stupid cell phones have dead spots and the ham radio repeater works better than the county fire repeater system. The ham repeater is about 30 watts at about 90-100 feet and the fire repeater is at 275 feet at about 100 watts. 5 watt ham HT's seem to have twice (or more) the coverage area than our stinkin' fire HT's while working simplex or repeater frequencies!!!!! Go figure.....

Another point I am wondering, if it is a volunteer agency (we are not, we are paid on my dept.) are they conducting business, business meaning providing a service and rendering a profit? Is a true volunteer department the same as other volunteer/non-profit/community-public service activities? (comparing to working for the various bike races/walks/10k runs etc.)

Just some thoughts...

Sec. 97.401 Operation during a disaster.

(a) When normal communication systems are overloaded, damaged or disrupted because a disaster has occurred, or is likely to occur, in an area where the amateur service is regulated by the FCC, an amateur station may make transmissions necessary to meet essential communication needs and facilitate relief actions.
(b) When normal communication systems are overloaded, damaged or disrupted because a natural disaster has occurred, or is likely to occur, in an area where the amateur service is not regulated by the FCC, a station assisting in meeting essential communication needs and facilitating relief actions may do so only in accord with ITU Resolution No. 640 (Geneva, 1979). The 80 m, 75 m, 40 m, 30 m, 20 m, 17 m, 15 m, 12 m, and 2 m bands may be used for these purposes.
(c) When a disaster disrupts normal communication systems in a particular area, the FCC may declare a temporary state of communication emergency. The declaration will set forth any special conditions and special rules to be observed by stations during the communication emergency. A request for a declaration of a temporary state of emergency should be directed to the EIC in the area concerned.
(d) A station in, or within 92.6 km of, Alaska may transmit emissions J3E and R3E on the channel at 5.1675 Mhz for emergency communications. The channel must be shared with stations licensed in the Alaska-private fixed service. The transmitter power must not exceed 150 W.

Sec. 97.403 Safety of life and protection of property.

No provision of these rules prevents the use by an amateur station of any means of radiocommunication at its disposal to provide essential communication needs in connection with the immediate safety of human life and immediate protection of property when normal communication

systems are not available.

Sec. 97.405 Station in distress.

(a) No provision of these rules prevents the use by an amateur station in distress of any means at its disposal to attract attention, make known its condition and location, and obtain assistance.
(b) No provision of these rules prevents the use by a station, in the exceptional circumstances described in paragraph (a) of this section, of any means of radiocommunications at its disposal to assist a station in distress.

Sec. 97.407 Radio amateur civil emergency service.

(a) No station may transmit in RACES unless it is an FCC-licensed primary, club, or military recreation station and it is certified by a civil defense organization as registered with that organization, or it is an FCC-licensed RACES station. No person may be the control operator of a RACES station, or may be the control operator of an amateur station transmitting in RACES unless that person holds a FCC-issued amateur operator license and is certified by a civil defense organization as enrolled in that organization.
(b) The frequency bands and segments and emissions authorized to the control operator are available to stations transmitting communications in RACES on a shared basis with the amateur service. In the event of an emergency which necessitates the invoking of the President's War Emergency Powers under the provisions of Section 706 of the Communications Act of 1934, as amended, 47 U.S.C. 606, RACES stations and amateur stations participating in RACES may only transmit on the following frequency segments:
(1) The 1800-1825 kHz, 1975-2000 kHz, 3.50-3.55 MHz, 3.93-3.98 MHz, 3.984-4.000 MHz, 7.079-7.125 MHz, 7.245-7.255 MHz, 10.10-10.15 MHz, 14.047-14.053 MHz, 14.22-14.23 MHz, 14.331-14.350 MHz, 21.047-21.053 MHz, 21.228-21.267 MHz, 28.55-28.75 MHz, 29.237-29.273 MHz, 29.45-29.65 MHz, 50.35-50.75 MHz, 52-54 MHz, 144.50-145.71 MHz, 146-148 MHz, 2390-2450 MHz segments;
(2) The 1.25 m, 70 cm and 23 cm bands; and
(3) The channels at 3.997 MHz and 53.30 MHz may be used in emergency areas when required to make initial contact with a military unit and for communications with military stations on matters requiring coordination.
(c) A RACES station may only communicate with:
(1) Another RACES station;
(2) An amateur station registered with a civil defense organization;
(3) A United States Government station authorized by the responsible agency to communicate with RACES stations;
(4) A station in a service regulated by the FCC whenever such communication is authorized by the FCC.
(d) An amateur station registered with a civil defense organization may only communicate with:
(1) A RACES station licensed to the civil defense organization with which the amateur station is registered;

(2) The following stations upon authorization of the responsible civil defense official for the organization with which the amateur station is registered:
(i) A RACES station licensed to another civil defense organization;
(ii) An amateur station registered with the same or another civil defense organization;
(iii) A United States Government station authorized by the responsible agency to communicate with RACES stations; and
(iv) A station in a service regulated by the FCC whenever such communication is authorized by the FCC.
(e) All communications transmitted in RACES must be specifically authorized by the civil defense organization for the area served. Only civil defense communications of the following types may be transmitted:
(1) Messages concerning impending or actual conditions jeopardizing the public safety, or affecting the national defense or security during periods of local, regional, or national civil emergencies;
(2) Messages directly concerning the immediate safety of life of individuals, the immediate protection of property, maintenance of law and order, alleviation of human suffering and need, and the combating of armed attack or sabotage;
(3) Messages directly concerning the accumulation and dissemination of public information or instructions to the civilian population essential to the activities of the civil defense organization or other authorized governmental or relief agencies; and
(4) Communications for RACES training drills and tests necessary to ensure the establishment and maintenance of orderly and efficient operation of the RACES as ordered by the responsible civil defense organization served. Such drills and tests may not exceed a total time of 1 hour per week. With the approval of the chief officer for emergency planning in the applicable State, Commonwealth, District or territory, however, such tests and drills may be conducted for a period not to exceed 72 hours no more than twice in any calendar year.

The Question Pool Committee of the National Conference of Volunteer Examiner Coordinators has released a draft syllabus for the Element 3 (General) Amateur Radio examination. This syllabus will be used to develop a new General class question pool that will become effective July 1, 2004. The QPC is inviting comments on the document as well as suggested questions for the General-class question pool.

The draft is located at http://www.arrl.org/arrlvec/gp-syllabus-2004.html

Your suggestions and comments may be sent to qpc@arrl.org.

A friend of mine is looking at upgrading to General, and
was inquiring about the elimination of the code requirement.
I really didn't have an answer, other than they were supposedly
taking it up this month at the big meeting. Has anyone in here
heard anything in regards to what may happen or when?
This is an honest question and I am looking for honest
answers. Please reply to the NG, as I don't need my mailbox filled
with flames.
Thanks, Bill

The next WARC conference (this year I think) will possibly consider that issue. If they vote to not require CW any longer then the FCC will likely do the same. But don't get in a rush. It ain't gonna happen tomorrow.

And for goodness sakes ... how hard is 5 words per minute.

For me it was the hardest test I ever had to take,
but I did it anyway and passed. I hope they don't
get rid of the 5WPM test. Now I'm glad I had to
do it! I learned something I otherwise never would
have tried to learn.

Bill,

The "World Radiocommunications Conference" (WRC-03) will take place
from early June through early July this year in Geneva, Switzerland. (I
expect
to be there as part of the US Delegation.)

The regional positions prepared so far, as well as the national positions
that
are known, all indicate that the elimination of the Morse proficiency test
requirement
from the ITU ("International Telecommunications Union") Radio Regulations
will
be a "slam dunk."

After the international (treaty) requirement is removed from the radio
regulations,
administrations will be free to remove corresponding Morse test requirements
from their national regulations for licence classes that allow access to the
frequencies
below 30 MHz.

Message-ID: <f45722ac.0303072001.136673ec@posting.google.com>
Source record: 62543

From the ARRL Letter, Vol 22 No 10:

==>UK TO AK ON 136 kHz

Reaching Alaska from the United Kingdom using just 1 W ERP is quite a feat for any band, but the Radio Society of Great Britain reports that Laurie Mayhead, G3AQC, was heard in Alaska on 136 kHz. In the early hours of February 15, he transmitted to Laurence Howell, GM4DMA/KL1X in Anchorage, and just before UK dawn at 0615 his call sign was clearly identified using software to read the signal.

G3AQC was using QRSS--very slow CW--with a 60-second-long dit. The 7278-km distance is a transmission record for 1 W ERP on 136 kHz.

Two years ago, Mayhead and Larry Kayser, VA3LK, made ham radio history when they completed the first two-way transatlantic exchange on 136 kHz, also using very slow speed CW. Last year G3AQC became the first person to span the Atlantic on 73 kHz.

Howell expressed surprise that the path involved in the latest accomplishment is "notoriously poor" between southeastern Alaska, on the east coast of the Pacific, and Europe. "The signal would theoretically go on a Great Circle route to nearly 80 degrees north, over the northern Canadian Arctic, northern Greenland, east of Iceland, Glasgow, then over the UK to the South Coast--across and through the auroral oval."

He said there's speculation that the actual path might been around or even under the auroral zone, since there was no auroral Doppler seen on the received signal. Howell and Mayhead credited research and preparation carried out by G3NYK, G3LDO, W3EEE and W4DEX, for helping to set the new LF record.--RSGB

Imagine if Laurie had used Dick's "banana boat swing" to evade machine copy.

Trivia Time:

If the dit was 60 seconds long, how long is the dash?

How long is the inter-character space?

How long is the inter-word space?

Could Farnsworth have been substituted for Morse Code, and worked as effectively?

Are these UK amateurs considered proficient?

Bill:

The remaining 5 WPM Morse code testing requirement will most likely
be eliminated after the World Radiocommunication Conference (WRC-03)
happening this June in Geneva. This is when the ITU radio regulation
S25.5 will be presumably voted out of existence, making it possible for
the separate national radio regulatory agencies (like the FCC in the United
States) to eliminate code testing as a requirement for an amateur radio
license with full HF privileges. I have no doubt that this will, indeed,
occur. It will NOT be a good thing for the ARS. (That is my opinion,
not a "flame.")

Dick:

You've nailed it. I personally know many amateur radio "newcomers" who happen to be General- or Extra-Lites, and they, for the most part, have not dared to presume to be anything other than the lesser trained and experienced amateur radio operators that they are. I am more than willing to show them the way to "earn" their place in ham radio, and a few have responded positively. The ones who haven't either drop out or consign themselves to the repeaters. In any case, it is THEIR attitude, not mine, that shapes their future as hams.

>Then why the incessant personal attacks?

Brian:

I will not presume to speak for Dick, but my alleged "attacks" are not intended to be "personal" unless and until the person to whom I am responding makes it so. Usually, this takes the form of some newcomer Extra-Lite demanding instant acceptance as a full-fledged Amateur Extra-class operator in spite of never having been exposed to anything close to the technical knowledge or operating experience required by his Pre-Restructuring counterparts in order to attain that status. The new Extra-Lites are the unfortunate victims of reduced standards which now set them apart as being inferior to their presumed "peers." The same will be true of the dumbed-down college graduates who have been passed through the colleges and universities of our country by Affirmative Action programs and a curriculum which is heavy on politically-correct social indoctrination and increasingly lacking in the basics of the sciences, arts, and humanities.

I truly fear for the future of the world. I'm sure that eventually, Socialism will
be tried here in the United States, and, as it has everywhere else, it will expose it's subjects to generations of misery before it eventually fails.

One of the many topics to be discussed, perhaps voted on,
at WRC-03 (World Radio Conference 2003) in Geneva,
Switzerland, mid June into beginning July, is a revision
of all S25 Recommendations for interenational amateur
radio. That includes S25.5, the one Recommendation that
addresses International Morse Code testing for all amateur
radio licenses having below-30-MHz privileges.

Only administrations may vote on Recommendations at a
WRC. The United States administration is represented by
members of the Department of State, Federal Communications
Commission, and National Telecommunications and
Information Agency (NTIA). There are several "observers" and
"advisors" invited to be with the USA administration party but
they have no voting power.

WRCs (formerly World Administrative Radio Conferences or
WARCs) are held approximately biannually. All come under
the ITU-R or International Telecommunications Union radio
section. The ITU is a United Nations body. ITU establishes
Recommendations on spectrum allocations and regulatory
rules. These Recommendations are not binding but are held
by administrations under an honor system, pledges to support
the decisions made under the ITU.

A great many topics are scheduled to be covered at WRC-03.
A list of those to be addressed only by the US administration
is found on the FCC website: Click on "International" under
Bureaus on the FCC home page, then click on "WRC" at the
International Bureau main page. There are several downloadable
documents at the FCC WRC page. Amateur radio action item
numbers are 1.7.1 through 1.7.3., those previously discussed
by IWG-6 (Informal Working Group 6). One of those documents
should be a copy of the IARU (International Amateur Radio

Union) position on revision of all within S25; that may also be found at the IARU website, www.iaru.org.

The FCC has stated in 1990 under FCC 90-53 (establishment of the no-code-test Technician class) and in 1999 under 99-412 (Report and Order on US amateur radio restructuring) that a morse code test is not considered useful to the FCC in their determination of granting an amateur radio license. They also stated that the code test must be kept to honor the obligation of membership in the ITU. As a further note, FCC regulations were changed some years back to make a morse code sending test optional to examiners...despite ITU-R Recommendation clearly stating that the morse code examination test must include "reception by ear and transmission by hand."

ITU-R Recommendation S25.5 does not establish any International Morse Code word rate. That examination rate is optional to each member country's administration. IARU suggestions include a complete rewrite of all S25 articles.

There is no accurate opinion at this time as to whether any amateur radio recommendations will be voted on at WRC-03. The list of action items slated for that Conference is quite long and numerous. Most of the action items involve spectral allocations and technical Recommendations for international communications carriers and the commercial/governmental radio services. The 40 meter SWBC versus amateur frequency occupancy issue has not reached a solution since 1979 when it was brought up at WARC-79.

ARRL has taken a passive stance on the examination morse code test, neither for retention nor elimination. IARU has taken a position of revision of most articles in S25, including an elimination of the International Morse Code test for a license. The USA administration preliminary position paper supports the IARU suggestions according to the FCC WRC page. NTIA has taken a position two years ago that it favors elimination of the morse code test. NTIA is the agency under the Commerce Department that regulates and coordinates all USA government radio use; FCC (an independent agency) regulates only US civil radio use.

There are a variety of opinions among other nations administrations' radio regulatory agencies on amateur radio matters at WRC-03. Some favor elimination of the code test while others favor retention of the code test. Everyone will have to wait for what transpires in Geneva at WRC.

Presumably, three times longer than the "dit," or 180 seconds.

>How long is the inter-character space?

Good question; obviously that would depend on the software used. My
guess is it would be at least the length of a "dah," or 180 seconds.

>How long is the inter-word space?

Should be at least three inter-character spaces in length, or 540 seconds.
Again, it would depend on the software in use. At these slow speeds,
standard inter-chracter and inter-word spacing would not necessarily
apply. The exaggerated spacing would likely not be necessary in spite of
the increased length of the actual "on" time of the separate dits and dahs.
I'm sure they were visually monitoring each others signals on a computer
screen display that resembled an oscilloscope with a greatly expanded
time base. However, I doubt that they were sending any "words" longer
than each other's call signs. I'd sure like to read about the receivers
in use. They must have been dealing with signal strengths in the nano-
volt level.

>Could Farnsworth have been substituted for Morse Code, and worked as
>effectively?

I dunno. Since when is Farnsworth a "substitute" for Morse code? I
always thought it was just another method of sending Morse code.

>Are these UK amateurs considered proficient?

I'd say they were.

While there are people working to do this, there is no way to be certain if or when it will happen. Even though it may be considered at this summers conference, there's no guarantee that it will be voted on and there's no guarantee what direction such a vote would take. In addition, even if the ITU drops the requirement, each country will still have the freedom to keep it if they so use. Here in the US, it would take many months. First of all the FCC would put out a Notice of Proposed Rule Making. Then there would be time allowed for comments. And finally the FCC might or might not change it. This entire process would take quite a long time.

In the time that it would take for this change to happen, IF it happens, a person could learn the code and be on the air for months. It is pointless to wait. Especially since the sunspot cycle is on the declining side of the cycle. The average person can learn the 5wpm in approximately 30 hours of study and practice using modern study methods. Two fifteen minute sessions per day every day and you've got it in only two months.

Jerry Springer should set up a booth for interviews at Hamfests. He would have an endless supply of guests for his shows. It was once said that Hamfests are in reality an endless parade of human debris.

Since they have set a record that means they must be
on the cutting edge of Amateur Radio. And they are
using good old Morse's Code to accomplish it!
So much for it being a "dead mode" of little use.

Not quite right. Cutting edge? Arguably yes, but it was NOT "good old
Morse's Code" in any sense other than the actual encoding of characters.
Any arbitrary scheme of distinguishable periods of modulation, used to
encode the characters could have been used. Moreover, the feat required
the use of software (computers) at both ends. It could NOT have been
accomplished by two CW'ers putting fist to key.

Lots of interesting posts. There has been no doubt for many years which way the vote will go, despite what some would have you beleive. Once it can be brought to a vote, the Morse test requirement will be abolished by the ITU. The only trick, however, is geting it to a vote. In fact, the vote should have taken place on, I think, three previous occasions since 1995, but either didn't make the final agenda or else the whole conference was postponed. Frankly, it would have been carried by a few votes back in 1995, and would be a landslide now, largely because maritime use of CW ended in the meantime. There is little likelihood that it will not be voted on this time, however, as I think (or at least hope) that the ITU realise that the credibility of the ITU itself and their whole decision-making process is at stake if they continue to delay voting on any single issue to this extent, no matter what that issue is. I confess I wrote them a letter saying just that, but got no reply.

The domestic process is another matter. The FCC decision-making process is long and complicated, which is actually done to protect the public. Some think that it could take even as long as two years to get through the FCC, although that's about the longest estimate. Some other countries are already planning to ditch the Morse test immediately after WRC 03, notably the UK, but the FCC are unable to do that, as they have to consult on any changes they make. 'Immediate', by civil service standards, means a few months, so in the US I wouldn't necessarily expect it to happen before 2004, as it won't be 'immediate'! But it will happen. My XYL is waiting for element 1 to be abolished before she upgrades to General, but she is in no hurry. She will get there eventually.

370. Automated Transmissions from a Computer / Reapeter Station

Newsgroup: rec.radio.amateur.policy
Date: 2003-03-08 07:34:45 UTC
From: lszumel@yahoo.com
Message-ID: <94a4e3a5.0303072334.4296131@posting.google.com>
Source record: 62557

Hi all,

I've done my best to research this in past usenet postings, but I haven't come across any answers to this question. Hopefully I'm not asking a common or dumb question.

I'm relatively new to amateur radio, just have a no-code tech license.

I'd really like to experiment with a computer/ham interfacing project. I don't have a specific goal, but the basic premise is to have a transceiver hooked up to my PC and be able to remotely access the PC via repeater-like operation.

AFAIK, automated/unattended transmission is not allowed by the FCC on amateur bands. However, repeaters are allowed. So, would such a set-up be acceptable as long as the PC was only responding to my commands? I'm envisioning a DTMF code or something.

Of course, data would be lots of fun too, but I'd like to start with a simple DTMF interface. A nice starter project would be to ask the computer "do I have any email" and if I did it would tell me how many messages and from whom.

Thanks for any ideas or comments,

-Leo

I agree with the others, Bill. S25.5 will likely be voted out if it ever comes up for a vote. No delegation today has taken a public position opposing this. The question is whether it will come up for a vote. The conference has a full agenda, covering many subjects. Because of that, S25.5 may never make it to the table. In other words, it is possible, but I'm not convinced it is a done deal at this conference.

Okay, my friend, I'm going to repeat this one more time - stop accusing me of being Aaron Voobner. I am not Aaron Voobner. I have never posted a single message as Aaron Voobner. This accusation was first started by a bunch of CB'ers and I'm getting really tired of it. Up to now, I was willing to just ignore it, but it is becoming increasingly clear that I'm not going to be able to do so. This accusation has persisted for almost a year, and is now, thanks to you, following me to other areas of my life. This harassment will not continue.

Bill, I know 4 good Electrical Engineers who would
get their ham ticket tomorrow if they did not have
to learn the stupid arcane archaic code. These people
would be an asset to the hobby, yet the code is a
hinderance. (what Engineer who puts in 9+ hour
workdays and has a family has the time to learn code?)
The only reason I did is I was single whe I got my
ticket back in '76. You would thisnk ARRL would
put code to bed once and for all. Finally, to anyone
who thinks code is a "screwball barrier" take a listen
to 14.313 14.275 and parts of 75 at night.
So much for that hollow-argument!! Oy Vey.... :)

Oh? And what "treatment" would that be, Larry? I'm not sure that you mean
"treatment" as in nice or mean treatment. I've never noticed one way or the
other. Perhaps you can define...

I would think that both are correct, with guidelines. It seems to me that
an emergency service organization (police, fire, ambulance, fire & rescue,
etc.) would be able to avail themselves of amateur radio frequencies *IF* it
were in an emergency (not just routine use). The reason I would interpret
it this way is because of the rule for communication on any available radio
frequency during an emergency. While "emergency" is left to interpretation,
it is further defined as any threat to life or property, correct?

>
> As for your comments, it is not "perfectly" legal. It is most likely a

I'd agree that would be the case, if the use were for routine purposes.

>
> Actually, firefighters (volunteer or otherwise) have no business using
the
> ham radio frequencies - or the frequencies of any other radio service not
> specifically allocated for that use.
>

Unfortunately, it is being learned that the frequencies of fire, police, ambulance, etc., are inadequate--due to the fact that they cannot communicate with each other. After all, that is one of the many fundamental reasons for the amateur radio emergency communication network of services: the abiltiy of emergency organizations to communicate with each other. That is why I would support the purchase of ham radio equipment by emergency organizations--and its use if the situation warrants.

>
> The FCC's ultimate position will most
> likely be that firefighters should use the frequencies already set aside
for
> public safety agencies and their personnel. Since there is no shortage of
> those frequencies, there is no mandate to use other frequencies.
>

I think the existing rules would specifically argue that. Remember, I am talking about the use of amateur radio frequencies by emergency organizations (or anyone, for that matter) in an emergency situation. While it's been a long, long time since I've read different parts of the Communications Act, it does seem to me that I saw provisions that would allow any available radio to be used by anyone in an emergency. I've also heard this very topic debated many times on the air. It always leads to some great exchanges of ideas.

>
> Furthermore, ham radio frequencies are not the best choice for

all
> fire calls would be defined as such under the rules governing ham radio),
>

The rules governing ham radio would be that an emergency is defined as any threat to life or *property*. Fire is a huge threat to property, correct?

>
> firefighters would have to share those frequencies with other ham
operators.
> For example, firefighters would have no recourse if the conversations of
> other hams interfered with their operations.
>

OK, right or wrong for the firefighters to be using the frequencies--any human (amateur radio operator or not) would be other than nice if they were to interfere or to refuse to relinquish a frequency for an emergency service. I say this even if they (the firefighters) were using the frequencies for normal routine use. The place for challenge is with the FCC on this, not for us to refuse to allow fire personnel onto the frequency if they think they have the right.

>

If they don't have time to study the code, then they don't have time to
study for the written tests either. Afterall a good percentage of the tests
are rules, regs, operating practices, propagation, etc. You can't pass it
on electronics theory alone.

386. Re: Automated Transmissions from a Computer / Reapeter Station

Newsgroup: rec.radio.amateur.policy
Date: 2003-03-08 19:01:46 UTC
From: lszumel@yahoo.com
Message-ID: <94a4e3a5.0303081101.430f8a2e@posting.google.com>
Source record: 62573

This a bit long. Here's a summary (please correct if I'm wrong):

(1) Any station can be remotely controlled (47CFR97.109C) and use any frequency on which the operator is licensed

(2) Any auxiliary station can be automatically controlled (47CFR97.201A) on 1.25m or shorter, but the station must be part of a system

(3) Any station may be automatically controlled (47CFR97.221) for sending data on any frequency to which the operator is licensed, provided no more than 500Hz of bandwidth is used.

> Incorrect. See "Auxiliary station" which (under certain circumstances) may be
> automatically controlled (47 CFR 97.201(d)). See also .109(d).
>
> See 47 CFR 97.109(c) and 97.213.
>

Thanks for the pointers. This looks like good news for me. However, I am still not clear on the difference between automatic transmissions and transmissions from an auxiliary station.

47 CFR 97.201(d) clearly states that an auxiliary station may be automatically controlled. However, it's not clear to me what an auxiliary station is. 47 CFR 97.201(a) says any station licensed to a Tech or higher can be an auxiliary station--but do I need to do anything besides buy equipment? I can't find mention of how to license a station.

Also, The FCC defines Auxiliary Station to be:

"Auxiliary station. An amateur station, other than in a message forwarding system, that is transmitting communications point-to-point within a system of cooperating amateur stations."

Does that mean I can't have automatic control unless I'm part of a system of some sort?

Also, 47 CFR 97.109(c) says that any station may be remotely controlled, but only stations "stations specifically designated elsewhere in this part" may be automatically controlled. Is that referring just to auxiliary stations or to something else?

For my first application, I think 47 CFR 97.109(c) is all I need to move forward. But I'm interested in automatic control as well, and that might get me into auxiliary station rules.

Question: when it comes to data, would 47 CFR 97.221 be more
appropriate? That refers to automatic transmission of data on
non-auxiliary stations. Since any protocol like TCP/IP requests
packets that were sent, this would seem to satisfy the stipulation
that the automatic transmission must be responding to interrogation by
a station under
local or remote control" (47 CFR 97.221(c)(1)).

Also, I note that aux. stations may only transmit on 1.25m and
shorter. That's a bummer, since it increases my equipment cost for
this experiment.

Ok, sorry for such a long message!

Thanks again,

-Leo

That 136 KHz record was NOT set by "receiving by ear
and sending by hand."

There are several dozen other codes with error-correction
capability that could have been used (see the MIT "Red
Book" by Petersen and Weldon) and have been used for
decades. VERY weak-signal reception (to the point of
of signals BELOW the noise floor) has been done
academically and professionally for at least three decades.

That morse code was used at all is a tradition thing and
possibly bounded by regulations in the transmitting end's
home administration. Aperiodic, monotonic codings are
NOT optimum for very low signal communications.

Compute the equivalent WPM rate for a dot period of 60
seconds. Use any method. "Farnsworth" method would,
if patterned on the US optional test rate, have a WPM rate
based on 3 times the basic dot period. As such, the single
word PARIS (of 70 dot periods in length) would require
4,200 seconds to complete (70 minutes total) and the word
per minute rate would then be 1 per 3.5 hours. Is that in
the "proficient" category?

>So much for it being a "dead mode" of little use.

So much for illogical associations...

>If they don't have time to study the code, then they don't have time to
>study for the written tests either.

Sorry, but that's an illogical and irrelevant statement.

The code test exists as a separate element. A code test has always been a US amateur license test regulation. That does NOT mean it must always be there.

The argument is whether or not the code test is relevant to the granting of a US amateur radio license. The FCC is on record (since 1990) of stating it is NOT relevant. See FCC 90-53. See FCC 99-412.

>You can't pass it on electronics theory alone.

That was never an issue.

Perhaps the QPC syllabus should have questions on a right attitude? Belief in olde tyme hammus superioris? Strict adherence to tradition, jargon, methods, standards and practices? Marching in ranks to the same drumbeat?

If morsemanship is the Premier skill of amateur radio, such a strict requirement (of some in the "ham community") then, by all means, change the hobby activity to the Amateur Radiotelegraphy Service. Or possibly the Archaic Radio-telegraphy Service since there is a dwindling number of professional morsemen in the international radio world.

Study hard, work hard, exaggerate the license test into a PhD-equivalent academic test and anyone could be as great and wonderful as the olde tyme hammes.

> tell the LAPD that it existed.

I would be able to do exactly that, and also to PROVE it, you trolling
ignoramous.

I'm quite well aware that you aren't the only ignorant, arrogant
asshole residing in the Los Angeles Basin, hey I was there in person
myself only last week and observed a few, but one must ponder the
lucidity of anyone who remains there past the barest necessity.

I'll be glad to inform anyone there at LAPD of their former CW callsign
if you can dig up anyone with *any* interest, or even a mild curiousity.

I won't wait up for you or them. I'm fully aware that none of the new
generation of APCO types is at all informed on any serious amount of
their history and couldn't care less.

Oh- you wouldn't know that the quickest way to get a message from the
Midwest direct to LAPD was on CW. Via the relay at Flagstaff AZ under
most propagation conditions. It it went the convential route it would
have to be relayed to CHP Sacremento via CW, them typed into the
state's wireline teletype system. By the time it ever got that far, LAPD
would be acting on the
direct CW message and the teletype message will still be in someone's
hopper!

Yeah, I know, that frosts your bare backside, and chaps your cheeks,
buuuuttttttttt--
that's the way it was!

Useful? most of us thought that a full-access ham radio license would be
useful, despite
being required to actually DO something to get it. Evidently you
wouldn't recognize "useful".

That has long been the plan and still is. How're your plans going? Do
you think that someday you might find it in yourself to grow up, wise up
and move on
with your life? Or just sit it all out?

Given your track record I doubt many readers will be inclined to
accept anything you "know" at face value.

If I was in QSO with a foreign ham and some clod came on the frequency
and informed me that I shouldn't be talking to that guy because that guy
was out of his allotted band I'd likely say "Buzz off Slim/Brian. You're
in no position to 'know'". And besides it's none of YOUR business, just
as it's none of your business how Dave handles his on the air contacts.

>Odd, a half century ago and during four periods subsequent, I've
> operated over much of the HF spectrum without any morseman-
> ship necessary or needed.

You have not "operated" on HF, Lennie. You were involved in the emissions of RF at frequencies in the HF range, but in the context of Amateur Radio, you have zero point zero hours of experience.

This IS an AMATEUR RADIO forum, afterall....

>Ah, you are referring to AMATEUR radio where a number of
> amateurs consider morsemanship to be of the paramount skill
> accomplishment...and therefore being a "qualifier" for permission
> to operate in small slices of the HF spectrum.

Nope. The Code Test is only 1/4th of the examination criteria, and that dictated by the United States' compliance with treaties to which it is signatory.

That YOU don't consider it relevent is laughable and in itself IRrelevent. Persons with actual communications law experience have disproven your rants already. Take a hint.

>That's still curious...other radio services do not have this
> "qualifier" yet the amateur still considers it a necessity.

Other "radio services" are not covered by S25. ONLY Amateur Radio.

>It seems
> to be the only radio service requiring that qualifier

Duh...ya think?

>Do you sense any illogic there?

Only since the law that still requires it is an international one, and is up for review THIS year.

>Or isn't it just an emotional mindset based on
> some odd territorial imperative held by those wonderful olde fartes?

Nope. Just the law. You DO believe that a peaceful society must have laws which are changed by peaceful means and majority rule, don't you, Lennie? Or are you an anarchist...?!?!

>No problem. Bigotry exists in human society in many guises.
> I've seen enough of it in seven decades of existance...actually
> quite enough by the third decade. Does your comment mean
> that you condone bigotry by self-styled supremacists?

No one "condones" self-styled supremacists, Lennie, but we do TOLERATE
you.

>I don't condone it, nor appreciate it, nor accept it. You may have
> noticed some of that in here...

Yep...From "Lenof21", "Lenover21", "Averyfineman", "NoCWTest" and others
emanating from your keyboard....

>Sorry, but all those sub-bands are there to satisfy the needs of
> some olde fartes, a sort of spectral clubroom away from the
> main hall of the lodge, isolated so as to not upset the narrow-
> banders seeking refuge from the turbulence of the mainstream.

The FCC recognizes those "sub-bands" as necessary in order to allow equal
access and minimal interference between mode users. You milage varties, but
then you're on the wrong side of the road, too!

>ARRL caters to the olde farte mentality, the traditionalists,
> the certificatists, those wishing (sometimes desperately) of a
> lifestyle away from reality so that they achieve some sense of
> self-importance.

Oh...?!?! I see no restrictions on membership by license class.

>Since ARRL has a virtual monopoly on US
> radio amateur publications, ARRL can exercise influence on
> the "amateur community.

I see no exclusivity in the topic matter of any of thier publications,
either.

>ARRL still does not understand that and may not
> until there is a full turnover of all its managers and directors.

The ARRL seems to understand fine. From what informed position do you
make these observations? In what programs are you active? What ARRL field
organizations are you an elected member of?

>Of course...and by extension, all of the ham operating "skills"
> are then based on childhood pursuits or are childlike? Are
> all the olde farte mentalities grounded on some childish game
> of "king of the hill?" Perhaps so.

We see who would be "King Of The Hill", Lennie...

>Now, I'm not criticizing you or your daughter, Bert, but parents
> are seldom able to evaluate their children objectively, regardless
> of their claims.

I am still awaiting Lennie's revelations as to how many children he has sired and raised. He loves to insist that age limits be imposed on Amateur Radio, and frequently makes these assertions on how parents are unable to make objective assessments of thier kids skills, performance, etc.

>Children aren't the issue. Regulations affecting
> the entire citizenry of a country are the issue.

So far you have yet to demonstrate that there is ANY precedent for changing ANY regulation as a result of negative impact to ANY radio service, ESPECIALLY Amateur Radio, vis-a-vis licensure of adolescents.

Not one iota.

More unsubstantiated rants from someone with no qualifications from which to make them.

YA PUTZ!

Steve

Ain't it just funny how whenever the topic of
relaxation of the code requirements come along
it always merits a goofy response by the "true believers"

I mean these CW diehards are just as committed
and ready and goofy enuf to lay down their life for
the cause!

They remind me of the Pallie Suicide Bomber,
all-ready-to-go with his explosives belt securely
strapped on, waiting at the bus stop for the #43
to Hebron....

Or a kook Larouche plebe, ready to pounce on you
at the airport because you must know that the Queen
of England is REALLY a space-ailen from the planet remulac....

Or an ailen abductee from the Raelian cult who just
cloned your baby.....

How I love he convoluted logic of these CW mullett-heads!

You have to really wonder if those voices they claim to
be hearing from the "Space Brothers" on 7.2-- Mhz or
on Art Bell's radio show can be "cured" with a good
regimine of Prozac, diet and exercize....

Oy-Vey!

"Only two things are infinite, the
universe and human stupidity, and
I'm not sure about the former."
- Albert Einstein (1879-1955)

"I was frantically spinning my chair away from the screen and covering my
daughter's eyes with one hand while trying to click the picture away, but
as soon as I did MORE pictures popped up, and then more, covering the

screen with explicit images of people and animals and possibly, at one point, Elmo..... I finally had to turn my computer off to make it all go away."

- Dave Barry tries to find "Elmo" on the web for his daughter of two.

Which does not make my previous statement any less true.

>S25.5 does not "limit" anyone...(SNIP)

In this case it does, Lennie, as demonstrated to you by Counsellor Kane on several occassions before. The entire S25 package has been ratified by the Congress of the United States and is therefore part of American law.

It DOES limit a LOT of "someones"

>Japan has waived Recommendation S25.5 for a certain class of
> their amateur license which does have HF privileges.

Hurrah for Japan. What part of JAPANESE law am I obliged to observe when I am NOT in Japanese territorial control?

>>Nothing strange about that...it's been that way for decades.
>
> That it was "always so" is not a valid criterion for an ITU-R
> Recommendation.

You quoted me as saying "always so". That's not what I said. I said that it's been that way for decades...Certainly a long time, however NOT "always". Please stop misquoting people.

>Neither is the FCC
>>> "subordinate to Congress." FCC is not part of the Legislative

Good idea! Lets apply that to my own experience:

I'll probably never do satellite comms, so I want no questions about that on my test.

And they have a lot of nerve having questions about Maximum powers, because I don't ever plan to operate over a hundred watts. Get thos questions out!

I don't have enough space to put up a 160 meter antenna, so why should they ask me any questions about the band edges at that frequency?

> These people would be an asset to the hobby, yet the code is a
> hinderance.

That is a good excuse.<not> How are people who refuse to learn something because they don't have the initiative to learn something they might not like going to be an asset?

> (what Engineer who puts in 9+ hour
> workdays and has a family has the time to learn code?)

I work 50+ hours a week, am Captain of an ice hockey team that plays 2-3 games a week, and while I was studying for my ticket, I was ferrying my son around with his ice hockey team. I have other hobbies too. These must not be very energetic engineers!

Let's see.. They have an electrical engineering degree. How hard would the theory be. Oh gee, they now have to read the rules and regulations. That should take an evening at worst case scenario.

The code would take how long? And no plans to use it.

Mike, my suggestion would be a test watered down to what most folks seem to want. Two questions, plus a bonus question.
1) What is your name (you may not pull out your driver's license - spelling counts)
2) What is your address (ditto spelling and driver's license)

passing is 50%

bonus question (in case you fail both the above questions) worth 50 points
If you have a picture of your radio, point out the power switch. If you don't, we have a light switch here in this room. It is currently turned 'on'. If you can turn it off, you score 50 bonus points

Umm ... WPM ... you mean 'words per month'? My guess on all of this is that
if you use very tiny bandwidths, you eliminate noise - and also limit your
data rate. Neither bad nor good, it becomes a trade-off.

The comments about 313 and 275 do not apply to MOST of the actual amateur licensees. If you take a listen you will find that the TRASH is coming from the NO CALLSIGN individuals.

This does not apply to KB1EVE, or WA9KJI.

That's pretty much the case for me. Took me 6 months of around an hour a
day study. For most people it would take a fair amount less time. And
I'm 90 percent digital (computer) modes 10 percent contesting

The written test took around a week of brushing up, was no sweat
whatsoever. For some others it would be.

To me, it boils down to: If you want it, this is how you get it. I wanted
it, I learned Morse. These others just don't want it that much. Their loss.

The real problem in this newsgroup is dealing with the reality that morse code is not even 50 percent of the average operators air time.

With the thinking that I have observed, everyone should have to learn how to ride a horse to get a drivers license.

From: "N3THJ" n3thj2000nospam@hotmail.com

>Honest code elimination question...no flames please

Too late. (See posts below).

From: "KB9TMP" kb9tmp@juno.com
>I hope they don't
>get rid of the 5WPM test. Now I'm glad I had to
>do it! I learned something I otherwise never would
>have tried to learn.

Do you often not like doing something and then enjoy it after you are pressured to?

From: "Radio Funtimes" stinkyhamops444@yahoo.com
>Bill, I know 4 good Electrical Engineers who would
>get their ham ticket tomorrow if they did not have
>to learn the stupid arcane archaic code. These people
>would be an asset to the hobby, yet the code is a
>hinderance. (what Engineer who puts in 9+ hour
>workdays and has a family has the time to learn code?)

Good point.

You can get a technician class license and not have to learn code. However, its also the Ham culture of Q codes, rituals, appliance operator oriented, not technical (except antennas - to outfit radios) hobby that scare away EEs.

Despite the hype of it being a technical hobby, most Hams are uninterested in this aspect. Since most Hams do not share their interests EEs don't want to join.

From WA8ULX:
>If they dont have enough time to learn the code, then how will they have
>enough
>time to operate?

Why should they learn an irrelevant skill at all? Why make time for something of no interest? Also, when it is in line with their field, it is easier to justify and make time for.

From Dee Flint, N8UZE
>If they don't have time to study the code, then they don't have time to
>study for the written tests either. Afterall a good percentage of the tests
>are rules, regs, operating practices, propagation, etc. You can't pass it
>on electronics theory alone.

Like I said above, the written material is related with their field, so it is easier to study for this than the code.

From Mike Coslo:
>I'll probably never do satellite comms, so I want no questions about that
>on my test.
>
> And they have a lot of nerve having questions about Maximum powers,
>because I don't ever plan to operate over a hundred watts. Get thos
>questions out!
>
> I don't have enough space to put up a 160 meter antenna, so why should
>they ask me any questions about the band edges at that frequency?

You may never plan to do those things, but you may end up doing them anyway. For example, at Field Day. Therefore you should be tested on this. You will never use Morse, so you should not be tested for it.

Also, its also wrong to link Morse code to the higher license class. Its not just a matter of not being tested on it. Its linking it to an unrelated (technical) license class test.

>That is a good excuse.<not> How are people who refuse to learn something
>because they don't have the initiative to learn something they might not
>like going to be an asset?

How about the Ham culture that says you must learn Morse code, and not those other things? You don't seem to be against Hams not learning those other skills.

From: lenover21:
> Perhaps the QPC syllabus should have questions on a right
> attitude? Belief in olde tyme hammus superioris? Strict
> adherence to tradition, jargon, methods, standards and
> practices? Marching in ranks to the same drumbeat?

Ham radio is a cult. If one observed Hams at some club meeting and Hamfest one would see this. You must believe and follow the traditions if you are to be a Ham.

They would know <most of the> written material, so this would take alot less time. On the other hand, it would take alot longer to learn the code. So, they would have time to learn the material, but not the code.

>It's like saying you are not going to join a club or
>lodge simply because you don't like one of the members.

Not exactly. Even though many aspects could be possible, the Ham culture is heavily sided towards contesting, operating, Morse, and antennas.

The orginial point was why should the engineers even have to learn the code.

Would an electrial engineer be an addition to a hobby that is interested in electronics?

You have jumped to conclusions that I neither stated nor implied. My statement was simple. That is if they don't have time to study one part of the material, they don't have time to study the rest of it either as the written portions will also take time and effort. I did not imply nor state that any particular item was better or worse than another or had any particular virtue.

However, I will not be drawn into further discussion on this topic with you as I have already seen on this newsgroup how you extract conclusions not stated or even implied in the postings to which you respond.

The general and Extra tests are just as easy as the technician class test. The test can be learned in 8 hours, WITHOUT an EE degree. Are you saying, one 8 hour session on a weekend is too much time? These are 8 hour "license in a day" classes, where the test is given right after these classes. At least 75% of those pass on the first try.

Your conclusions below are illogical. I have not stated that there is any particular virtue in any particular test element in this thread. If they don't have time to study one element, they don't have time to study the others nor will they have time to operate. Therefore "lack of time" is an irrelevant argument. For example, if someone said "well I can learn Morse code quick but don't have time to study the written," I would consider that just as much of a "lame excuse" and not a reason to change the written requirements. The requirements are stated, we don't have the power to change them unilaterally. Anyone who lets something like this hold them back is being silly. It's like saying you are not going to join a club or lodge simply because you don't like one of the members.

You have to MEMORIZE not just read the rules, regs, operating procedures,
etc. That takes time. Very few engineers have a photographic memory. Even
with an electrical engineering degree, it will take probably 30 hours to
learn all the stuff for the tech test and another 30 for the general. Now
there are exceptions but the guy who read the book one night and passed the
test the next is NOT representative.

No an electrical engineer would NOT know "most" of the material. The bulk of the material is rules, regs, operating procedures, propagation, station setup, digital modes, etc. The electronics is only a small portion of the testing.

Sorry to tell you Dee....but the short term ham license appears to be the 'standard'. Folks dont know what PEP is, or how to measure it for the various modes. They don't know the basic 468/Fmhz formula for a 1/2 wave in free space dipole.

Etc. Etc.

But they are dang good at screaming 'contact', and such as that.

Can someone help me here? What is a signal report of 7 by 9 mean and what the heck is Seventy Thirds?

Dan/W4NTI

Have you taken the General and Extra. They are not as easy as you imply.
As far as these "license in a day" classes, they are a serious disservice to
the prospective amateurs who take them. The material goes into the
individual's short term memory only rather than in the long term memory.
The objective should be to get this into long term memory so that you can
access it when you need it. Thus a few days after the test the person has
forgotten most of the material that he/she has studied. So now you have a
person who has passed the test and yet has almost no more knowledge than an
unlicensed individual since they will not retain it more than a few days.

The "license in a day" classes would be good as a test preparation for some
one who has taken the time to learn the material before the class.

Sounds like your fire repeater has a deaf receiver (partially fried front end)
that greatly reduces sensitivity without killing it completely. Or bad coax
(water got in?) And that the
people responsible for its maintenance are not doing their jobs.

> 5 watt ham HT's seem to
> have twice (or more) the coverage area than our stinkin' fire HT's while

Around here, in NNJ, the local power company is called "Public
Service". And if their powerlines are creating RFI, well that could
be another thread with the same title "Public Service and Ham" :-)

I don't quite understand why you think Morse is necessarily "aperiodic" (that's a function of how it is sent, it can be sent with very precise timing), but "optimum" is a quality whose evaluation is highly dependent on the system and the attributes of the system which you value. It is true that if maximum instantaneous power is limited then fully-voiced binary FSK and PSK modulations have an inherent 3 dB advantage over amplitude keying at the same information rate, but it requires significant additional transmitter and receiver complexity to implement these, particularly in the presence of ionospheric paths causing phase and frequency flutter, so what is "optimum" depends on one's evaluation of whether the additional system complexity is justified to achieve a 3 dB advantage. Note that production services running at similar frequencies often come down on the same side of this tradeoff. Of the time services I know of I think WWVB and MSF both use amplitude keying (though "off" isn't all the way off, but rather 10 dB down from "on") while I think DCF77 uses PSK. Loran C uses pulse modulation, but this is only advantageous if you have no bandwidth or instantaneous power limitations and solely need to optimize the cost of your power bill.

Once you've decided on amplude keying, however, Morse coding isn't identifiably inferior to anything else. Its duty cycle doesn't often drop much below from 50% independent of what is being sent, and it provides a measure of compression for plain texts. Note that FEC doesn't automatically buy you anything much, it requires a coding-gain-versus-information-rate tradeoff which you need a lot of system knowledge to judge. I understand that the hobbyists doing LF experimentation under Part 15 have tended to use either slow Morse or slow BPSK using PSK31 coding and FEC, and while I think the latter is considered to give better results I don't think it is a whole lot better.

Bad math, I think. PARIS is 50 dot periods, or 1 word every 50 minutes,
so the word per minute rate is 1 per 0.833 hours, or 0.02 WPM. Still
not too fast, though.

Dennis Ferguson

Learning the code was a huge sink of time. Trying to use it was
another "less than useful" sink of time.

I see that you never spent enough time at it to become "proficient"
(proficient in the words of Larry, Dick, Dave, et al).

Responding from the TOP,

"Very Tiny Bandwidth" is a bad thing?

"Limited Data Rate" is a bad thing?

Perhaps by "words per month" you are implying that these world record setters are NOT proficient?

I'd be disinclined to believe that. For example, you and Dave didn't know that a Commander had the authority to grant amateur operations in Somalia.

You and Dave would knowingly work out of band Frenchmen on 6M.

You cannot figure out how to operate amateur radio away from the power mains.

That's just some recent stuff. I don't have any more time to devote to your ineptness.

> If I was in QSO with a foreign ham and some clod came on the frequency

Who's talking about "some clod???"

I said you already knew the French allocation on 6M, yet you intend to go ahead and work them out of band.

You don't disagree. The poops on your face.

>So much for it being a "dead mode" of little use.

Bill:

Unfortunately, I don't think us Morse Code supporters can look to
this story as proving anything too significant about the Morse code.
I'm sure it was employed mainly as a matter of convenience, as
opposed to formulating some other encoding system specifically
for this VLF project. I just wonder if something like Hellschreiber
would have worked?

Let's face it -- I'm not interested in a CW QSO in which I need to
use a stopwatch in order to copy what the other station is sending!

Brian:

According to Dennis Ferguson, 0.02 WPM. Unfortunately, Jim Hampton
beat me to "words per month" -- but it is a riot, nevertheless!

Considering the soporific data-rate imposed by the 136 kHz band, I don't think
I'm going to be giving it a try any time soon. I can hardly stay awake during
a
5 WPM QSO as it is.

Neb:

Not unless they used their "fists" to place a brick on the key to hold it
down for the eternal duration of their dits and dahs! All joking aside, I'm
sure the "keying" was done by a relay controlled by the software they
used to receive and analyze their signals.

I don't consider this to be a valid code/no-code issue. As Len
Anderson already pointed out, many other coding schemes could
have been employed -- I'll just assume that Morse was more
convenient for technical reasons. This is obviously not a method
of data communication of practical use to professional or amateur
radiocommunicators unless it can, somehow, be speeded up to a
productive level. I, being a long time afficianado of digital modes,
would expect that if frequencies in the 136 kHz range are to become
practical, it will be some kind of computer-based two-way system,
and not manually keyed CW, which obviously works better at
much higher frequences -- like 1800 kHz!

Dee:

Agreed. However, those actively interested in the elimination of the code
testing requirement are not likely to do so. They will more likely wait and
see what happens in Geneva this Summer than proceed to learn a fun and
useful communications skill in order to attain full amateur privileges.

> on any available radio frequency during an emergency. (snip)

You're referring to Sec. 2.405 and Sec. 97.403 of Title 47. The first is a general provision relating to all radio services licensed by the FCC (except broadcast and amateur stations) and the second is the Amateur Radio specific provision. Both provide wide leeway when it comes to emergency communications involving the "immediate" safety of human life or protection of property.

However, an emergency involving life or property is not the sole test. Both provisions include an additional requirement - "in which normal communication facilities are disrupted" or "when normal communication systems are not available." A ham operator volunteering for a fire department with it's own radio equipment would not meet this additional requirement.

> Unfortunately, it is being learned that the frequencies of
> fire, police, ambulance, etc., are inadequate--due to the
> fact that they cannot communicate with each other. After
> all, that is one of the many fundamental reasons for the
> amateur radio emergency communication network of services:
> the abiltiy of emergency organizations to communicate with
> each other. (snip)

I think you're comparing apple and oranges, Kim. The public safety frequencies are not normally inadequate. There are a wide range of frequencies available (HF, VHF, UHF, and 800MHz), allowing communications under almost any circumstance. So, instead, I think you're talking about extreme situations (disasters such as hurricanes, floods, etc) where normal communications is disrupted. And, of course, I agree with the concept of using ham radio here. However, this is not what the guy was asking about. He was asking about routine fire department communications when there is no unusual disruption of normal public safety radio communications.

> That is why I would support the purchase of ham radio
> equipment by emergency organizations -- and its use if
> the situation warrants. (snip)
>
> (snip) Remember, I am talking about the use of amateur

> radio frequencies by emergency organizations (or anyone,
> for that matter) in an emergency situation.

If you're talking about use of that equipment by unlicensed employees of those emergency organizations (unlicensed in ham radio), be careful to note the concept of "immediate" safety of human life or protection of property. They cannot use that equipment for routine calls, routine dispatch, or any other routine communications. That would require a licensed ham operator as the control operator (operating under the terms of the Amateur Radio rules governing supplemental public service communications).

> The rules governing ham radio would be that an emergency
> is defined as any threat to life or *property*. Fire is
> a huge threat to property, correct?

Not all fire calls involve the "immediate" threat to life or property. Many fire calls turn out to be false, for example, offering no threat to life or property. To meet the requirements of Sec. 2.405 and Sec. 97.403, there would almost have to be a person at the scene of a clear threat with no normal communications available. A dispatcher relaying a call of a fire would not meet those requirements, nor would a firefighter on the scene with a fire department radio clipped to his belt or installed in the truck.

> Recommendations for amateur radio.

No it doesn't. S25 is not an ITU-R Recommendation (let alone a set of thiem).
S25 is an Article in the Radio Regulations. If you go to

http://www.itu.int

and attempt to buy the publication which includes S25, you won't find the
document in the ITU-R Recommendations publication section. It is in the
Radio Regulations.

> S25.5 is the specific Recommendation in regards to
> administrations giving International Morse Code testing for
> any amateur radio license having privileges below 30 MHz.

S25.5 is not a Recommendation. It is a paragraph in Article S25 of
the Radio Regulations.

> S25.5 does not "limit" anyone, since it merely indicates
> a frequency below which licensees should (not shall)
> demonstrate the ability to receive International Morse Code
> by ear and send by hand. Note that ITU-R Recommendations

> are just recommendations, not commands or regulations to
> be obeyed.

This is confused, I think. ITU-R Recommendations are standards documents which are produced by ITU study groups. They are indeed just recommendations, having no regulatory standing on their own. An administration may voluntarily choose to incorporate them in their own regulations if they want to, or sometimes ITU-R Recommendations are included in the Radio Recommendations by reference, in which case such Recommendations do become regulations of sorts.

The Radio Regulations, where paragraph S25.5 can be found, are not ITU-R Recommendations however. They are not produced by ITU study groups, but rather are the products of World Radiocommunication Conferences. As the name suggests, the Radio Regulations are in fact regulations, which member administrations do indeed agree to obey. In effect the Radio Regulations are a treaty which administrations enter into, and it would not even surprise me if the Radio Regulations were subject to congressional ratification in the US (though I don't know for sure).

> In the USA, the "send by hand" portion of S25.5 is an optional
> waive for all examinations. Administration members of ITU-R
> are not obliged to precisely obey all recommendations.

This is incorrect, Part 97 doesn't make an "optional waive" of any portion of S25.5. S25.5 says that a licensee must have proven that they can correctly send by hand, but does not explicitly indicate what consistutes proof of this. 97.503(a) explicitly (and not coincidentally) says that

(a) A telegraphy examination must be sufficient to prove that the examinee has the ability to send correctly by hand...

so Part 97 goes out of its way to indicate that such proof is non-optional. That 97.509(g) says

(g) Passing a telegraphy receiving examination is adequate proof of an examinee's ability to both send and receive telegraphy

is simply a choice for what constitutes "proof" deemed sufficient to meet the (non-optional) regulation. Specifying this testing procedure as sufficient to meet the (unspecified) requirement for proof in S25.5 seems not inconsistent with the specification of 5 wpm as sufficient testing speed for S25.5 purposes.

> Japan has waived Recommendation S25.5 for a certain class of
> their amateur license which does have HF privileges.

I have no idea how Japan justified that, but I would be exceedingly surprised if the US decided to do anything similar.

The US already has the reputation of being an international bad boy when it comes to both adopting ITU Recommendations (for example, US

telecommunications companies ignore a ream of ITU Recommendations
for transmission facilities in favor of sometimes-nearly-compatible,
sometimes-incompatible ANSI standards; the Internet came to be by
studiously ignoring a different ream of ITU standards documents),
and by insisting that all sorts of exceptions and frequency misalignments
end up being included in the Radio Regulations themselves (often
inspired by military and other government requirements and preferences).
As the major source of international (tele,radio)communications discord in
defence of the interests of both US industry and military, however, the
US does compensate by being religious about observing the letter of
anything they've actually ended up agreeing to do, and that includes
the provisions of the Radio Regulations.

> Administrations are free to impose morse code testing for all
> amateur licensees if they so wish, or partial morse code
> testing for privileges above 30 MHz. It is all up to each nation's
> administrations.

What the US administration isn't free to do, however, is to entirely
eliminate all testing of Morse code skills for privileges below 30 MHz,
since by agreeing to the Radio Regulations the US has agreed to observe
this requirement in its own regulations.

Part 97 completely conforms to the regulations in Radio Regulations
Article S25, as far as I can tell. This won't change unless S25
changes.

Nonsense. Engineers are ALSO cognizant with regulations and
procedures...of considerably more radio services than just
amateur radio. They must also keep up to date, not only on the
new but that which is being developed...rather than stay frozen
in some strata of time on standards and practices of more than a
half century past.

No, you are presumptuous in relating an aural-mental cognition skill about an aperiodic monotonic on-off pattern coding (morse code) AS IF it were exactly the same as knowing about regulations, theory, operating practices, etc. It obviously isn't.

>I did not imply nor state
>that any particular item was better or worse than another or had any
>particular virtue.

Ah, but the implication was clear to many. Witness the responses you've achieved.

>However, I will not be drawn into further discussion on this topic with you
>as I have already seen on this newsgroup how you extract conclusions not
>stated or even implied in the postings to which you respond.

You are miffed? :-)

You've already been drawn by making your first posting. There is no erasing of anything. Further denial or claims to the contrary is invalid.

You've related ALL test elements as some sort of "time in taking" concept...as if all had the same basis for comparison. They don't. Aural-mental cognition is NOT the same as intellectual knowledge (broad, general use of "intellectual") required on the written test elements.

What you previously wrote was:

>> >If they don't have time to study the code, then they don't have time to
>> >study for the written tests either.

Invalid. That equates skills necessary for test passing as the same for all TYPES of test elements. Those skills are NOT

the same. That should be obvious.

Let's consider the test elements from the FCC's probable point of view. They are the only USA agency granting US amateur radio licenses so that should be fair. The FCC has many regulations about US amateur radio and those regulations are of many types, from frequency allocations to modes and modulations to classes of licenses to quite a sizeable number of technical regulations. In none of those regulations does the FCC demand that OOK CW codings be done over and above any other allocated mode, any allocated band, by any class of licensee. Mode and modulation are all optional to use...yet there is only a single mode that has ever been required in a license examination, morse code.

The FCC has stated 13 years ago and again 4 years ago that it does not consider morse code skills as viable for its purpose in determining whether or not a license applicant should be granted that license. That should be a clue...but those who have bought into the concept of morse code skill as a prime requirement in amateur radio cannot accept it.

The retention or elimination of US amateur radio examination test element 1 is NOT about "time." It is about whether it is useful to the only agency that grants US amateur licenses. Archaic Radiotelegraphy Service operators cannot rule over the FCC no matter how much they demand that others do exactly as they did...once.

Hey Dennis- Thankyew. I for one very much appreciate your very objective evaluation as opposed to
the very crippled,opionated diatribe by
Len-way-the-hell-over-21-but-acts-like-5.

I must also congratulate you on the fact that every time you evalute something in a post here, it comes
out the same-very objective and undistorted. I have no idea what you do for a vocation but in my view
your employer, assuming you have one, is very fortunate to have you on board.

73, Dick

Yup. You did say that. Which means you don't know *any* rapists at all, or
you know rapists and Brian asked you how many. *You* keep practicing.

Brian, the conclusion is fast becoming inescapable that you're losing whatever reasoning powers you
may have once had. If you can't differntiate manual Morse code from that used by the very slow code
experimenters you're about ready for the looney bin.

Oh, that. Well, Larry. Contrary to however you think that is supposed to
do anything--it does nothing. I consider the source, in your case, and from
others it's not much different. What you have "delivered," Larry, is not
criticism in any way. It is nothing but prejudicial crap, innuendo,
rhetoric, and a display of your inability to communicate at all. Effective
communication has an effective impact. Remember that.

Be glad to inform you, Slim. All it takes for most comuter programs I've seen to copy
garbage is any sort of
noise in the circuit. Or code which isn't near-perfect in its timing, such as some of that
sent by a bug or
some (many?) inept handkey senders.
Of course with your very crippled analytical abilities you have trouble putting facts
together to reach a
valid conclusion, as always.

> 73 de Larry, K3LT
>

It's still interesting it was CW that was the first mode used instead
of psk 31, rtty, or anything else.

Hey Dan? Really. C'mon. There's got to be things about amateur radio, scientific and non-scientific that you've missed or don't know. Or do you know everything there is to know about it?

By the way--I know about PEP. I know that I don't want to be bothered with it, so the most power I'll ever run is about 50-100 watts. So, why would I have to keep that knowledge up in my brain? Are you a walking, talking encyclopedia of amateur radio. Have you retained absolutely everything you ever learned about amateur radio?

The items of which you speak above, by the way: the 7X9 signal report and people saying Seventy Thirds? You complain first of people not knowing what you believe to be some pretty important aspects of ham radio, but end with complaining about something pretty trite--the way someone chooses to communicate though they are within the rules and regs. Which is it that bothers you the most? Because I've heard some pretty darned "learned" ham radio operators that communicate like idiots. And, I've heard some pretty darned dumb amateur radio operators that communicate like experts. So, Dan, what is that you're actually angry about?

Like I said, some clod -like you- comes on the frequency and yells "Hey that Frenchman you're talking to is
out of his band!" and now that constitutes "knowledge". So much for your grasp of that term, too.

Do you know very much about ANYTHING at all?

At the risk of turning this into a productive thread and getting an education, (always dangerous here in rrap!) What is the rationale for such slow data rate transmissions? I certainly would expect slower than normal for these initial tests, and of course the bandwidth at 136 kHz is limited, but I'm curious. Seems like since computers are doing the work, it would be possible to send at a more "normal" rate.

I am confused by the above, Dwight--and I am not meaning to be smart-assed,
either. There would be nothing wrong with a ham radio operator volunteering
to use ham radio equipment owned by the fire department, in an emergency or
not I should say, would there? There would also be nothing wrong with
anyone (firefighter or not) using that same equipment in an emergency that
met the criteria you describe above, correct?

> >
>
> I think you're comparing apple and oranges, Kim. The public safety
> frequencies are not normally inadequate.
>

OK, I'll accept your assessment by things you've heard and understood. But I am stating that, from what I have heard and understood, the public safety equipment (not frequencies, per se) is wholly inadequate for emergency situations involving a need for varioius departments to communicate with each other. I know this by critiques I have heard about the tornadoes that struck OK down here a few years back; the critiques I've heard of the 9/11 disaster; and the critiques I've heard of the Shuttle Recovery mission--to name just a few.

>
> There are a wide range of
> frequencies available (HF, VHF, UHF, and 800MHz), allowing communications
> under almost any circumstance.
>

I don't think I have to clarify that the *availability* of frequencies alone does not infer adequate communication abilities. Our agencies must have the appropriate equipment, networks, and communication standards in order to avail themselves of the *available* frequencies. It is the equipment, networks and communication standards that inhibit the abiltiy for adequate communication, and it is that those agencies are funded by the public that is the reason. When budgets come up, most elected officials are unwilling to prepare for "whatifs" when they real situations going on presently that they must come up with funds for.

>
> So, instead, I think you're talking about
> extreme situations (disasters such as hurricanes, floods, etc) where
normal
> communications is disrupted.
>

Well, extreme, and even "normal" emergency communication. I mean, to what extent *do* we define an emergency? Is it limited by the number people? Dollars? If I'm in a burning building and I am the only person to be rescued by that fireman who is carrying a ham radio--I am pretty sure I want him using those frequencies where "his" frequencies won't work!

>
> And, of course, I agree with the concept of
> using ham radio here.
>

And, I agree with using ham (or any available affective) radio *any* time there is a defined emergency (left for interpretation, by the way, for that

reason--I believe). But, aren't we discussing the interpretation of the Rules & Regs?

>
> However, this is not what the guy was asking about. He
> was asking about routine fire department communications when there is no
> unusual disruption of normal public safety radio communications.
>

OK then, in *that* case, I'd say the Rules & Regs don't support his use. And, that is what I clarified, right? I hope I did. Routine communication does not fall within the category of emergency. BUT--what is routine? It is routine for a fire department to respond to fires every day. Those fires are emergency situations.

>

as
> the control operator (operating under the terms of the Amateur Radio rules
> governing supplemental public service communications).
>

I think, and I bet, that the interpretation of routine is where we may be ending up here. Fundamentally, for the sake of debate, if an emergency organization is dispatching personnel and equipment to an emergency scene, or is at that scene needing communication, I believe the use of any available radio is appropriate and legal. While it is true that there is not a predominant use of ham radio by our fire and rescue organizations--I still think that it could be argued in their favor if they did use radios on ham radio frequencies.

Phil Kane, if you're following this thread, what do you think? Remember, the debate here is pretty hypothetical, but what do you think?

> >
> > The rules governing ham radio would be that an emergency

>
>
> Dwight Stewart (W5NET)
>
> http://www.qsl.net/w5net/
>

True, on the above. However, if the dispatcher had "lost" the ability to communicate the relay of that fire with their normal radio and frequencies, there would be nothing illegal about using ham radio (or any other) radio frequencies for dispatch. The same applies on the scene. If the firefighter's radio clipped to his belt is not working; he'd be within legal parameters to grab the ham radio and use it. That's all I'm saying. I think we are actually in agreement.

Kim W5TIT
PS--while serious, I *do* get this funny image of emergency persons carrying dozens of radios on their belts! :o

You are wrong, I'm afraid. I am an EE, and I went in to take the Tech, as I had a no-code UK licence, and passed also the General and Advanced papers **without** reading the books for those elements. That's not reading them the night before, but actually not reading them atall. I don't think that would be rare for an EE, I think it would be quite representative, especially if we were talking about someone lke myself who had actually worked in RF. I didn't take the Extra written on that occasion only because they didn't have a spare element 4B paper, but I could have passed that too. I had of course read Part 97 more than just the night before, and I had read a book on elements 2 and 3A. Could I have just read Part 97 the night before and then passed all the written elements in one session? In my opinion, yes, although I had a foreign ham ticket as well as an EE degree.

73 de Alun, N3KIP

BTW, I am a 20wpm Extra, and I have never made a single CW QSO

Looks like a tight race between you and Brian for the crown in lack of
comprehension. At no time did I write that I know or don't know any
rapists.
That, of course, isn't an issue at all. I wrote "don't know of". You
both seem incapable of understanding what that means. The point is that
Brian's silly statement about "rapist mentality" and your equally
foolish followup comments are laughable.

Amateur Radio Newsline™ Report 1334 – March 7, 2003

Amateur Radio Newsline report number 1334 with a release date of Friday, March 7 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.

A national ham radio socierty on the brink of faiulure and how ham radio will survive in space while the shuttles are grounded. These stories are first on Amateur Radio Newsline report number 1334 coming your way right now.

(Billboard Cart Here)

**

INTERNATIONAL: COLOMBIAS NATIONAL AMATEUR RADIO SOCIETY SAVED BY A MIRACLE

Colombia’s national Amateur Radio Society has received a reprieve from extinction. At least a temporary one. We have this in-depth look at what happened and whats being done to save the L-C-R-A.

--

Colombia’s national ham radio society remains on the brink of being dissolved and you may soon hear very few of that nations hams on the air. This, according to Fred Laun, K3ZO in a report that originally appeared in a number of D-X newsletters. The reason? The economy.

According to Laun, his old friend Beto Rojas, HK3DDD, in Bogota informed him that postal rates in Colombia were doubled as of January 1st. That it now costs the equivalent of $2.00 U-S to send a letter to the United States. And as a result Colombian hams would have to pay the equivalent of 13 cents per QSL to send outgoing cards through the bureau.

That 13 cent fee would not be to bad except for the fact that the bureau probably won't be available much longer. This, because the Colombian I-A-R-U member society -- the Liga Colombiana de Radioaficionados -- L-C-R-A -- was to meet on Saturday, March 1st to dissolve itself. The problem is that L-C-R-A membership is down. It now only has 200 paid members. It also had the equivalent of 8000 United States dollars in debt. It’s leaders felt that it could no longer stay in business.

But says Laun, a miracle actually happened. At the meeting one of the members donated $7000 to pay off most of the current debt. So, L-C-R-A will continue to operate as Colombia’s national society for at least the next three months. During that time the leadership will try to figure out what went wrong and see if they can get the organization back on an even keel.

In a note to Amateur Radio Newsline, Laun says that several Colombian hams were apparently moved by the messages they received from around the world and have vowed to try to rescue their almost 70 year old society from the brink of oblivion. Even so, HK3DDD tells Laun that many Colombian hams have stopped calling C-Q and some have even terminated all high frequency operations. This is because they can no longer afford to handle the economic consequences of the demand for QSL cards.

Also says HK3DDD, some Colombian DXers who are still on the air are simply listening, searching and pouncing on rare ones these days. Instead of being the DX, they are selectively looking for new countries for themselves.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP .

--

The bottom line to all of this? H-K prefix hams may soon become very rare on the H-F ands and those whom you work may never be able to QSL. (K3ZO)

**

RADIO RULES: WRC-03 GETS US POSITION

The U. S. Department of State has forwarded several agenda items to Geneva as being this nations opening position at the 2003 World Radiocommunictions Conference. The most important of these relate to International Radio Regulation s-25 and its sub-parts. Included in the initial United States position is rewording S 25 subpart 1 to give member nations more authority to determine the points of communication of the amateur stations it has licensed. The suggested modifuication reads that administrators shall verify the technical and operational qualifications of any person wishing to operate an Amateur station.

The United States is also proposing to eliminate regulation 25.5. This is the rule that mandates Morse Code peoficiency examinations for all candidates for an Amateur license with high frequency operating priveleges. The United States says that its time to remove the Morse testing requirement and leave the decision as whether or not to test for code up to individual I-T-U mermber nations. (W5YI)

**

HAM RADIO IN SPACE: CREW OF 2 TO THE ISS

It will be a two man crew rather than a three man crew on the International Space Station until the U-S Space Shuttle flies again. But ham radio will remain on the air from the I-S-S as the investigation in the Columbia tragedy continues. Amateur Radio Newsline's Roy Neal, K6DUE, has more:

--

NASA'S WORST NIGHTMARE BECAME REALITY WHEN AN ORBITTING SPACE SHUTTLE BLEW UP, KILLING ALL SEVEN ABOARD AND PUTTING UNITED STATES SPACE ACTIVITY OH HOLD FOR AN INDEFINITE FUTURE. NOW, OUT OF THE DEBRIS, INVESTIGATION AND SORROW, NASA HAS BEGUN TO REORGANIZE.

ADMINISTRATOR SEAN O'KEEFE HAS TOLD A CONGRESSIONAL PANEL THAT AN AGREEMENT HAS BEEN REACHED WITH THE INTERNATIONAL PARTNERS. THE INTERNATIONAL SPACE STATION WILL CONTINUE IN ORBIT FOR AT LEAST THE NEXT 18 MONTHS.

THE TWO ASTRONAUTS AND ONE COSMONAUT ON BOARD WILL BE BROUGHT BACK TO EARTH IN LATE APRIL OR EARLY MAY ABOARD THE SOYUZ SPACE SHIP THAT'S DOCKED AT THE STATION. THEY WILL BE REPLACED BY A NEW CREW OF ONLY 2 PEOPLE, ONE ASTRONAUT AND ONE COSMONAUT, PROBABLY ED LU AND YURI MALENCHENKO, WHO ARE NOW IN TRAINING AT RUSSIA'S STAR CITY. THEY WILL KEEP THE STATION OPERATIONAL, EVE N PLAN TO TALK TO ONE OR TWO SCHOOLS ON EARTH EVERY WEEK. FUTURE CREWS WILL COPNSIST OF TWO PEOPLE FOR THE TIME BEING.

RUSSIAN PROGRESS SPACECRAFT WILL BE USED TO FERRY SUPPLIES, SOYUZ WILL CARRY PASSENGERS. ONCE NASA HAS FIGURED OUT WHAT CAUSED THE SHUTTLE COLUMBIA TO DISINTIGRATE, THEY HOPE TO FIX AND FLY THE THREE REMAINING SPACE SHUTTLES. THE BOEING COMPANY HAS BEEN ASKED TO GO TO WORK ON A NEW CARRIER TO AUGMENT THE SHUTTLE FLEET.

RUSSIA HAS AGREED TO ACCELERATE THE DELIVERY OF 2 PROGRESS RE-SUPPLY VEHICLES FOR A TOTAL FLEET OF FOUR THIS YEAR AND FIVE IN 2004 AND THERE IS TALK OF AUGMENTING THE SOYUZ FLEET.

EXISTING HAM RADIO EQUIPMENT ON BOARD SHOULD KEEP THE STATION ON THE AIR. OTHER EQUIPMENT MAY BE SENT UP IF NEEDED. THE SPACE AGENCIES HAVE COMMITED TO STAYING IN SPACE WHILE THEY MAP A FUTURE AND HAM RADIO IS AN INTEGRAL PART OF THAT ORBITING STATION.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE.

--

NASA says that having only two people aboard the I-S-S will help extend supplies while the shuttle fleet remains grounded. (NASA, ARNewsline™)

RESCUE RADIO: METRO-COMM AND THE NORTH-EAST BLIZZARD

A follow-up to our recent coverage of the severe weather that has blanketed the North-East in recent weeks. Steve Bromhead, KB2TRZ, reports that the Metro-Comm linked repeater system did yomens duty during last months blizzard.

According to Steve, their Snow Watch Net was activated for 42 consecutive hours handling storm related traffic for 12 counties in New York, New Jersey, Pennsylvania and Delaware. This included 10 formal messages to the National Weather Service office in My. Holly New Jersey.

Steve says that Metro-Comm is a linked repeater system covering Binginghamton, New York to Ocean City, New Jersey. The system has machines on 144, 220, 432, and 1296 MHz as well as a packet BBS. (KB2TRZ)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WD8AYE repeater and the Stark County ARES Net -- both serving Canton Ohio.

THE VEC SYSTEM: QPC RELEASES DRAFT GENERAL CLASS SYLLABUS

You have the answers. They have the questions. So says the Question Pool Committee of the National Conference of Volunteer Examiner Coordinators.

The Q-P-C has just released a draft syllabus for the new Element 3 General class Question Pool. This is the syllabus will be used when developing the new General class question pool that will become effective July 1, 2004.

This draft syllabus is available for download at www.arrl.org/arrlvec/pools.html. The public is invited to comment on this syllabus, as well as to suggest questions for consideration in the next General Pool.

The Question Pool Committe says that all responses must be received prior to July 15, 2003. Please direct your comments to the following people:
Scotty Neustadter, W4WW, Chair QPC email: W4WW@arrl.net
Bart Jahnke, W9JJ, Member QPC email: vec@arrl.org
Fred Maia, W5YI, Member QPC email: w5yi@w5yi.org
John Johnston, W3BE, Member QPC email: johnston.john1@worldnet.att.net (NCVEC)

ENFORCEMENT: NO RULES BROKEN

A ham accused of running a telephone call-in program on 75 meters has been cleared of any wrong doing. Amateur Radio Newsline’s Bruce Tennant, K6PZW has good news for one California ham:

--
Back on October 15, 2002, the FCC wrote to James S. Watkins, KI6GU, of Burbank California. This, regarding complaints that his station was involved in a telephone call-in like program on 3.830 MHz on August 16th and 24th.

The complaints alleged that Watkins had operated the call-in show using reverse phone patch. Copies were provided to him and the FCC requested additional information from Watkins in regard to that operation.

Watkins provided the requested information in a response dated last November 12th. Following a thorough review the FCC now says that that there were no violations of Commission rules since licensed operators were in control of the station during all transmissions. As a result the inquiry is closed and no enforcement action is deemed to be necessary.

For the Amateur Radio Newsline, I’m Bruce Tennant, K7PZW, in Los Angeles.

--

The FCC also thanked Watkins for what it termed as his quick reply and his cooperation. (FCC)

**

ENFORCEMENT: WARNING LERTTER FOR ALLEGED KEY-DOWN

A Michigan ham has recieved a Warning Notice from the FCC. This time the letter went to to George Albrecht, N8PGB, of Lansing , and says that the FCC is in posession of information alleging that Albrecht's station was the source of deliberate interference to the W8LCC repeater system on 442.025 Mhz.

The notice says that the interference took the form of unidentified transmissions and keying down to cause sound effects from a link to 52.525 Mhz. In its note the FCC warned all Albrecht of the possibility of fines and revocation proceedings against him if the alleged problems continue. (FCC)

**

ENFORCEMENT: NY CAR SERVICE FINED FOR UNLICENSED OPERATION

International Car Service, Inc. of Brooklyn, New York has been fined $10,000. This, for operating of unlicensed radio transmitters on 33.20 Mhz.

The original forfeiture order was issued on October 22, 2002 by the District Director of the Commission's New York Field Office. International Car Service never filed a response to the N-A-L. Based on the information before the Commission, the fine has been affirmed and International has been ordered to pay. (FCC)

**

ENFORCEMENT: HACKER SENTENCED

A federal judge has ruled that a California man who quit his job to work for a competitor and used his old computer password to snoop on his former employer must pay $21,600 and serve five years probation. The sentence comes after the San Dimas man pleaded guilty in September of 2002 to one count of illegally obtaining information from a protected computer

Until February of last year, the man reportedly worked for a contractor specializing in large retail buildings. After leaving that job to work for a competitor, the man admitted that he used a password to access its computer system more than 20 times. (Published reports)

**

FM AND REPEATERS: REPEATERLINK.ORG WANTS YOU

Hams and repeater owner operators interested in connecting their system to another cirty or another nation now have a new resource. Its in cyberspace at www.repeaterlink.org and once there you will find a growing list of who'se repeater is linked to where and how its being done.

repeaterlink.org is the work of Jim Willmore, KC9BIX. He says over several Internet remailers that his site is unique in that it lets you to search for

repeater systems that connect two different cities together or linked systems that have repeater in a specific city. It also allows hams who own a repeater system to log in and maintain your own system information in real time.

According to Willmore, repeaterLink.org is totally independant and supported by the ham radio community. It does not buy data from the FCC or the ARRL, but rather relies on the architects and engineers who own the repeater networks to register their own systems.

Again, that site is www.repeaterlink.org. If you have any questions about the site, email Jim at kc9bix@repeaterlink.org (KC9BIX)

HAM RADIO HONORS: NAB ENGINEERING ACHIEVEMENT AWARD WINNERS ANNOUNCED

The National Association of Broadcasters has honored a ham radio oprtator with one of its two, 2003 Engineering Achievement Awards for Radio and Television.

John Reiser, WQ4L, the retired Senior Broadcast Engineer of the FCC International Bureau, will receive the award for Radio. Robert Eckert, Branch Chief - Electromagnetic Compatibility Division, Technical Analysis Branch of the FCC's Office of Engineering and Technology, will receive the award for TV.

The Engineering Achievement Awards for Radio and Television will be presented at NAB's Technology Luncheon on April 9th. The NAB annual convention takes place April 5 - 10 at the Las Vegas Convention Center. The Amasteur Radio Reception is Wednesday April 9th from 6 to 8 P.M. right next door at the Las Vegas Hilton Hotel. The complete details are in cyberspace at www.nab.org/newsroom/pressrel/n2003/c2603.htm) (CGC)

**

CONVENTIONS AND HAMFESTS: THE ZL TECHNOLOGY CONVENTION

No plans for this springs Easter holiday? Well think down-under as in Hamilton New Zealand because that’s where this years Technology Convention will take place. The dates are April 19th and 20th at the Hamilton Astronomical Society meeting facility.

This years Technology Convention will be hosted by the Hamilton Amateur Radio Club. Plans for the event call for presentations on such subjects as microwave equipment construction, homebrew test equipment, APRS, 10 GHz ATV, plus others state of the art Amateur radio disciplines. And if the weather permits, some viewing of the Southern Hemisphere’s night sky from the facility’s optical telescope may be included.

Want to find out more? You can write to the New Zealand Technology Convention 2003, PO Box 606 Hamilton New Zealand. Or better yet send an e-mail to Gavin Petrie at gavinwp@ihug.co.nz. (NZART)

**

HAMFESTS AND CONVENTIONS: WEAK SIGNAL BANQUET IN DAYTON OHIO

Here in the United States tickets are now on sale for the 11th Weak Signal Banquet slated for on Friday night May 16th in Dayton Ohio. This is one of the largest gatherings of V-H-F weak signal enthusiasts held anywhere in the United States and is timed to coincide with the Dayton Hamvention. Cost is $35 per person and only 125 people can be accommodated. For information and reservation information take your web browser to www.wa8wzg.com and click on Dayton Banquet 2003. (WA8WZG)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

TRAVEL WARNING: DX'ERS ADVISED TO USE CARRY-ON LUGGAGE ONLY

If you are planning a D-Xpedition, you might want to think in terms of smaller being better. This following reports of vandalism to the luggage of a recent DXpedition by none other than those highly trained security folks at Seattle Washington's Sea-Tac Airport. Amateur Radio Newsline's Jim Meachen, ZL2BHF, in Auckland New Zealand reports on what happened to a bunch of DXpedition operators who were headed home:

--
When the D-Xpedition group returning from the recent AH3D operation reached Seattle for their connection to Copenhagen Denmark, all their Samsonite case's locks were been broken by the Sea-Tac Airport security people who just had to take a peek inside. The checking was done in a secure area of the Seattle airport. As most seasoned travelers know, security is supposed to find the passengers to get the keys to luggage that they want to inspect. In this case security simply broke into them, resulting in damage to the luggage and some rather messy repacking.

As a result of this experience, D-X'er Martti Laine, OH2BH, says he will be going hand carried from now on. When he operates the ARRL SSB Contest from the Canary Islands as EA8BH it will be using the new Yaesu FT-897. This is a radio that weighs in at only 8 and 1/2 pounds and can be toted along in the passanger cabin with him.

Laine says that EA8BH will be on the air on all bands using the new Yaesu radio. He adds that the QSL for this operation will feature information on this new, compact DXpedition, approach.

From down-under I'm Jim Meachen, ZL2BHF, for the Amateur Radio Newsline.

--

Several D-X publications quote Laine as saying that during these turbulent times it is advantageous to have all your equipment hand carried. He says that such rigs as the FT-897 and the FinnFet FF-1001 solid-state kilowatt will all fit into a small airline hand-carry bag. Laine adds that if you work him, QSL direct to OH2BH. (OPDX, others)

**

ON THE AIR: CELEBRATING THE FIRST NATIONAL WILDLIFE REFUGE

Meanwhile, closer to home, the Vero Beach Amateur Radio Club as announced a special evebt operation for March 15th and 16th. From 1400 to 2100 UTC both dats the club will operate station W4OT to celebrate the 100th Anniversary of the nation's first National Wildlife Refuge on Pelican Island. Suggested frequencies are 14.290, 21.360 and 28.390 Mhz. If you make contact QSL to P O Box 2082, Vero Beach Florida. The zipcode is 32961. (VBARC)

**

INTERNATIONAL - UK: THE RADIO COMMUNICATIONS FOUNDATION

The Radio Society of Great Britain has announced the launch of the Radio Communications Foundation. As envisioned. the new foundation will be used by the RSGB to channel all its work in the field of education and training. It will support the promotion of amateur radio to a wider audience in the U-K. The Foundation is being registered as a charity and will operate independently of the normal commercial activities of the RSGB. (GB2RS)

**

INTERNATIONAL - GERMANY: NOMINATIONS SOUGHT FOR THE HORKHEIMER PRIZE

The German national ham radio society -- the DARC -- is seeking nominations for the 3003 Horkheimer Prize. The award is named after Rudolf Horkheimer was one of the first radio amateurs in Germany. Its awarded annually by the DARC for contributions to amateur radio, its further development, and the goals of the society.

According to DARC, the prize can be awarded to one or more persons or institutions. Any member of an amateur radio society in the IARU is entitled to field a nomination and self-nominations are also allowed.

The 2003 prize will be awarded during the Ham Radio 2003 fair in Friedrichshafen. Nominations must be submitted by March 31st to DARC, Lindenallee 4, 34225 Baunatal, Germany. (GB2RS)

**

THE WORLD ABOVE 50 MHZ: QSOP PARTY HONOR ROLLS POSTED

Back here in the U-S-A, Tim Marek, K7XC, says over the W6YX VHF Reflector that the V-H-F Q-S-O Party Honor Rolls through September 2002 have been updated and posted to his website. The U-R-L is a bit complex to read, so look for them in the print edition of this week’s Amateur Radio Newsline report. You can find it http://k7xc.tripod.com/VHF_Records/index.html (K7XC)

**

DX

In D-X word that G3TBK, is returning to work in St. Vincent and will be active again as J88DR until the 10th of April. He will be on all bands from 80 through 10 meters. mostly CW. There may also be a possibility of some operation on 160 metres if he can find sufficient space for an antenna. All QSLs go to G3TBK, either via the bureau or direct. (RSGB)

And FO5RK reports that he is planning to be active again from Rapa Island through March 20th. Rapa Island is located in the Australs group, which counts as a separate DXCC entity from French Polynesia. QSL this one as directed on the air. (OPDX)

**

THAT FINAL ITEM: W2NSD ADVISES ON THE WAR ON TERRORISM

And finally this week a word on how to win the War on Terrorism without firing very many shots. It comes in some advice from 73 Magazine's Wayne Green, W2NSD. And as we hear from Blair Alper, KA9SEQ, Green has some rather interesting albeit offbeat ideas -- all using radio:

--

Writing in his March editorial, the prolific W-2-Never-Die quotes a rather strange idea he says comes from Newsmax.com. Its a story recommending that Israel set up narrow passages at every checkpoint with sandbags to absord any explosions. Then use UHF transmitters to detonate any explosives that a terrorist may be trying to sneak in. That says Green would get rid of a lot of suicide bombers in short order.

But Green takes it a lot futher. He suggests that the United States adopt a psychological approach to fighting terrorists. He says that we should set up a series of radio and television broadcasts in the Arabic language. He says that the programs would be made up of psychics supposedly interviewing dead suicide bombers who are screaming that they are roasting in hell and not enjoying the after-life that they were promised. The psychics would also claim that God is furious with them and has put a curse on their families.

Would it work? On this one we won't even venture a guess. But 73's Green does add this comment. He says that it is far better to outsmart enemies than to try to outfight them. It's cheaper, says W2NSD, and that it saves lives.

For the Amateur Radio Newsline, I'm Blair Alper, KA9SEQ.

--

Green also has some advice for the United States military on how not to fight a war with Iraq. That one you really have to read for yourself. You will find that information on page 4 of the March 2003 issue of 73. (73 Magazine)

Actually this ends up being quite common in the everyday world. I know many adults who have state that they are glad their parents made them take piano lessons or on the other hand regretted that their parents let them give it up. As kids, they did not like it but as adults their perspective had changed.

The same happens in college. For example, I had to take some computer programming classes even though I was in engineering not computer science. I did not care for it at the time. Yet later, this became one of my favorite job activities. I could have avoided jobs needing this skill but having it opened up more opportunities.

One could go on and on with examples of things that people are required to learn throughout their lives that at the time they don't see any reason for but later find useful.

You are definitely NOT representative of the typical EE. You already had a ham radio background so you already knew theory, propagation and operating procedures. You read Part 97 fairly thoroughly from your own admission. Thus you had done the equivalent studying. You don't have to use pre-prepared study guides but must learn the material somewhere, which is what you did. Even if you could have done it all in the night before that doesn't mean that every EE could have. A person doesn't have to use any particular method of learning or particular set of books.

Some one with ONLY an electrical engineering degree and no other background could have passed the tests with no further study. They aren't born knowing the material on rules, regs, propagation,etc and they don't learn it in college.

The books are merely a handy compilation of the material that will be addressed in the tests. There's no requirement to use that particular approach to preparing for the test. Since you had already covered the material by other means of learning and studying, it would have been pointless to have read them.

Dee Flint, N8UZE

It can't be proficient or unproficient. Are the two ops *morse
proficient*?

> Is 0.02WPM efficiant?

I don't know about "efficiant" but it isn't efficient.

I think it was obvious that when you introduced your "banana boat swing" to evade machine copy that I understood the difference.

Why would today be any different than then?

In article <b4ejii$2fbs$1@heap.juniper.net>, dennis@wawa.juniper.net (Dennis Ferguson) writes:

(exceedingly readable and balanced treatment of S25.5 and how it is a regulation, not a recommendation, snipped for brevity.)

>> Japan has waived Recommendation S25.5 for a certain class of
>> their amateur license which does have HF privileges.

>I have no idea how Japan justified that, but I would be exceedingly
>surprised if the US decided to do anything similar.

Dennis,

Here's how:

Japan issues ham licenses with HF privileges but with no code test. These are "4th class" licenses, and Japan uses the following argument to justify not having a code test for them:

1) The purpose of the ITU treaty is to avoid harmful interference and to promote orderly use of the radio spectrum.

2) In regards to Japanese amateur radio, two kinds of harmful interference need to be dealt with: interference to non-amateur radio services of all countries, and interference to non-Japanese radio amateurs.

3) 4th class Japanese hams' HF privileges are only on frequencies that are worldwide exclusive amateur, so interference to nonamateur sevices is prevented.

4) 4th class Japanese hams are only allowed to use very low power on HF (10 watts PEP, as I recall), and Japan is an island nation, so harmful interference to amateurs of other countries is avoided.

Thus, Japan says it is not in violation of the treaty, because its measures re 4th class licenses meet the goals of the treaty. You may not agree with Japan's reasoning, but to my knowledge no other country has challenged Japan on it in at least the past 35 years.

Note that the other three classes of Japanese amateur radio license DO require a code test.

>While there are people working to do this, there is no way to be certain if
>or when it will happen. Even though it may be considered at this summers
>conference, there's no guarantee that it will be voted on and there's no
>guarantee what direction such a vote would take.

Agreed, Dee, but if/when the question does come up, I doubt very much that there will be adequate support among the various nations to keep the Morse code test requirement in place. Just my opinion, based on a lot of things I've read.

>In addition, even if the
>ITU drops the requirement, each country will still have the freedom to keep
>it if they so use.

Agreed. And this is one of the arguments that will most probably be used against keeping the ITU requirement! Boils down to 'if the government of Country X wants to keep the Morse code test(s), nothing in the ITU treaty will stop them. However, Countries Y and Z won't have to do so.'

>Here in the US, it would take many months. First of
>all the FCC would put out a Notice of Proposed Rule Making. Then there
>would be time allowed for comments. And finally the FCC might or might not
>change it. This entire process would take quite a long time.
>
Maybe not.

FCC asked for commentary on the code test requirements as part of the 2000 restructuring NPRM (98-143). Well over 2000 comments were received, the majority of them supporting continued code testing at either two speeds or three speeds.

FCC, however, reduced the code test requirement to the single 5 wpm code test (Element 1). FCC specifically said it found only one reason to keep any code tests at all. That reason was the ITU treaty requirement.

FCC said code testing served 'no regulatory purpose' other than meeting the treaty requirement for HF/MF ham licenses.

FCC also denied all petitions for reconsideration of its decision.

Seems pretty obvious that without the treaty requirement, FCC could just eliminate Element 1 and be done with it. FCC could say that the issue had been adequately argued in 1998, 1999 and 2000 and that they were simply acting on their previous conclusion.

As you say, Dee, no guarantees, but it looks pretty promising.

However, before the FCC does remove the code test, it's pretty obvious that S25.5 would have to go away (mid-summer at the earliest?) AND the Senate would have to ratify the revised ITU treaty (fall? winter?). Even if FCC doesn't do the full NPRM thing, it will be late this year at the earliest before we see changes.

>In the time that it would take for this change to happen, IF it happens, a
>person could learn the code and be on the air for months. It is pointless
>to wait. Especially since the sunspot cycle is on the declining side of the
>cycle. The average person can learn the 5wpm in approximately 30 hours of

>per day every day and you've got it in only two months.

I agree 100%. There's lots of great freeware out there (G4FON's was mentioned here recently, for example) to make learning as easy as possible.

And in the process, a ham will have learned a very useful basic radio communication skill.

>Engineers won't know them without studying them.

Having an EE degree helps alot for the written test. Even for the rules and regulations section. You're right - these sections usually do not get covered in an EE curriculum. One can benefit from these aspects. Thats one thing I like about the written tests. The material for the tests is very good - IF one learns the material. It gives good coverage in the various aspects of amateur radio.

Believe it or not, I really appreciate the safety section, rules section, etc. True, I focus on the circuit theory section, but I appreciate the rules and regulations section. I may not want to master those areas, but I appreciate having some knowledge of these areas.

By the way, who is "me".

I have addressed that question in this thread. I believe EEs would feel out of place in Ham radio clubs today, and therefore not want to join.

I believe that engineers would benefit the hobby. Lets not drive away people, the addition of, who can be a benefit to the hobby's publicity.

The way to do this is to start or join "experimenter" clubs. Also, having more awards such as "Worked All Bands" as opposed to "Worked All States". This would encourage acheivements in these areas. Having topics such as "return loss" at conventions, instead of "how to use soup cans in building antennas" would help also.

So what's your point?

Do you have actual data to back up your claims or not?
>
> Ever since the restructuring period, the AH0A stat pages have
> lumped the two Technician totals into one pseudo-class.

So what?

I've posted the US license totals right here in this thread and kept Tech Pluses separate from Techs. 'Taint hard at all.

> That
> was clever for Speroni, an avowed PCTA...

Why?

> especially when the
> no-code-test Technicians can't be readily extracted to show
> the actual growth of non-morse hobbyists in the USA.

So now you finally admit that some Technicians are code tested and some are not.

> The
> rationales for them "being essentially the same" abound. :-)

From whom?

> One CAN get somewhat-old data from the Speroni stat site
> for a relatively short period before restructuring.

I don't use that data for license totals.

(N2EY)

> has
> never accepted such arguments

What arguments?

All I recall is you claiming over and over that all Techs were non-code-tested and had no HF privileges - with or without CSCEs.

Perhaps you could refresh my memory?

> since he too is an avowed
> PCTA and insists on the morse code test not being any sort of
> valid reason. :-)

Ah, the old ad hominem attack.
>
>>Such data could either support or work against his claims.
>
> Tsk, tsk, tsk. In previous numbers games in here,

(N2EY)

> sources and presentations from those sources which are
> biased towards his own viewpoints (that of an avowed PCTA).

Really? What sources would those be? Callbooks? Do you have other sources that show different numbers?

>
> ALL of those exchanges are in Google. :-)

So show us some where you prove your points.
>
> The FCC makes the entire US amateur radio license database
> available to the public, updated each week.

And I post the license class totals here twice a month.

> That is the source
> of "Callbook data" and "CD-ROM data" except that downloaders
> often do further sorting for their own purposes. Such sorting and
> tabulation is NOT government approved, just based on
> government data.

So what's your point? The discussion is about historic data.

(N2EY)

> is free to download the FCC data-
> base and sort his own directly.

So are you. You've got the time, and you're the one making the claims about
growth.
>
>>Without
>>such data, those claims are just wild speculation presented as facts.
>
> Tsk, tsk, tsk! "Wild speculation!" :-)

Yup. About all you do here, Len, besides sling insults ;-)
>
> PCTAs in here seem to be imbued with morsemen's wild hair
> on even the least negative attitude towards morse code's
> macho magnificence.

Where?

> [see Mr.N2EY, Dickiebird, the colonel,

> for anyone to peruse, reference, or check...and remains un-
> changed in content. Anyone.

Sounds like you really don't have any data, huh Len?
>
> Deliberate biasing of true factual data is bogus, the "wild
> speculation" of

(N2EY)'s

> charge.

Then why do you do it so often, Len? ;-)

> An example is the bundling
> together of the Speroni stats for Technician and Technician-Plus
> so as to mask those that were code tested versus those that
> were not code tested for their licenses.

Guess what, Len: Some Technicians are code tested and some aren't. Both before and after restructuring.

btw, I'm not AH0A.

(N2EY)

> should busy himself with downloading the weekly FCC
> free databases and sorting them out himself..

Why? You are the one making the claims, you should be doing the data processing.

> instead of using
> others' databases?

Why duplicate work already done?

> Or prepare another Sermon on the Antenna
> Mount evangelizing the Right Attitude on the worship and
> reverence of morsemanship.

Sounds like you have no data to share.

Don't they know that the Technician class of amateur radio license has not had
a code test for more than 12 years?

>These people
>would be an asset to the hobby,

If they cannot spare the time to learn enough to pass the 5 wpm code test, when
will they have the time to be "an asset to the hobby"?

> yet the code is a
>hinderance.

Do you mean the code TEST or the code itself?

>(what Engineer who puts in 9+ hour
>workdays and has a family has the time to learn code?)

Plenty that I know.

What about people from other walks of life? Do you think 'engineers' should get
some sort of free ride?

>The only reason I did is I was single whe I got my
>ticket back in '76. You would thisnk ARRL would
>put code to bed once and for all.

Code or code test?

Besides, it's the FCC who make the rules, not ARRL. And FCC won;t change the
rules until the ITU treaty changes.

>Finally, to anyone

Who is vshah101? This is me.

The addition of awards would only add interest to a limited group of individuals in the hobby.

Internet is doing a better job at attracting interest. One could only imagine how far the Internet would have gotten if it had a 5 WPM code requirement.

Sure. Hook it up to the web and let the gamers go at it. Some might
even pay good money to zap the bad guys. But where do you get blast
proof UHF antennas and cameras?

> But Green takes it a lot futher. He suggests that the United States adopt a

No, but I wonder if PSK31 might be adapted. Rather than 31 baud, slow it down to 3.1 baud and adapt other tones to bring the bandwidth down. Using DSP techniques, one might get down to a 5 Hz bandwidth and still enjoy five words per minute transmission. On off keying is not as rugged as frequency shift keying. Sure, they made contact (that is great), but using on/off keying, I doubt you'd get anything useful if it is buried that deep in noise :)

73 from Rochester, NY
Jim
ps - I used to love CW and hope to get back on HF and enjoy it again. It is not exactly state-of-the-art and let's not start the CW/no code thread again :)

FYI, from the Amateur radio Newsline #1334, March 7, 2003

RADIO RULES: WRC-03 GETS US POSITION

The U. S. Department of State has forwarded several agenda items to Geneva
as
being this nations opening position at the 2003 World Radiocommunictions
Conference. The most important of these relate to International Radio
Regulation s-25 and its sub-parts. Included in the initial United States
position is rewording S 25 subpart 1 to give member nations more authority
to
determine the points of communication of the amateur stations it has
licensed.
The suggested modifuication reads that administrators shall verify the
technical and operational qualifications of any person wishing to operate an
Amateur station.

The United States is also proposing to eliminate regulation 25.5. This is
the
rule that mandates Morse Code peoficiency examinations for all candidates
for
an Amateur license with high frequency operating priveleges. The United
States
says that its time to remove the Morse testing requirement and leave the
decision as whether or not to test for code up to individual I-T-U mermber
nations. (W5YI)

Jim,

Folks would be surprised how quickly one can learn the code. When Vietnam was hot, the Navy needed people as hospital corpsmen and radiomen. The entire company ahead of me in RM A school was shipped to 'Nam. Fail and sail. Of my class, only two of us could copy Morse code when we started. There were a few dozen folks in that class - and every one of 'em went from zero to 16 words per minute in a fairly limited number of weeks (in addition to having to memorize the baudot code for teletype along with everything else). A lot of people whine about ham radio being a 'cult', then turn on their transceivers and start yelling 'audiooooooo' and '10-4, good buddy'. Heck, what is this 'eagle' stuff with golf? Must be a cult, huh? What is a pre-emptive bid in bridge? All they're trying to do is prevent the opposition from bidding, so why not call it something like a 'shut-out' bid? Gee, must be a cult. All these rules and regulations! Heck, I drive the speed limit or less, why should someone tell me I must drive on the right side of the road when I'm left-handed? Must be discrimination, right? Well, I guess I got suckered into this old thread once again :)

Sounds like Loyd and Hillary are members of that group of persons who shall
nameness who live in
ratty trailer parks, and drive "Shivver-lo-lay" trucks with big whips on the
back.

My, my, aren't we jealous of all those frequencies, bands the FCC readily
allocates, whenever
possible, to all those worthless humans.

As Charlie Brown would say, "good grief!". Get a grip Roll, I am
not defending her choice of a call sign by any means, it is in
poor taste, but if someone is so weak minded as to be put off of
ham radio because of it, then they don't need to be in ham radio.

Why not at all, Brian. Sounds like you didn't understand much of what has been written about all of this previously. You often have that trouble. Previously I'd written about operators whose maximum receiving speed was five word per minute. Do you think the ops described in the story about a DX contact on 136 KHz were using their top morse receiving speed?

Define "normal."

"Education" for yourself is a personal thing and does not drive
this newsgroup. Insults hurled by outraged, wounded egos
drive the newsgroup. :-)

Extremely compressed "education" -

Time is the inverse of frequency. Bandwidth refers to the total
amount of spectrum space necessary for reception and
minimally adequate reproduction of orginal transmitted
information. Noise is the random noise from all sources in the
universe that does not carry information desired. Noise is
expressed as a power in Watts and generally (but not always)
assumed to have an equal average power at all frequencies
below 100 GHz and above absolute zero (-273 degrees C). In
most receivers the major source of noise is the input stage
beginning with the antenna itself, the antenna coupling method
and all components therein, the first active amplification stage.

In a 1947 seminal paper on communication circuit efficiency,
Claude E. Shannon showed the relationship between
information rate, bandwidth, noise, and error probability of
communication of the information. Those relationships were
adopted worldwide by industry, academicians, theorists, and
engineers. It is familiarly known as "Shannon's Law." [first
printed in the monthly Bell Systems Technical Journal, copies
were available from the University of Illinois on-line library of
historical documents...I have one in PDF]

Shannon's Law works on probabilities of correct information
transferrence. The "better" a communication circuit, the lesser
the number of errors. There is no such thing as "perfect copy"
but rather an extremely low probability of errors from any
source.

Noise power in a communications circuit is proportional to the square-root of the bandwidth necessary to preserve the original transmitted information. Since that noise is assumed completely random, that proportionality has been shown to be correct. While not relating directly to Shannon's Law as applied, a completely random noise source power will always add to the noise power from another completely random noise source in a linear mixing device.

Errors in a communication circuit are related to the signal to noise powers ratio. As that ratio goes lower, the error probability due to noise increases. Conversely, as the ratio goes higher, the error probability decreases. That ratio becomes a figure of merit for a communications circuit, familiarly known as the "signal to noise ratio" (sometimes "SNR" or "S:N") generally and "bit error rate" or BER to all those in any form of digital communications.

Noise power can be reduced by narrowing the communications bandwidth (square-root numerical as stated). But, bandwidth is limited by the rate of the information to be communicated. In simple carrier modulation applications the necessary bandwidth is approximately the inverse of the information rate expressed in units of time. [the now-common computer modem uses both amplitude and phase modulation plus bit combinations to increase the overall information communications rate without violation of bandwidth necessary for a single modulation of just AM or PM]

Since both noise and a desired signal are powers, statistical mathematics laws can be used to identify periods of time having just noise or the noise-plus-signal. Given enough time to do the averaging and other determinations of correctness, it is possible to detect a signal-plus-noise power that is only a small fraction of a decibel above just the noise power. The statistical averaging is generally done with some form of computer assistance for convenience although analogue methods could be used. Radio astronomers have been working regularly and successfully for over three decades on separating stellar radio objects where the signal source power was at least 20 db below natural noise power. The ability of such seemingly minute discrimination of noise versus signal-plus-noise can only be done for relatively long periods of time (relative to whatever minimum bandwidth is required).

The use of statistical mathematical laws allows a communications circuit to redefine its bandwidth, to make it an inverse of the time of averaging-comparison of signal-plus-noise to noise. Increasing time is equivalent to a decrease of bandwidth. As bandwidth is reduced, so is the total noise power. As noise power is reduced, the probability of error is also reduced. A communications information rate of 100 seconds per unit (0.01 Hertz) will have an effective signal to noise ratio of 10 db in power versus a rate of 1 second per unit of information (1.0 Hz). Effective bandwidth

reduction is 100:1 but the square-root relationship makes it a 10:1 change for the same probability of error. The downside is that information transfer rate is still at a 100:1 ratio.

Digital Signal Processing or DSP uses statistical mathematics and several other mathematical relationships plus very fast digital computation to discriminate signal-plus-noise to noise and to extract repetitive frequency components from just signal amplitudes over time. Such applications have been used for three decades in passive sonar, seismometry, civil engineering analyses of building structures and deep earth strata to some mundane consumer electronics gadgetry such a presenting a frequency spectrum display of music. Most audio range spectrum analyzers today are basically time-to-frequency DSP-driven instruments rather than conventional analogue electronic architecture instruments.

Could such a record be done using "faster" ("normal") or more conventional information modes? Possibly. To realize that requires an analysis of a proposed circuit path, available RF power, worst-case propagation loss at the radio frequency, narrowest receiving analogue bandwidth, and tolerable analogue signal to noise ratio plus several other more minor factors. Digital computation can then be applied to reduce the effective bandwidth and provide more discrimination between signal and noise. Utilization of error-correcting digital codes as part of the information transferred will reduce the error probability even further.

Class over. There will be an open-book test next Wednesday. Dismissed. :-)

Everyone has seen Heil use "mediocrity" in describing morse
rates below 5 WPM.

One-minute dot times would make that so "mediocre" as to edge
into the "ludicrous" category for proficiency, wouldn't it? :-)

Hello? International Morse Code is defined by (an old CCITT document revised by the ITU-T, revision not mentioned by FCC) a dash time three times longer than dot time. Inter-character spacing is another value and I don't recall a "word" defined there despite the commonly-accepted definition of a telegraphic "word" being five characters plus a space. Space between "words" is another, different dot-time value.

By comparison, an "8-level" teleprinter code has ten bits to each character, each of them the same length. Even the old, obsolete "Baudot" 5-level teleprinter code had only two separate bit times, the difference being in just one while the other six bit times were equal. Teleprinter printable characters, spaces, carriage returns, non-printing characters all take the same amount of time. Very periodic.

Yes, I'd say that International Morse Code was aperiodic since there are four separate times to its coding. If you don't like the word "aperiodic," then suggest another one to differentiate one from the other.

>It is true that if maximum instantaneous

"Production services?"

My little Oregon Scientific "radio clock" sits on one book shelf
about two feet above this computer monitor and periodically
checks itself against WWVB a few times a day. WWVB does
indeed transmit at a slow rate...1-second AM bits with 10 db
"on-off" levels of "negative logic" and BCD per digit. With that
periodicity, no more than 3 different "on" versus "off" lengths
per bit, that little $39 clock works just fine in Los Angeles,
some distance from Fort Collins, CO. Not much inside it but
the heart of it is an ASIC using extensive DSP to really, really
improve the signal to noise ratio. Weighs maybe an ounce.
Maybe a couple dozen plus other makers listed at the NIST
website, all small and comparable, including at least one
radio wristwatch. [Oregon Scientific model RM806, older
model purchased at Fry's Electronics about 3 years ago]

>Loran C uses pulse
>modulation, but this is only advantageous if you have no bandwidth or

>measure of compression for plain texts.

By gosh and golly, a wonderful revelation of high speed morse.
I'll take that under advisement, too, while you are petitioning
all the other radio services to drop all those inefficient data
modes in favor of that champion morse!

>Note that FEC doesn't automatically
>buy you anything much, it requires a coding-gain-versus-information-rate

>tradeoff which you need a lot of system knowledge to judge.

Gosh yes, "not much." Except maybe less error in
transmission on noisy channels. Lots of "system smarts"
in the system? One or two ASICs, maybe a handful of
MSI/LSI chips for FEC. BFD.

>I understand
>that the hobbyists doing LF experimentation under Part 15 have tended to
>use either slow Morse or slow BPSK using PSK31 coding and FEC, and while

Well, "there we have it."

>Bad math, I think. PARIS is 50 dot periods, or 1 word every 50 minutes,
>so the word per minute rate is 1 per 0.833 hours, or 0.02 WPM. Still
>not too fast, though.

Not "bad math," just not remembering the EXACT dot period of
"PARIS" in some necessity (?) for picking fly shit out of black
pepper to prove the "superiority" of morse codes.

If you want EXACTNESS of word rate, define the inter-word
spacing in dot times and add that to the EXACT time of "PARIS"
in morse code.

"...not too fast" is perhaps one of the understatements of the
year in here! At dot times of ONE MINUTE, 50 dot times is
FIFTY MINUTES TO SEND ONE WORD!

Oh? Last I was in formal engineering classes, we didn't have
any eidetic prerequisites or required units in "photographic
memory" courses or training. :-) Such is not in any syllabus
familiar to me. Maybe things have changed...?

>Now
>there are exceptions but the guy who read the book one night and passed the
>test the next is NOT representative.

Good point. Back at the beginning of March, 1956, I borrowed
a loose-leaf notebook of all the FCC Rules and Regulations (old
system of distributing paper hard-copies and revisions) and
crammed for a week prior to test time in Chicago, 90 miles
away. Took all four parts of the First Class Radiotelephone
(Commercial) test, passed them all. I crammed from a borrowed
set of regs because I couldn't get a Q&A book that went to
First in my home town of 80 thousand population that year.
I was 23, a few weeks after release from active Army duty, then
only a high school graduate and US Army schools did not cover
civil radio standards and practices. US Army did not teach
morse code to all signal corps personnel 1950s. In fact, not a
single one of the 43 high-powered transmitters at ADA in Tokyo
used morse codings to link the Far East Command Hq with
the USA and rest of Pacific armed forces 1953 to 1956. They
still don't and ADA is still the callsign of Hq USARPAC.

Tsk, tsk, tsk. Well, we are getting to fly shit versus pepper level, aren't we? :-)

One, I'm NOT buying anything from ITU if I can get away from paying for a download...that won't make their documents any less or more. Second, I call them RECOMMENDATIONS because that's what ITU-R calls them. Third, there are no, repeat NO International Radio Police to enforce "regulations." Everything is on an honor system of each member nation's administration enforcing their OWN national regulations. Each member nation's administration codifies its own laws for its own citizens.

>which administrations enter into, and it would not even surprise me
>if the Radio Regulations were subject to congressional ratification
>in the US (though I don't know for sure).

The US Congress has NO power to alter any agreements of a
United Nations organization or any foreign country. Congress
cannot "ratify" those, despite the wishes of certain members of
Congress. Any agency CAN INCLUDE mention of an inter-
national THING (word used to be all encompassing of pepper,
salt, whatever grains, any size) as a definition. That is NOT any
"ratification," just a reference.

>> In the USA, the "send by hand" portion of S25.5 is an optional
>> waive for all examinations. Administration members of ITU-R
>> are not obliged to precisely obey all recommendations.
>

>sufficient to meet the (unspecified) requirement for proof in S25.5 seems
>not inconsistent with the specification of 5 wpm as sufficient testing

>speed for S25.5 purposes.

Tsk, tsk, tsk, back to the "fly" thing? :-)

I see that waiver as a WAIVER, some cleverness in wordsmithing,
but it is a WAIVER to me and many others. Obviously your
mileage varies, no doubt the odometer calibrated in a morse shop?

>> Japan has waived Recommendation S25.5 for a certain class of
>> their amateur license which does have HF privileges.
>
>I have no idea how Japan justified that, but I would be exceedingly
>surprised if the US decided to do anything similar.

No idea? I didn't see any different kinds of pepper there in
the three years I was stationed there. Times change, though.

>The US already has the reputation of being an international bad boy
>when it comes to both adopting ITU Recommendations (for example, US
>telecommunications companies ignore a ream of ITU Recommendations
>for transmission facilities in favor of sometimes-nearly-compatible,
>sometimes-incompatible ANSI standards; the Internet came to be by

>and by insisting that all sorts of exceptions and frequency misalignments
>end up being included in the Radio Regulations themselves (often
>inspired by military and other government requirements and preferences).

? Oh, my, the bad old USA having its flag on fire or something?

Hmmm...the Internet is a "bad thing" and the fault of the USA?
What, for being first and using FOREIGN parts to protocol and
procedure as part of it? Since 1991 it has spread rather far and
fast all over the world...must be the "devil's work" or something?

Yup, Evil Military-Industrial Complex of running-dog Capitalists
created wired telegraphy (since 1844) first in the USA...then the
terrible telephone monopoly of good wired comm of AT&T...while
the first SSB (from The Netherlands) was "ignored" when USA
radio broadcasting spread before WW2...while nasty USA was
the first for color TV using the totally useless "Never The Same
Color" inefficient compatible system was adopted by many
other countries cowed by might of evil USA dictatorship.

>As the major source of international (tele,radio)communications discord in
>defence of the interests of both US industry and military, however, the
>US does compensate by being religious about observing the letter of
>anything they've actually ended up agreeing to do, and that includes
>the provisions of the Radio Regulations.

Dennis, did you volunteer to be a "human shield" and were
rejected? Are you Yurp born?

As to "discord," let me remind you that the IARU has suggested
a nearly FULL REWRITE of ALL parts of S25, while ARRL (a

USA membership thing and amateur regulator wannabe) has
taken a neutral position on S25.5. Neutral, no opinion.

>> Administrations are free to impose morse code testing for all
>> amateur licensees if they so wish, or partial morse code
>> testing for privileges above 30 MHz. It is all up to each nation's
>> administrations.
>
>What the US administration isn't free to do, however, is to entirely
>eliminate all testing of Morse code skills for privileges below 30 MHz,
>since by agreeing to the Radio Regulations the US has agreed to observe
>this requirement in its own regulations.

Oh? They are "not free?!?" Will the International Radio Police
attack the USA if we don't conform to all those Radio
Regulations? I don't think so. There is no "IRP."

There is only the Honor Obligation in any treaty or agreement. On
ANY subject.

>Part 97 completely conforms to the regulations in Radio Regulations
>Article S25, as far as I can tell. This won't change unless S25
>changes.

Sorry, it does NOT "conform completely." We've been over that
in another set of messages. The FCC has not YET corrected
its morse code definition reference. There is NO, repeat NO
equivalent word rate for "receiving by ear" or "sending by hand"
in any of S25. The USA could simply say test element 1 be
done at an equivalent word rate of 1 WPM (as an example).
That would "conform" just fine since there is NO ITU-R rate
given.

You gotta be high. The Iraqi's are already surrendering, and the
bullets aren't even flying yet. Just call it Desert Storm Part Duex.

FWIW, more soldiers are killed in training accidents than going up
against Arab tyrants.

> IS THE THE BEST FREAKING THING YOU PEOPLE HAVE TO ARGUE ABOUT?

What would you have us argue about? World Peace? Matching WorldCom
stock in a 401K? Wait while I bite my knuckle and think of some other
tragedy.

>And you took the bait?

Brian:

It isn't a question of taking the "bait." Kim came in here with her self-selected Vanity call sign which has been widely construed to be potentially damaging to the image of all radio amateurs, and YL's in particular. She went so far as to attempt to get Riley Hollingsworth to endorse it based on her "right" to select it, but instead was told, in so many words, that she has a perfect "right" to make a fool of herself to the possible detriment of the entire ham community. Moreover, instead of correcting the situation, she has stubbornly proceeded to defend the indefensible. I, for one, see little point in engaging her in any further discussion of the subject -- she knows what she has to do, and only she can make the decision to do the right thing. If she chooses not to, that will reflect poorly on her -- with the potential consequences so eloquently enumerated by Mr. Hollingsworth. What may seem to be an innocently witty joke to her could easily cause potential hams to decide to take up a different hobby -- and I couldn't blame them.

Raymond:

I don't consider public slander and libel to be "petty nitpicking." Such
name-calling has serious implications, and I, for one, am not going to
tolerate being referred to as a violent criminal. Not here, not
anywhere. I have already received and accepted Brian's apology -- Kim's
is forthcoming, hopefully -- I haven't finished reading the new postings on
this thread yet. I will not interpret the "grow up" comment to have been
directed toward me, personally, but I'd advise you to immediately clarify
the fact that it wasn't.

In years past, we have indulged ourselves in making some rather harsh
statements toward each other in this newsgroup, but the comments
currently in question have gone a bit too far. I have always been quickly
forthcoming in my apologies whenever I've made remarks which could

be construed to be personally offensive, and I expect no less from others in this newsgroup.

I realised that's what you meant to say. I still think that an EE who had actually worked in RF could just have read part 97 the night before. Now, if we were talking about someone whose professional background was, say, computers or power generating, then maybe you're right.

US amateur radio is NOT the USN or any other branch of the
military. Really.

The Southeast Asia Live Fire Exercise was 1964 to 1973, over
thirty years ago. Lots of things have changed in the last 30
years. Really.

Have you inquired whether or not any branch of the US armed
forces uses morse code for regular or tactical communications?
Outside of passive ELINT operations, part of the M.I., none is
used today. Really.

But, to reiterate, US amateur radio is NOT a branch of the US
armed forces. Really.

>Well, I guess I got suckered into this old thread once again :)

Yes, I guess you did. Really. :-)

Sorry to break the news to you, but engineers don't stop learning the minute they graduate. :-)

True, rules and regs are seldom a topic in any engineering class, but regulations and standards and such have the annoying habit of changing! In order to keep up, engineers have to study those at work or on their own time. Not in a formal school classroom.

There a different kind of "test" on "knowing regulations" pertaining to work. If required to know them, engineers get paid. If they are required to know them but don't, chances are good they won't get paid. Sound reasonable? :-) No pretty certificates if what is needed to know is known, no callsigns to write after a signature, just the regular paycheck being regular.

Ever hear of "MIL-STD?" :-)

Sounds like you may be right, or any other number of possible problems as well. From my understanding the equipment used is at least 25 or more years old. Possibly time for an upgrade??

Ryan

Yeah, still a little fuzzy about the legality of this still now, but at the time, I had to make a judgement call, and our safety was more of the concern (as well as the patient's) that I was considering.

What do YOU think, if you can? Does the term "depends on the application" mean anything at all to you?

Who said it would? I'm rather sure you never heard a banana boat swing. If you ever
listened much
to the CW bands you'd have. It's common in some parts. I didn't introduce it. But anyone
could
should he find some need to confuse a computer. Why should you have a problem with that?
Why should I even ask? You're the epitome of confusion..

I haven't read a full explanation but I believe it to be a very subtle change in the
noise floor with keying that can only be reliably detected over time by a computer
program. I know that in the past I have copied manual CW a few times that was so weak that a change in the noise was all that you could hear as the characters
were being sent. Taken even further into the noise a computer program as they used
would be needed to detect and decode it.

It's always argueable whether or not such a capability is "useful". Of course the cod-
haters argue that Morse code itself is useless, so there you have it.

Dick

If you're so lame you have no way other than some worthless computer program with which to copy code you'll just have to live with it, won't you? No action is needed on the part of anyone sending. Unless
you plan on getting together with the .02WPM boys you're a lost cause anyway.

Google up that post and show where I said that. Youre still a friggin liar, and if you know
anything you know
it. I'm not optimistic.
What I *did* say was that I was away from home visiting relatives where it would be
difficult to install coax
through into a brick home, so since I wasn't to be there long I left my rig at home. Your
twisted mind made all
sorts of unreal moves as usual, and you come up with this.

Time to dump your lame ass into the
crapper again, this time for good. Goodbye, idiot.

Dick, you introduced the term "banana boat swing" to the newsgroup in
a desperate and pathetic attempt to thwart machine copy by unworthy
No-Code Techs.

That is all.

This is a ham radio newsgroup, Raymond. While political discussions about non-ham issues do occasionally occur here, this is not really the place for them.

Furthermore, with the recent dramatic changes in this government (the creation of the Homeland Security Department, for example, with its not yet clearly defined authority and limitations), many opposed to a war with Iraq feel threatened talking about it. That leaves nobody for those supporting a war to argue with - a situation not exactly conducive to discussion.

Perhaps you'll have more success finding discussion about those topics in the political discussion newsgroups.

As long as he/she is operating under the rules governing supplemental public safety communications, nothing wrong with it. The "or not" following emergency in the sentence above is questionable. More on this below.

> There would also be nothing wrong with anyone
> (firefighter or not) using that same equipment
> in an emergency that met the criteria you
> describe above, correct?

As long as it meets the emergency criteria described by the FCC (its not my description), again nothing wrong with it.

> (snip) Well, extreme, and even "normal" emergency
> communication. I mean, to what extent *do* we
> define an emergency? (snip)

Since the FCC has already done so, we don't have to define it. It is communications involving the immediate safety of human life or protection of property where normal communication facilities are disrupted or when normal communication systems are not available. Lets stick to that definition in this discussion.

Clearly that definition doesn't include communications where normal communication systems (the fire department's radios) are available, nor does give leeway for fire personnel to go frequency hunting because elected officials fail to buy enough radios.

However, the definition does cover, in both situations described in the paragraph above, isolated incidents involving the "immediate" safety of human life or protection of property.

Getting back to the supplemental public safety communications mentioned above, the definition also does not give leeway for fire departments, or fire department personnel, or ham operators operating for the fire department, to move the department's communications over to the ham radio frequencies. The rules governing supplemental public safety communications involves unusual situations (disasters disrupting normal communication facilities, etc), not usual or routine situations.

> (snip) Fundamentally, for the sake of debate, if an
> emergency organization is dispatching personnel and
> equipment to an emergency scene, or is at that scene

> is true that there is not a predominant use of ham
> radio by our fire and rescue organizations -- I
> still think that it could be argued in their favor
> if they did use radios on ham radio frequencies. (snip)

That is where we would disagree. Unless it was an unusual situation (an immediate emergency with a disruption of the normal communication facilities, for example), I think it would be very inappropriate. It that were not the case, it would be equally appropriate for fire departments to use the frequencies of any other radio service (broadcast television, broadcast radio, military, etc). Clearly, such indiscriminate use would not be appropriate.

> PS--while serious, I *do* get this funny image of
> emergency persons carrying dozens of radios on
> their belts! :o

Most paid fire personnel don't, but check out some of the volunteer firemen when you get a chance. Some do go a "little" overboard in that regard. :)

It's not all that confusing, really...

You cannot use Amateur Radio in the ROUTINE pursuit of your employment. I realize that as a firefighter EVERY call is an "emergency", however that's not how the FCC would see it, I am sure.

Routine dispatching, dissemination of fireground orders, or intersquad communications would NOT be seen as appropriate for Amateur applications. Those are events that are routinely trained for.

Calling in a 9-1-1 response because you just rolled up on an MVA at which no other emergency responder is at would be a legit use.

Using Amateur Radio for "dispatching" or tasking of firefighting or EMS assets is only appropriate when all other resources for doing it are incapacitated.

As much as I support using Amateur Radio for subsequently supporting Fire, EMS, etc, the practicallity is that as a firefighter you shouldn't stray from Fire channels, especially on the fireground. If you wander off on some discreet channel to talk with other squad members you could miss that call to evacuate...I don't think that's a good time to be off on 146.52!~

73 and stay cool!

Bert
I studied code for 3 years before passing the test, but I didn't try that
hard
the first 2 1/2 years. The last 6 months is when I got serious and got with
it!
It still wasn't "easy", but it was something that "most" anyone can do!

I'm glad I went ahead and did it, instead of waiting for the ITU to drop it.

<SNIP>

Dwight
The problem on the "firefighter or not" question is the "not"s. In this
area we have enhanced 911 that rings in to the county dispatchers.
We all know that the 911 phone number is for "Emergencies" and
nothing else. The problem is the non-firefighter group that calls 911
asking questions that should not be ask on a 911 call, or calling
911 to report a dog loose in the neighborhood and that kind of thing.

There are people in the "real world" that aren't smart enough to
know the difference between a real emergency and a non-emergency.
Those are the ones that would screw up the whole deal on meeting
any requirements that is placed on the use of ham band or public
service bands during emergencies.

I can just see some dumb &^% getting on the local police, fire,
or ham repeater frequency and asking for directions because they
got lost and are in to big of a hurry to stop and ask somebody
they see along the road/street.

When did the hostile action hero last take an amateur radio examination? :-)

There are at least two separate "test" simulators on-line, both of which use the very same question pool data as any VE session. It is very, very easy to gauge the "easiness" or "hardness" of all the written test elements...by anyone.

>>Are you saying, one 8

The morse code test is considered a waste of time by many. FCC is on record as far back as 1990 on its opinion that a morse code test is not worthwhile to its evaluation of license grants.

Two four-year-olds "passed" a Novice and Technician class respectively in 1998...under the old (pre-restructuring) amateur regulations. Shall everyone "upgrade" to four-year-old intellectual radio capacity?

>>At least 75% of

Tsk, tsk, tsk, the magificent marine (ex) of 18 1/2 years thinks the word "shit" is profanity?!?! :-)

Oh, my, and the magnificent marine (ex) has signed off as "putz" so many times! Oy gevalt!

>>One, I'm NOT buying anything from ITU...(SNIP)
>
> That's alright, Lennie, we don't "buy" anything from you, either.

Tsk, tsk, tsk...editing and snipping pieces out of context.

I've purchased four downloads from the ITU. One of them was the referenced document (from CCITT) on morse code definitions given in Part 97, the only download from ITU about amateur radio. There was a go-around in here some while back on that morse definition document. Must have slipped your mind. [not difficult, it seems]

> Again, caught with his zipper down (not that we'll actually SEE
>anything...) Lennie refers to FACTS vs his FICTION as "pepper grains" as
>opposed to "fly (excrement)".

Tsk, tsk, tsk...a colloquial phrase (that means in common use among the people) was NOT the subject, was it?

The subject was "Regulation" versus "Recommendation" in ITU-R.

Dennis Ferguson argues for exactness in naming, implying the international law thing. I argue for "Recommendation" from the ITU-R Study Groups as extending to all "regulations" on the basis of a common-agreement honor thing by all member parties.

Steam Robespierre can only wave his scatological sabre wildly trying to get into the act. Bad acting. [play closed in Chatanooga...]

> THIS is cute...Mr. "I Am A Radio Professional" trying to bail himself out

Tsk, tsk, tsk...send out the International Literary Police! :-)

> You've already been proven wrong and Phil Kane did a nice job of doing
it.
> Need another spanking, Lennie, or still stinging from the first?

There's been NO "proven wrong" since there is no International
Radio Police to enforce the ITU-R "regulations." US citizens on
US territory are subject to US law, not some "international law."

It's the difference between "de facto" and "de jure."

Codified US law may reference "international laws" as part of
US law, but, still US citizens are subject to US law on US
territory. That's "de jure." Fancy word, Latin origin, look it up
and learn something.

Too many folks interpret "international laws" as applying directly
to themselves/whatever, the same as US law on US territory.
Actually, what has happened is that US law on US territory has
referenced the international thing AS IF the international laws
applied. That's "de facto." US laws apply on US territory, none
other, regardless of the spin applied by certain legal wordsmiths.

If you don't understand the difference between de jure and de
facto as applying to the discussion, then all you are doing is
just another useless flame war Hostile Action. Tsk, tsk,.tsk.

> Hmmmmmm.....First you try to embellish your military "career" by
>misrepresenting your relationship with Army KIA's from the "active" phase of
>the Korean War.

Firstly, personal military experience was NOT in the discussion
thread.

Secondly, what began as the 71st Signal Service Battalion, US
Army, back in 1946 as part of the US Army of Occupation in
Japan remains today as the 78th Signal Service Battalion at
Camp Zama, Japan, under the 516th Signal Brigade at Fort
Shafter, Hawaii, as part of US Army Pacific. I was assigned to
the 71st Sig Svc Bn on Februrary, 1953. 19 members of the 71st
died on 1 July 1950, ordered there by Far East Command Hq to
support Korean communications at the outbreak of the Korean War.
That is NOT "embellishment," simply known historical fact in the
history of USARPAC.

Third, try to stay focussed on the thread SUBJECT instead of
nursing old, aggravated ego wounds from long ago messaging.

> NOW you are making fun of the United States as a whole and seemingly
>supporting the idea of flag burning.

Poor baby...terrible reading comprehension...tsk, tsk, tsk.

> Scumbag.
>
> What would YOU know of "honor"...?!?!

That pretty much sums up the interest of this extraordinary amateur extra in this newsgroup...fight, fight, fight in a continuous set of hostile actions in messages. :-)

Now, do you have any data to share on ARS license numbers?

Remember that you must be Serious, just like Reverend Jim.

574. Re: ARS License Numbers

Poor baby. Everything contrary is "wild speculation" but anything
in agreement with your melifluous magnificent mumbling is hard,
factual evidence? :-)

Tsk, tsk, tsk. This newsgroup has gone round and round on
the numbers game before and you must have your way and
only your way on interpretation of the numbers. Sounds more
like a con game for the Right Attitude...with a lot of self-
righteousness on Your Way is the Only Way. :-)

Everyone is still waiting for the Sermon on the Antenna Mount.
We missed you this Sunday. [we'll aim better next time...]

Try to be Serious now. Amateur radio is all about Work, Study,
Devotion, Upgrading, and Working DX on HF with CW. It isn't
a hobby...it is a Service. Try to instill that in the masses, the
ignorant inferior beings who have not seen the Greater Glory of

Morse Magnificence! :-)

>
No, Mr. Ferguson is just correcting your error. Live with it. ;-) ;-)

>>> Japan has waived Recommendation S25.5 for a certain class of
>>> their amateur license which does have HF privileges.

No, they did not.
>>
>>I have no idea how Japan justified that, but I would be exceedingly
>>surprised if the US decided to do anything similar.

Here's how:

Japan issues ham licenses with HF privileges but with no code test. These are "4th class" licenses, and Japan uses the following argument to justify not having a code test for them:

1) The purpose of the ITU treaty is to avoid harmful interference and to promote orderly use of the radio spectrum.

2) In regards to Japanese amateur radio, two kinds of harmful interference need to be dealt with: interference to non-amateur radio services of all countries, and interference to non-Japanese radio amateurs.

3) 4th class Japanese hams' HF privileges are only on frequencies that are worldwide exclusive amateur, so interference to nonamateur sevices is prevented.

4) 4th class Japanese hams are only allowed to use very low power on HF (10 watts PEP, as I recall), and Japan is an island nation, so harmful interference to amateurs of other countries is avoided.

Thus, Japan says it is not in violation of the treaty, because its measures re 4th class licenses meet the goals of the treaty. You may or may not agree with Japan's reasoning, but to my knowledge no other country has challenged Japan on it in at least the past 35 years.
>
> No idea? I didn't see any different kinds of pepper there in
> the three years I was stationed there. Times change, though.

Where there no-code-test Japanese hams back then? ;-)

>>The US already has the reputation of being an international bad boy

What do you suggest?

> The USA could simply say test element 1 be
> done at an equivalent word rate of 1 WPM (as an example).

WHY? Would that make any difference to anyone?

> That would "conform" just fine since there is NO ITU-R rate
> given.

So? What difference would it make? Some might even say that 1 wpm is actually harder to read than 5 wpm.

577. XM-Radio compatible with 2M/450?

My new tow vehicle ('03 Silverado 2500HD LT Duramax/Allison) came equipped with Bose XM Satellite radio. In the literature it makes some vague warning about damage from radio transmitters. I suspect this might just be some lawyers CYA boilerplate, but wonder if any of the gathered multitude have run XM radio and UHF/VHF ham radio in their vehicles?

580. Re: The end of K1MAN, AARA and IARN

Newsgroup: rec.radio.amateur.policy
Date: 2003-03-10 21:12:29 UTC
From: 5-day deodorant pads <goofyham3s@arrl.net>
Message-ID: <3e6cffcd@snipnews.snip.net>
Source record: 62667
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.scanner,rec.radio.shortwave

K1MAN is COMPLETELY out of his tree.

He can get away with this kind of goofy ham radio crap
since he allegeded inherited a couple $$$ Millions
from his relatives and is an alleged shareholder in
Baxter Medical Instruments Corp - or so the rumors go.

He is, by all sense of the word, the classic archtype eccentric millionaire
with convoluted thought patterns having no basis whatsoever
in reality. He is Ham Radio's answer to Michael Jackson - complete
with his very own "Never-NeverLand" Compound, way up there in frozen
ice-bound-7-Months-out-of the-Year Belgrade Lakes Maine.

While we are on the topic of Maine, how would you like
to have some eye-opening fun...? Call up the toll-free
Maine State Dept of Tourism and ask em' for a free Maine
travel brochure package. When U get it you'll be amazed to see that
8 out of every 10 photos of the various Hotels and
Inns and Campgrounds features a photo of an in-ground
swimming pool, complete with cute (caucasian...grin) kids
in bathing suits running around, and mom & dad on the
lounge chairs poolside getting themselves a suntan...
Yeah right!! Perhaps for 8 weeks in the "Summer" before
Maine goes back into their normal "Little Ice Age" wx pattern!
I was up there once in June and it went down one
night to 38�F - Just what I needed in my bermuda shorts and
Harley Davidson of Indy cotton tee shirt. All kidding aside
we did have a great time, but Maine's Wx is just one step above
Nome AK !

Oh well, perhaps K1MAN should start a ham radio theme
parkjust like M.J. did too ?? Can you imagine for a
minute, ferris wheels with 6L6 vacuum tube shaped gondolas
and bumper-cars shaped like R-390A's! Then he can
run the place just like Michael Jackson does his.......nah!!
Better not give him any more kooky ideas....

:) :) :) :)

"The scientist. He will spend thirty years in building up
a mountain range of facts with the intent to prove a
certain theory; then he is so happy in his achievement
that as a rule he overlooks the main chief fact
of all--that his accumulation proves an entirely different thing..."

- Mark Twain

I would LOVE to hear a Debate at the next Dayton Hamvention
on the topic of "The Future of Amateur Radio" with Glan Baxter
(K1MAN) and Wayne Green (W2NSD) on one side...and Reily
Hollingsworth (K4ZDH) and Dave Sumner (K1ZZ) on the other.

Now tell me THAT would not sell out the Banquet Hall and gop
on for Hours with 30+ cameras on tripods recording the event for
posterity...or adleast they could put the 8mm VHS-C tape in
the glass case, right next to all those old dusty old vacuum tubes
at ARRL HQ.............

Kewl beans! The 5-wpm test is only an entry-level exam, not a "proof of proficiency." It's just a starting point from which one can choose many different paths. Glad to hear that you went ahead and just did it. I certainly didn't mean to imply that it's "easy" for everyone, but as you pointed out...very doable. Take it easy. :-)

Sure its do-able and easy. Heck you can memorize 5 wpm for dang sakes.
The bottom line is LAZY.

And don't forget...we owe them because they didn't ask to be born.

Good grief.

>Sure its do-able and easy. Heck you can memorize 5 wpm for dang sakes.
>The bottom line is LAZY.

After a certain number of words per minute encoding/decoding is automatic, a type of "motor-memory". Therefore it can be said that the 13wpm coders are lazier than the 5wpm coders since they are relying on motor-memory.

If a 13wpm coder "forgot" how to code at 5 wpm, this coder should relearn 5 wpm. Since these are two different skills, it seems a coder should learn BOTH 13wpm AND 5wpm.

Especially about a no-code novice test. No such thing. Novice is no longer available and they had to pass the same code test that the extras have to today ;) BTW, there are a number of truckers (I've talked to a few) that have their tickets. Glad to have 'em aboard! BTW, if you can locate one, the HTX-10 10 meter Rat Shack transceiver is on sale for $69.99. 25 watts ssb, 25 watts FM, and 7 watts am.

73 from Rochester, NY

No, you're an absolutely dense example, about as much so as one could imagine. THAT is all.

Yes, we know, you have said that before but you also said you operated in Somolia with permission.

Exactly where all the facts are is still up in the air.

>
>
> Is there anything else you'd like to add?

Yes, as a matter of fact. What I would have liked to have seen years ago would have been for
you to grow up and start acting like a man and an actual -dare I say real?-ham radio operator. Looks like it was not to
be.

> real emergency and a non-emergency. (snip)

I agree about 911, William (or Bill?). However, two relatively recent incidents cause me to give pause when pointing a finger too hard. Police and fire departments in some towns now seem to be trying to sharply reduce or even eliminate calls to the station. As a result, some are intentionally making it difficult to find a non-emergency phone number. For example, when I attempted to contact the fire department over a concern I felt was not an emergency, I wasted almost 30 minutes tying to find their number in the phone book (it was buried under some state agency that didn't appear to have anything to do with fires, much less this town). Further, a call to directory assistance actually resulted in a recommendation to call 911.

I'd like to say this situation is isolated to just this town, but the other incident occurred across the country in Washington state. In a town there, I tried to call the police over a non-emergency situation (I witnessed an incident I felt should be reported), but simply gave up after some time looking for their number.

However, I do agree that people do call 911 over some of the most mundane matters (and even some absurd matters). But I don't see how that can be completely eliminated without the possibility of causing hesitation in those who probably should call (a seemingly minor issue could potentially have serious consequences).

And, for some people, that companion cat in the tree is a true emergency. Many police and fire personnel today don't want to deal with the mundane matters of community residents. But that was not always the case - at one time, community relations (however minor) was a important matter for most departments. Besides, handing that companion cat back to the little old lady did wonders for the image of public safety personnel in the eyes of the

community (and didn't do too badly at making the cop or fireman feel good either).

Sadly, with police now patrolling in cars more and more isolated from the community, and fire personnel rushing from incident to incident, those times are probably gone forever. It just might take some time before everyone understands that (and accepts it).

Why would they automatically be an asset just because they're engineers?
Anyone who has such limited interest that they won't consider meeting the
requirements because they include one minor one they would rather not
fulfil might not be interested enough to be even involved. There are lots of
people even engineers who hold licenses but do nothing with them. Even
engineers.
That doesn't make them an asset, valuable or otherwise.
If you believe otherwise it shows your lack of familiarity with ham radio.

I can't say anything specific about satellite radio, but the warning itself appears to be on most newer vehicles (regardless of the devices installed). For example, my Explorer had the same warning, with a recommendation to have radio equipment professionally installed. Of course, in this town, I don't know of anyone I would consider a professional when it comes to installing communications equipment in a vehicle - including those who installed the local police and fire departments' communications equipment. As a result, I do it myself (and I haven't killed anything on any vehicle yet).

Interesting. You declare 5wpm as NOT proficient, yet you don't know
if 0.02wpm is proficient or not. Hmmm.

I think you're the one who waffles with the truth, and has an attitude
about the code.

73, Brian

You said you put a ssb radio in an old car. Produce the car with the
radio in it. Until you do we must assume you have lied. There is no
evidence whatsoever that you are now capable nor ever been capable of
transmitting a signal from and source other than your house current.

Dick, I've not gone around spitting bile in the faces of other hams on the web. Time for you to lose your hatred for the modern and grow up yourself.

DICK, I've never been a no-code anything. However, unlike you, I
don't look down on the no-code licensees. I see them as hams.

What BS.

At 13 and greater WPM, the code is "heard" just like a second language. I
don't "hear" the letters being sent...I "hear" the words.

>If a 13wpm coder "forgot" how to code at 5 wpm, this coder should relearn 5
>wpm. Since these are two different skills, it seems a coder should learn BOTH

Rephrase that to say the military does not use Morse Code ROUTINELY and
you'll be OK. Morse Code IS stil taught to some branches and used both
passively (intercept) and for some covert operations.

That sounds more like the fault of the phone company than the fire/police.
In our phone book all the numbers emergency and non are listed inside the
front cover and for all the communities that the directery covers.

>
> I'd like to say this situation is isolated to just this town, but the

With budget cuts and rising costs to run a dept it's no wonder that they refrain from running on non-emergencies.

>
> Sadly, with police now patrolling in cars more and more isolated from the

Dwight, small town America is still around, but it's on it's deathbed. We are
a small community (appx 2000) and the police and fire are all known by everyone on a first name basis. But just like Bob Dylan said, "the times they
are a changin'" it's a sad thing but something we can't stop, just remember!

In attemping to "prove" himself master of SOMETHING, anything,
AVeryFinePutz
has instead shown himself to be grossly ignorant of any practical
knowledge and experience in the field of HF radio communication and
practical communications
circuits in general. There is good reason why Shannon's theories are
presented to
prospective EE's *only* after a few years of college work.

Of course they are accurate but fail to reflect the realities of real
world
communications today, particularily ham radio, where 'optimal' is a word
concerning virtually no one except theoreticians and design engineers

intent on conserving the last bit of power, space, distance, time, efficiency. It has so little to do with everyday ham radio operation as practiced by typical ham radio operators ON THE AIR that his presentation on
this venue becomes little more than a sideshow. In plaianer words, the world has never
operated at or even near the "cutting edge". Technological advances always occur over time, and lots of it. Sure, there are some modes out there now using super efficient codings. So what? Nowhere near the horizon is a ham radio using only Shannon-optimized gear and practices. In AVeryFineSpeciman's jaded outlook that only offers him more reason to criticise things that exist while his presence on this newsgroup is no more that a body slam against hobbyists and a hobby that he has always resented and could never bring himself to attempt to join. Just the transition of analog broadcast TV to all-digital HD is causing more than enough shock in a world where dollar value must be given more and more consideration, again as has happened in the past.
Of course Loose Lennie can't be expected to know that, nor much of anything else about reality.

As ham radio continues to drop demands for technical knowledge right along with
proficiency in Morse code, the idea that hams should be as adept at manipulating
Shannon as if they were design engineers is as ludicrous as the idea that we should actually pay The Louse him any serious attention. I sure wish you guys would all start ignoring him again, as that's the only way we'll ever get rid of him. Someone said "The poor will always be with us". Same with Lennie the Louse if we don't begin to again give him exactly what he deserves. You figure out that that is.

That's not logical, Me. One might find some logic in requiring knowledge
and
skill in a variety of the components of driving that are not always
used, which mnay never be needed,but which one may find useful or that
are a often used
part. Morse code is a longtime much used part of ham radio even today.
Few hams operate satellite comms or are VE's but the rules mandate that
the tests cover those topics.
That is a valid comparison.

You're the only person on the planet wondering. Do you by any chance
feel isolated?

The truckers that use ham rigs around here have them clipped, and run
down just below and above the legal CB band, and some run 24-25 MHZ.

The rigs of choice for them were:

Yaesu Ft-757
Kenwood 440
Icom 735,

Then it was

Kenwood ts450's
Kenwood TS 50's, but they complained about the "splash"!

Now it seems like the Icom 706X is the rig of choice. I get to hear
these guys in the background due to how close to the interstate I am.

There you go with your usual garble of facts. It was a fairly new radio in a fairly new car.

> Produce the car with the
> radio in it.

Still have the old (now) radio in the junkbox, sure wish I had the car. 65 chev Malibu 2door HT

white, 283 turbo automatic. Slick. Made a great mobile installation for CW too, wasn't hard to arrange the SSB rig to work
CW. Dunno how you handle such things. Not at all, obviously.

> Until you do we must assume you have lied. There is no

Shows what you know. That's exactly how this lil' fracas got started.

> Time for you to lose your hatred for the modern and grow up
> yourself.

Wrong again, it's far past time for you go GET REAL and get a life, both within and without ham radio. You're an absolute
idiot if you can't do better than that. CW is so small a part of it that it doesn't even register except for you and Putz insisting on keeping it a part.

Goodbye.

Let's see. Would you want to learn how to ride a horse? Horseback riding was an early form of transportation. It is a tradition that was used for hundreds of years. Wouldn't you want to keep up the tradition? Just think, you can brag to your friends that you can ride a horse. In an emergency, you and the Lone Ranger can ride for help. Everybody in the newsgroup would be impressed.

What parts of the driving test would you want to delete?

Doesn't matter much to me if you are playing stupid or whether you are
actually stupid, Brian.

Someone whose maximum code speed is five words per minute is not
proficient at morse code.

Someone who uses a morse code speed of .02 wpm may or may not be
proficient at morse code. That would depend on the maximum speed at
which he is capable.

Hmm, indeed.

Dave K8MN

Because you don't know turn the dial. You might want to get with Jim
and Dave and get this group moderated, to at least exclude non-hams as
was discussed before.

Then you can exclude people with zero calls and stroke 8 suffixes.

Then you can exclude people with 5 calls and any suffix with a "T."

Then you guys can slap yourselves on your back for an eternity, where
never is heard a discouraging word, and the skies are not cloudy all
day.

>
> Bobby Joe

I beg to differ. For example, USAF Auxiliary (CAP) operates on 26 MHZ.
Military and govern-
ment stations on both 25, 26, and 27 MHZ. Twenty four Megahertz from
24.930 (approx) to
24.990 is a ham band so designated by world agreement. Ten meters is also a
ham band (28-29.7
MHZ)--again by international agreement. I have to say this, but it is true:
Most CBers haven't
a clue when it comes to reasons WHY things are set up the way they are.
Except for a minority
with a bit of training, most CBers/truckers buy a rig, set up the thing to
"swang" as if that helps
anything, put in a trashy, splattering "leenyar" and start jabbering
away--completely clueless and
oblivious to the WHY the thing nor how their actions affect others. And
the BIG REDDIO boys
don't care--just as they can feel adequate or fool themselves into thinking
they are a BIG man be-
cause they can splatter over the next truck 100 yards away.

Like it or not, the regulations are set up just for this reason. To allow
everyone to just yap any one
pleases would render the spectrum useless. And the climate for enforcement
has changed (read
the rainreport for March 7th). One gentleman, and quite a few others, have
found that so-called
"freebanding" doesn't pay. Those other users that you *think* aren't being
hurt by your being out-
side frequencies allowed for CB, are complaining loudly. The enforcement
honcho at FCC has
made hams and others aware that FCC HAS received additional funding, and Mr
Hollingsworth
IS using the money to go after the truckers who are using those "export"
radios as well as users.
According to Mr. H. as recently as this last Saturday. you can count hearing

about some major
truck chains getting hit with some BIG fines. There may be some other
surprise visits by agents
at weight scales. I can't make anyone believe this, but these are just the
facts. The legitimate
users of licensed frequencies are just not going to put up with interference
from bandits.
If you have time to search the archives in the rainreport, you can the
steady increase in citations
over the last year. One driver got fired (Cheetah Transportation). This
last reporting period,
one gentleman got warned for operating on 25 MHZ. He was a ham, too. Now
he may get his
license pulled because he *thought* that he wouldn't hurt anything; after
all, those frequencies are
"empty", right? As far as the truckers operating on 10 Meters, it is not a
good idea to do that
either. Many hams, angry at the intrusions, are listening closely to trucks
and turning them in.
Usually what happens, a trucker sees an odd ham antenna and gives the ham
"ol' holler, thar".
The ham, who *may* be listening, uses a min-tape recorder, writes down the
tag numbers,
company name, and tractor info, and sends it to Mr. Hollingsworth. With the
correct info (
for which the FCC has asked hams to incliude), they WILL send a warning
letter. If you
continue to operate out-of-band, then it can get VERY expensive! Like $10,
000, seizure
of equipment, or prison time (Just ask "Rabbit Ears" in Florida who refused
to stop. In the
case of a trucker who gets such a letter, you will wonder how you got caught
because the
ham will likely not respond since voice operation is not legal below 28.300
MHZ.

As to wanting *all* the spectrum, well, we have quite bit of it. But have
you ever wondered
WHY that is and why CB has so little? Think about it. And besides, hams DO
"own" the
spectrum; they I N V E N T E D it!!

Not at all. We don't own all the spectrum and recognize that fact.
Unfortunately, you seem to think YOU own all the spectrum. You *don't*.
There are many avenues which are legitimate. Truckers can enjoy CB, they
can enjoy low-band VHF, high-band VHF, UHF, and amateur. Except for CB and
MURS, all require a license.

73 from Rochester, NY
Jim
(and here comes another 'ding' from frontiernet for multiple postings.)

Really kind of a strange bunch of rules the FCC has. They issue ham
licenses with a term of 3652 or 3653 days, but the renewal window is
only 90 days. That's....ummmm.....2.4% of the license term. Once upon
a time they'd do a renewal with an upgrade or modification if you
asked, which would save us and them some paperwork, but no more. Only
a vanity application gets you a renewal outside the 90 day window.

Well, sure, otherwise nobody will listen to them.

I've always been curious about the echo radios. How much extra do they
pay so that they can sound like they're shouting into a toilet bowl?

634. Unattended Packet ok?

Ok...got another questions.

I am trying to understand the rules for unattended APRS. I have found conflicting info.

If I want to help our local Fire/Rescue squad and install an APRS unit in a vehicle, is that legal? I understand it is as long as they are not able to hook a computer to it and it is locked out from them doing anything.

I know the APRS software has a specific setting for FireTruck, etc so I assume those issues have been thought about??

Thoughts?

Veeeeery good! Now you have the idea...And since cancer awareness is now at the forefront of your conciousness (and we all know what a short trip THAT is...) remember that this includes lifestyle and dietary management.

So one thing must lead to the other. Will it GUARNTEE you will never get cancer...?!?! Of course not. But it certainly means your chances are lowered.

Now...see how EASY that was...?!?!

Not really, just the band of frequencies that are assigned to ham radio.

I'll make ya a deal.....stay off of 10 meters until you get your ham
license, and you can do whatever you want......Deal?

> What literary police, Your Scumminess? We are discussing radio
>regulations, a subject in which an alleged radio professional SHOULD be able
>to demonstrate SOME understanding in...Obviously you can't.

Poor baby...confused as to Word Titles Being More Important Than Word Content again?

"Regulations" to me are codified laws or orders which are enforced
by lawful parties.

"Recommendations" are just that...what is recommended as a
working standard for the benefit of all participants. The only
"enforcement" is on an honor system. No "police" will come and
take one away or issue fines for use of some method other than
what was recommended.

> You were wrong, Lennie...You were wrong before, you are wrong now. Don't
>need any "Radio Police" to prove or disprove it...Just reading your rants then
>refering to the actual regulations show you are wrong.

Prissy puritanical regulation-waiving confrontationalism doesn't
take away anything that I said, corpseman.

If the ITU wants to make final voted issues "regulations," they
can write it all they want. They are still just Recommendations,
working standards upheld on an honor system.

> (Having chastiswed me for what is or is not part of the thread, Lennie
>launches into a recital of his former unit's heraldry...as if we care...)

Poor baby...you got "chastiswed?" You married a chaste ?
Your charles got twisted?

"Heraldry?" Coats of arms? Pretty flags, ribbons, symbols to
make it easy for illiterate peasants to worship mighty knights?
Poor baby...all image you are, no substance.

I just repeated what I wrote before on the HISTORY of my US
Army Battalion and its evolution from 1946 to today. No
"embellishment" there but rather a condensation of 57 years
of specific history of a single unit.

> Do you? Any intentions on living up to your bravado on getting that
>Extra-lite out of the box, Your Lyingship, or just more continuous
>excuse-excuse-excuse...?!?!

You are hardly a role model for becoming an extra anything,
prissy puritanical yet profane corpseman.

> I see YOU have a problem with seriousness, Lennie.
>
> Sheesh...PUTZ!

Call a rabbi that, Sgt Putzman...see how "serious" you are.

Using a Jewish-ethnic middle-european pejorative doesn't
make it any less profane. "Putz" is synonymous with the
American pejorative "dickhead."

The word "putz" is also middle-European, a colloquialism
referring to "polish" (as in polishing silver, not to Poland).
The etymology leading to putz-as-a-pejorative refers to
someone constantly polishing their male organ as if to show

how mighty and macho they are...(their brains are in their penis, hence the anglo form "dickhead").

Once again Sgt Putzman shows a reflection of himself in trying to attempt intellectual discourse. He has to learn which side of the mirror to hold up... :-)

>We're at the 'Len Over 21 made an error and won't admit it' level.

Sorry, bubeleh, Leonard H. Anderson (screen name of LenOver21) made a statement about RECOMMENDATION versus Regulation before and still holds to that.

Hello? I keep saying RECOMMENDATION because that is all what the ITU-R "Radio Regulations" are...a common-agreement, honored set of standards. Not binding in law as we citizens of a country are bound...there is no enforcement arm of the ITU...just agreements.

>> One, I'm NOT buying anything from ITU if I can get away from paying
>> for a download...that won't make their documents any less or more.
>
>Irrelevant.

Your remark is irrelevant and confrontational.

>> Second, I call them RECOMMENDATIONS because that's what
>> ITU-R calls them.
>
>No, ITU-R calls them 'regulations'.

They are RECOMMENDATIONS until voted during a WRC. After that they are "Radio Regulations." Those "regulations" are still nothing more than RECOMMENDATIONS. There is no crime committed if a country goes against those "regulations" because those RECOMMENDATIONS (called "regulations") are not law of any country.

>> Third, there are no, repeat NO International Radio
>> Police to enforce "regulations."
>
>So?

>Is a regulation not a regulation if there are no 'police' around?

The ITU-R "regulations" are NOT law.

>(expletive deleted)

Tsk, tsk, tsk, another Priscilla Goodbody, prim, proper, and prissy pedantic victorian. Like an ex-marine corpseman in here.

Oh, excuse me, you wouldn't know about such things as never
having served your country...

>> Tsk, tsk, tsk. Japan got away with a "violation" of S25.5, didn't
>> it?
>
>No.

Poor baby...Reverend Jim thinks he is one of the Supremes.

There is NO "violation" of a non-law. If Japan could do what it did,
so can the United States or any other member nation of the ITU.

Perhaps the only reasons the USA hasn't done the same is the
political pandering by olde farte morsemen...and that amateur radio
is not a vital asset to the USA. It isn't worth the effort.

>Do you think the USA should adopt Japan's type of no-code-test HF amateur
>license?

Reverend Jim, I think you should quit snorting the cheap stuff
and not become such confrontational pedant with these
subject misdirections.

>Phil Kane has told us here that ITU-R is a treaty and is ratified by the
>Senate. IS Phil Kane mistaken about that?

Phil Kane is an attorney but he is NOT a Judge of the ITU Court
or even any Supreme Court.

Membership in the United Nations by administrative and legislative
processes signifies that the United States honors the UN bodies'
purposes, goals, and member obligations. Has the Congress of
the United States "ratifiied" anything specific about the Radio part
of the International Telecommunications Union? I don't think so.
Has Congress of the US specifically "ratified" obeyance of S25.5?
No.

Go kiss my yes.

>Who else?

You don't have a need to know. Go kiss my yes.

>>>> Japan has waived Recommendation S25.5 for a certain class of
>>>> their amateur license which does have HF privileges.
>
>No, they did not.

Yes they did. For a few decades at that. While S25.5 doesn't
say much, it is quite specific about testing for International
Morse Code with reception by ear and sending by hand for ANY
amateur radio license having below-30-MHz privileges.

The Japanese have an amateur radio license for below-30-MHz
privileges that does not require testing for morse code. You

cannot say they don't because they do. S25.5 is specific enough
in what it says.

Go kiss my yes.

>Thus, Japan says it is not in violation of the treaty, because its measures re
>4th class licenses meet the goals of the treaty. You may or may not agree with
>Japan's reasoning, but to my knowledge no other country has challenged Japan
on
>it in at least the past 35 years.

Miccolis is NOT on some Supreme Court of the ITU or the USA
despite trying to act like a member of same. Your black robes
are invisible. [the little barrister wig IS helpful...]

>> No idea? I didn't see any different kinds of pepper there in
>> the three years I was stationed there. Times change, though.
>
>Where there no-code-test Japanese hams back then? ;-)

Doesn't the renowned amateur radio Historian KNOW?!?

Who cares? You weren't alive yet at that time. I was busy
doing military communications for Far East Command Hq.
That's professional radio work. My battalion got two Presidential
Unit Citations for signal work while I was assigned to it.

>The correct way to dispose of an American flag is by burning.

Tsk, tsk, tsk, not a LAW about that. The only LAW passed
was a code of etiquette on display and handling of the USA
flag. I know that law cite. Do you? Are you a USA citizen?

>What does any of that have to do with ITU-R regulations?

What does all your pedantic, prissy confrontationism have
to do with morse code testing?

>No smiley?

Go kiss my yes.

>And FCC has repeatedly said the remaining code test would NOT be eliminated as
>long as the treaty remains as-is. Is FCC "wrong"?

No. Tsk,tsk,tsk...the prissy little pedant tried to explain GOALS
before and cannot understand the GOALS of the FCC. The FCC
has a GOAL to ELIMINATE THE MORSE CODE TEST.

It can't because of something else. Does it WANT to eliminate the
code test? YES. Go kiss my yes.

>> Sorry, it does NOT "conform completely." We've been over that
>> in another set of messages.
>

>How?

Go google, Alexander Dumass.

>What do you suggest?

Reverend Jim should get a better quality toke.

Then go kiss my yes.

>WHY? Would that make any difference to anyone?

NO morse code test makes any difference to anyone already
tested for morse code and licensed in amateur radio.

Take your confrontational misdirection and kiss my yes.

>So? What difference would it make?

Absolutely nothing to you.

Poor baby. 18 1/2 years and "seven hostile actions" later and
all Sgt Putzman learned was The ARRL Way. :-)

Military Intelligence operations and procedures require interception
of ALL opposition communications. Fort Huachuca is the M.I.
center for ALL US military intelligence training and their school
courses are made public by the US government...including some
images of classrooms and facilities. As part of communications
interception, morse code cognition is taught using computer
programs...and transcribing of interceptions to data/paper.

Some examination of public information will also reveal training in
various kinds of recording equipment for preserving the content of
intercepts. This is useful in review and checking of intercepts,
particularly with encrypted information; perfect five-character
"code groups" (encryption) copying can only be done by machine.
Interceptions of morse codings may range from very slow to as
high as 300 WPM equivalent (using "burst-coders" circa 1950).
No human being has ever been able to "copy" 300 WPM morse
by ear. :-)

In the descriptions of 200+ Military Occupation Specialties of the
US Army of today and the special requirements related to rank,
only certain M.I. MOSs and special operations communications
sergeants MOS are required to TRAIN for morse code. This is in
NO way indicative of tactical or strategic USE. In fact, doctrine
of special operations, any branch of the armed forces is NOT
public knowledge.

FOR REGULAR, ROUTINE, TACTICAL, OR STRATEGIC
COMMUNICATIONS IN THE UNITED STATES MILITARY, THE
MODES USED ARE VOICE AND DIGITAL DATA WHETHER
ON RADIO OR THE DEFENSE SWITCHED NETWORK.

>attitude. You and Brian BOTH seem to have trouble with the truth.

Danke, Colonel Jessup. :-)

["You can't see the truth!" - memorable line from "A Few Good
Men" motion picture with Jack Nicholson as Col. Jessup}

Read...and parse...the line I wrote and you quoted. In context
if you wish, or out of context as you usually do.

Commas have meanings, Herr Robust. Read it again. Try it
out loud if your finger stutters down the screen.

"See Roll" can be a separate sentence. "See Heil" can be
a separate sentence. Or they can be just separated by
commas as part of a single sentence. References.

That the dickiebird snarls and sneers down the hill is fairly
evident in todays bunch of newsgroup messages. Snarling
and sneering, certainly. Down the hill it must be as a result
of provincial ageism there and absolute refusal to accept
amateur restructuring.

Remember that public messages are accessible to all, not
just royal eyes-only, Herr Robust. Don't be so vain as to
think a reply to your message is meant just for You.

Now you get busy on learning practical diplomacy, oh
mighty veteran of the foreign service. You too can change
to being an asset instead of just a confrontational ass. :-)

> In attemping to "prove" himself master of SOMETHING, anything,
>AVeryFinePutz
>has instead shown himself to be grossly ignorant of any practical
>knowledge and experience in the field of HF radio communication and
>practical communications
>circuits in general.

Oh, my, Big Dick cut hisself and vented his spleen again...phew!

Poor lil guy...never worked in the Big Leagues of HF comm, only
thumping brass as an amateur.

>There is good reason why Shannon's theories are
>presented to
>prospective EE's *only* after a few years of college work.

And what are those "reasons" Big Dick?

The rest of the radio world accepts Shannon's Law as is,
not just students but scientists, engineers, and technicians
all. Well, all the technicians who've bothered to learn things
beyond changing boxes.

> Of course they are accurate but fail to reflect the realities of real world
>communications today, particularily ham radio, where 'optimal' is a word
>concerning virtually no one except theoreticians and design engineers
>intent on conserving the last bit of power, space, distance, time,
>efficiency.

Poor baby, didn't understand it so he "rules on admissability!" :-)

>It has so little to do with everyday ham radio operation as
>practiced by typical ham radio operators ON THE AIR that his
>presentation on
>this venue becomes little more than a sideshow.

Ooooo...amateur radio works on "different" physics than the
rest of the radio world?!? Weird science, Big Dick.

>In plaianer words, the
>world has never
>operated at or even near the "cutting edge".

No? :-) Not even in PLAINER words instead of "plaianer words?"

If you want less QRN while copying code, you switch to a
narrower bandpass filter? If so, you follow Shannon's Law.

>Technological advances
>always occur over time, and lots of it.

No kidding? :-)

>Sure, there are some modes out
>there now using super efficient codings. So what?

Big Dick used one of those through his computer modem.
Just think...56 Kilobits per Second on a 3 KHz bandwidth
plain old telephone line. :-)

>Nowhere near the
>horizon is a ham radio using only Shannon-optimized gear and practices.

No? :-) Okay, in Big Dick's universe there is no Pactor, no Amtor,
no PSK31, no RTTY, no slow-scan ATV, no fancy facsimile, no
DSP add-ons, no DSP built into amateur radio gear, and no EME
(which the rest of the radio world calls "moonbounce")...not any
ultra-slow on-off codings to set records over long distances with very

little power. :-)

Every single amateur radio practice and procedure HAS followed
Shannon's Law whether the amateurs realized it or not. :-)

>In AVeryFineSpeciman's jaded outlook that only offers him more
>reason to criticise things that exist while his presence on this
>newsgroup is no more that a body slam against hobbyists and a hobby that
>he has always resented and could never bring himself to attempt to join.

Who is this "AVeryFineSpeciman" in here, Big Dick?

I criticize only the little big men, the mental olde fartes who
managed to get amateur radio licenses and now think they
are amateur PhD equivalents. I criticize the credentialists,
the conservative traditionalists who think that tradition and
pretty certificates are EVERYTHING. I criticize the fantasy
role-players who conjure up non-existant "service" and then
demand instant obediance to their own mental myths.

I've said before that amateur radio is a fine hobby, can be
technically challenging, a learning experience as an enjoyable
recreation.

> Just the transition of analog broadcast TV to all-digital HD is causing
>more than enough shock in a world where dollar value must be given more
>and more consideration, again as has happened in the past.

Oh? DTV sets getting too expensive for you, olde-tymer?
Didn't prepare for retirement enough now that you are on
Social Security and Medicare? :-)

I know some of US DTV having done some work towards some
broadcast and cable test equipment on contract. Neat stuff,
really. MPEG picture coding (on two levels, actually) is not
intuitive but no problem, a single 40-pin VLSI chip can handle
both mod and demod. MPEG standards were derived inter-
nationally by an industry group. MPEG standards are behind
the DVD which is sweeping the TV-watching world...its a
digital system, not analog. DTV does some extra goodies
in packing an essentially 16 MHz bandwidth signal into 6 MHz
plus tossing in digital four-channel wideband audio and some
other data like simulcasting in other languages, etc.

> Of course Loose Lennie can't be expected to know that, nor much of
>anything else about reality.

Gosh, senior, I've lived in reality all my life...where you been? :-)

Worked in it too. In the last couple of years I got involved in
real-life DTV and broadcast TV...I believe that all TV stations
in the Los Angeles service area have converted now and are
doing the "double channel" thing. Not positive on that since
I've seen only two stations last year and we have a dozen.

> As ham radio continues to drop demands for technical knowledge right
>along with
>proficiency in Morse code, the idea that hams should be as adept at
>manipulating
>Shannon as if they were design engineers is as ludicrous as the idea
>that we should actually pay The Louse him any serious attention.

Tsk, tsk, tsk, nobody was saying things about "manipulating
Shannon ['s Law]." Claude Elwood, bless his soul, died early
last year. The relationship of information rate, bandwidth, noise
power, and information transfer error first published in 1947
remains today common to every single radio application world-
wide. Everyone accepts it...well, everyone but a few ascerbic,
bile-heavy traditionalists mired in the fashions of the 30s and 40s
who cannot understand basic concepts.

>I sure
>wish you guys would all start ignoring him again, as that's the only way
>we'll ever get rid of him.

No problem, Big Dick. I will go from here when the morse code
test is gone. I might leave earlier, tiring of all the profanity and
juvenility of all the amateur extras. :-)

>Someone said "The poor will always be with
>us". Same with Lennie the Louse if we don't begin to again give him
>exactly what he deserves. You figure out that that is.

Go kiss my yes, Big Dick. :-)

No, it is idiots like you who think you own the entire radio spectrum and can purchase a radio and operate anywhere you please with total disregard for any rules or any other service you may be interfering with. The hams aren't the only ones in a dither over it, the FCC is too, as evident by the stepped up enforcement that is causing a lot of headaches for some of your trucking 10-4 gud buddies, and you are going to see more.

Dave,

I don't think those hams are actually listening to the 136 kHz received
signals. Betcha both encoding and decoding are being done by computers.

Then there's the matter of ID'ing every 10 minutes....

Source record: 62840

From K4YZ

I said:
>>After a certain number of words per minute encoding/decoding is automatic, a
>>type of "motor-memory". Therefore it can be said that the 13wpm coders are
>>lazier than the 5wpm coders since they are relying on motor-memory.
Then K4YZ said:
>At 13 and greater WPM, the code is "heard" just like a second language.
>I
>don't "hear" the letters being sent...I "hear" the words.

So, you basically agree with my statement. By the way, how do you hear words,
not letters? The only way to hear words is if the letters are transmitted at
the same time. To learn addtional words, you must learn each word individually?

I said:
>>If a 13wpm coder "forgot" how to code at 5 wpm, this coder should relearn 5
>>wpm. Since these are two different skills, it seems a coder should learn
>BOTH
>>13wpm AND 5wpm.
Then K4YZ said:
> The epitome of silly.

Not silly if you want to learn addtional words.

From Dan/W4NTI:
>And your code speed is what?

I do not <Morse>* code, nor have an interest in <Morse> code.

From knowing someone that knows <a> code, I know that once you learn 13wpm, you
forget 5 wpm. It seems important to not "lose" your 5 wpm code skill <(if you
want to code at all, that is)>, don't you agree?

---
*You can read the paragraph without the bracketed words!

And THAT is exactly, Jim, as you know, why the regs are set up the way they
are.
Instead of it being the hams causing most of the interference to adjacent
bands, it is
usually the militant CBers who want everything, "'Far in the war'" (fire
in the wire).
Loud 'n Proud, Treetop Tall thar, mercy me thar, gre't day'. Thank goodness
some
sanity exists somewhere!

Noone would <automatically> be an asset. They would not be an asset, for example, if all they did is just attend meetings. They would be an asset if they used their knowledge and lead new <radio related> projects, homebrewing, troubleshooting, tuning, etc.

>Anyone who has such limited interest that they won't consider meeting the
>requirements because they include one minor one they would rather not
>fulfil might not be interested enough to be even involved.

Not true. One can get a technician class license and not have to learn code. They would have access to most of the same bands. You seem to be saying one must learn code to be interested in amateur radio. There are some interested in amateur radio, but not code.

>There are lots of
>people even engineers who hold licenses but do nothing with them. Even
>engineers.
>That doesn't make them an asset, valuable or otherwise.

True.

However, Ham Radio clubs don't want EEs in their hobby. Most clubs are interested in operating, contesting, Morse code, ragchewing, and other non technical pursuits, with the exception of antennas (many Hams are interested in that and quite good at that).

This non-interest at clubs tends to drive away the EEs and they don't join. The solution to this is to have clubs for these interests. Even if a <most> Hams are not interested in these aspects, activity and achievements in these areas would help the hobby as a whole.

Strange how one little requirement can elict such hatred!

Hard? who cares! It was "hard" to get my lifesaving certification. It was
"hard" to learn how to skate well. So what?

hint: sometimes something that takes a little effort is appreciated more
than something that is essentially "bought".

I've also heard that the military is thinking of bringing more of it back
in.

Anyway do you have a reference for the current use of Morse Code in the
military that I could cite when the topic comes up for debate?

Electrical Engineers would not automatically be either an asset or a liability. Like anyone else, they should have to pass the same tests and not get a free ride on an element they don't like. Like anyone else, whether they will be an asset or liability will depend on their particular personalities.

What makes a good ham is not the level of education or a person's qualifications.

I hope you realize that you are using the same logic as people who believe that 30+wpm Morse code is what makes a good ham.

It has a lot more to do with what the person is behind the ticket than their education or mechanical prowess.

But I *would* have to say that anyone who is too lazy to get a ticket because they don't "like" a part of the testing process isn't going to make a very good ham. Not in my book. If they don't want to do Morse, they can get a Tech ticket. So no barrier!

Can't be done! When I say that there are parts of the test that I don't
like, I'm serious. CW could be eliminated tomorrow, but that wouldn't
solve the relevancy problem. Whatever test question, there is someone
out there that doesn't like it, and thinks it should be gone.

Of the people that I have met that could not pass the 5wpm code exam, it all came down to the fact that they just weren't willing to study. They unrealistically think they should be able to get it in a few hours and then give up when it doesn't happen.

We all have to study things in our lives that we may or may not have a use for later on. They are included because they are considered to be part of a well rounded basic education. Geometry is an example. How many of us have used it since high school? But we were required to study it even though the people designing the curricula knew that most will never use it.

Cross-posted to: misc.transport.trucking,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.shortwave

Jerry, I'll grant that the frequencies near 10 meters are not the most popular and are not heavily used. The rules exist for a reason - obviously, we drive on the right side of the road. Now and again we read in the paper of kids that were racing (or whatever) on what appeared to be a deserted road at night (no one is using it) and an accident happens. Of course this is different than 'borrowing' frequencies, but the rules exist so we can all enjoy sharing the spectrum. Folks forget that it is far more than CB, amateur, and a few frequencies between 25 and 30 MHz. Television, radio, cellphones, heart monitors, and much much more depend upon rational sharing of the spectrum. That is what it is truly about.

73 from Rochester, NY
Jim
(I can hear the moans from my ISP about cross-posting).

>>Brian
>
>... and exactly what is it that makes you think I haven't "earned" the
>right to vent when I've had a belly full of your petty arguing?

Raymond:

For one thing, the "petty arguing" you vented about is a virtually
universal feature of most Usenet Newsgroups, and this one, in
particular, was designed to give such squabbles a place to live
in order to spare rec.radio.amateur.misc from the code/no-code
static. So your complaints serve to show your ignorance of the
history of this newsgroup and Usenet in general. If you don't like
it here, why don't you concentrate your efforts to your own BBS
and leave us be?

BTW, Brian and I have "earned" our right to express our opinions
in this newsgroup, and elsewhere, by sacrificing the best years of
our adult lives in military service in order to defend your right to do
the same. If you disagree with anything we or anyone else has to
say here, then, by all means, you get to state your own position.
However, what you don't get to do is shut us up! Whether you like
it or not, this newsgroup is a democracy, and Brian and I intend to
keep it that way!

>Geometry is an example. How many of us have
>used it since high school? But we were required to study it even though the
>people designing the curricula knew that most will never use it.

No, the people designing the curricula DONT know most people will never use it. Bureaucrats, who use vague guidelines such as "general education" requirements or "diversity" requirements, design the curriculum. The implementation is poor, but on the surface, the curriculum seems to meet the guidelines. The courses are often crude rationales to fit those guidelines.

Also, some truly relevant courses are not in the curriculum because of the narrow view of what one should learn in school. As a result "well educated" people can do differential calculus, but cannot change a flat tire.

Similarly, the SATs or MCAS tests make no sense in that they test largely irrelevant information that you must study hard for. The politicians use this and say they are for "standards". Standards, in reality, go down, because the irrelevant knowledge displaces useful skills the student can be learning. The standards would only go up if the information learned were RELAVANT.

>We all have to study things in our lives that we may or may not have a use
>for later on. They are included because they are considered to be part of a
>well rounded basic education.

Your analogy does not apply here. This is not a group of elements, this is just one element - code. And, we know that this element is irrelevant and uninteresting - so why learn it?

The <technical> General license class is tied to an irrelevant <non-technical, audiomotor skill> metric known as code.

>Can't be done! When I say that there are parts of the test that I don't
>like, I'm serious. CW could be eliminated tomorrow, but that wouldn't
>solve the relevancy problem.

The tests have a question pool format, and so it is very easy to pass it, often without learning the material. However, the written tests seem relevant and well balanced to me- IF one learned the material. Which part of the test do you find irrelevant. What relevant sections need to be added?

I hope not. I have heard some of these turkeys on HF aviation
frequencies and even on Search and Rescue frequencies. So don't
encourage them to do whatever they want, one of these days someone will
die because of them.

I don't believe they're listening to the stuff either, Jim, but somehow
we have at least two individuals here who both confuse the words
"proficiency" and "efficiency" and who seem to believe these two guys
are plodding along at .02 wpm as if that's the best they can do.

If you are satisfied with with the privileges afforded by a Technician
class license, your premise could be true. If you aspire to more, it
doesn't work at all.

> >There are lots of
> >people even engineers who hold licenses but do nothing with them. Even
> >engineers.
> >That doesn't make them an asset, valuable or otherwise.

> True.
>
> However, Ham Radio clubs don't want EEs in their hobby.

You keep writing these wild statements which have no basis in fact.
Your premise is just plain wrong.

> Most clubs are
> interested in operating, contesting, Morse code, ragchewing, and other non
> technical pursuits, with the exception of antennas (many Hams are interested > in that
and quite good at that).

Most clubs are interested in these things because most radio amateurs
are interested in these things. You can build all you want with no

license whatever. Your licenses permits you to operate.

> This non-interest at clubs tends to drive away the EEs and they don't join.

On the contrary, most engineers I know aren't interested much in just doing technical things at an amateur radio club. They go to club meetings to socialize--to chat with their fellow hams, have a couple of beers, compare notes on what they've done with their stations and to swap tall tales. Your claim has no basis in fact.

> The
> solution to this is to have clubs for these interests. Even if a <most> Hams
> are not interested in these aspects, activity and achievements in these areas
> would help the hobby as a whole.

I'm sure you have a lot of, what seem like to you, good ideas. After you've introduced your ideas at a club meeting and you see that no one expresses much interest, do you ever get the feeling that you're the odd man at the meeting?
Why not announce the formation of your very own club with emphasis on doing whatever it is that you believe hams should be doing? Let us know who shows up.

Nice rant, Vipul, except for the fact that there are a great many people
who don't view morse code testing as irrelevant. In addition, there are
those who don't find the morse code element uninteresting so "we" don't
know what you've claimed at all.

So what??? Very many electrical engineers have no interest whatever in ham
radio. To automatically
assume that one who "would get a ham radio license if not for the 5wpm code
test" would
automatically be an asset to the Service is too much of stretch of credibility.
Too many electrical engineers who really have no interest in Morse code have
learned and taken all the tests without
complaint or comment. Anyone who declines in advance isn't really intreresting
enough for it to
really matter whether or not he ever gets a license.

Just because there is an APRS icon for FireTruck, I wouldn't say THAT
much time has been spent on thinking about it (it only took about 15
minutes to design those cheesy DOS-era APRS icons).

> Thoughts?

Do it! If enough anti-digital types start giving you guff about
running this setup on the ARS, then set it up as a MURS station - we
would be GLAD to have you! (MURS is an unlicensed VHF radio service
allowing 2W TPO, external gain antennas, and digital communications).

The point of my question, does anyone in the group want to bring someone with a background in electronics into the hobby. Or, are we better off without them?

That would be unsupported rumor. That's so unlikely in the new
millennium that it isn't worth supporting. Really. :-)

>Anyway do you have a reference for the current use of Morse Code in the
>military that I could cite when the topic comes up for debate?

For the United States Army, go to

http://www.goarmy.com/jobs/index.htm

There you can look up (via word search) any MOS (Military
Occupation Specialty) with a short description. If you search
for "morse," you will bring up MOSs 98C, 98H, 98K (all of
them Military Intelligence intercept and analysis jobs) and
18E, Special Operations Communications Sergeant. An 18E
must know morse as well as satellite communications but
there is no specific, public doctrine for Special Operations.

Next, a good site for downloading whole Field Manuals
(released for public viewing) is the General Dennis J. Reimer
Army Doctrine and Training Library. To reach that -

http://155.217.58.58/atdls.htm

Click on "Library" button. This reveals a search-selection menu with two choices. Choose "Official Departmental Publications." Then select "Signal" and "Field Manual" from each column of the next menu presented. In there, FM 24-24 is a somewhat dated (1994) virtual catalog of signal equipment with illustrations and full specifications. Note: It is linked from a few amateur radio websites, specifically for those interested in military radio equipment.

There are several other FMs (Field Manuals in mil-speak) which might be of interest, but there are several to choose from. Some older than 1990 may mention morse code use but that is primarily for reference. Don't worry about any violations of classified materials...if you can't get it, you aren't authorized... :-)

For Military Intelligence ELINT/Intercept operations, you can view the course syllabi at Fort Huachuca's M.I. school. Go -

http://huachuca-www.army.mil

That's harder to wade through, but start with Military Intelligence School and follow through on subsequent pages. That is training for MOSs numbered "98." From the home page here is an interesting and well-done History of Military Intelligence (all branches) and notables, with some biographical material.

The Signal Center at Fort Gordon, GA, is the harder to navigate

http://www.gordon.army.mil

but again go to the signal schools, not the kiddies' schools listed under assistance for servicemembers and families. If lost, try to locate the 15th Signal Brigade which is the military school head for radio operation. "31-Charlies" train there (MOS 31C). Most Army signal communications MOSs are "31" numbers.

Fort Gordon website may be under some revision right now. They had several computer programs available for downloading, each on separate radio systems operation and field maintenance. Now there is only one such training program available. Gordon has two programs for the SINCGARS common small-unit radio, one done by the USMC. The SINCGARS family has been the common US military small-unit tactical radio since early 1990 and, so far, ITT Industries, Fort Wayne, IN, has produced and fielded over 240 Thousand SINCGARS sets. Voice and data on VHF, it can operate clear or encrypted via internal communications security as well as frequency-hopping. For more on that common family of nearly a quarter million sets -

http://www.acd.itt.com/singars.htm

ITT developed the "SIP" or Sincgars ImProved unit, now a half-size unit much better for individual manpack versions. ITT has

four nice PDF files on the original, SIP, airborne version, and a handheld compatible unit, the latter is a product not yet sold to the government for production. SINCGARS was never intended to operate by any manual or automatic on-off morse keying.

For competition to ITT, Harris RF Communications is trying to get a slice of the SINCGARS pie with their own prototype called the Falcon series. Harris is producing SINCGARS-compatible radios for the United Kingdom under the UK's "Bowman" family. For Harris information - http://www.harris.com

Harris also makes the HF transmitters used at the W1AW station. :-)

For general information on Army electronics, the Central Electronics COMmand at Fort Monmouth, NJ, website is -

http://www.monmouth.army.mil/cecom/

Not a great deal of information there since Monmouth is now a headquarters for production liason with contractors. If you know a specific product or a known contractor, you might get more detailed information (without registering) by navigating up to the home page and going from there.

For general searching of military communications, try search words of "Force XXI" (Force 21) or "Digital Battlefield." Both terms have existed since before 1994, should be well-known to defense contractors. Try to look in URLs that have "mil" in them since civilian/personal sites have older information that may no longer apply. The Foundation of American Scientists or FAS is an interesting place - http://www.fas.org and is a vast collection of both old and near-new information. FAS has had drawings of the radio room equipment of the USN submarines for several years, both boomers and the fast-attack boats, plus lengthy descriptions of radio types and their tactical use. No morse used on those subs except maybe for someone with a light blinker on the sail.

Neither the USN nor the USAF have explained as much as the US Army on radio equipment, but they seem to be working on it. General details have always been known to defense contractors and the electronics industry about all US military branches. USAF is slightly ahead of USN in websites... :-)

Searches for "morse code" will only come up with historical data on military doctrine. Some training is required by M.I. in the overall task of intercepting and evaluating ALL comm from an opposing side. For "behind enemy lines" romantic adventure, the US Army used available voice and data sets on the military UHF band in 1990-1991 Gulf War. Data was encrypted, sent at 1200 Baud to either satellite or JSTARS aircraft using the AN/PSC-2 set. Military now has such units

up to AN/PSC-5 models. Raytheon make one of the newer
ones.

Some source of information is from the industrial-strength
electronic publications such as EDN, Electronic Design,
RF Design, Microwaves & RF magazines and military
service magazines such as Signal about Army Signal Corps.
You can even access the National Security Agency and the
Central Intelligence Agency on-line. Both have snippets of
information from their rather private museums. :-)

A number of myths still abound, some of them overt fakery.
One such is the reported "morse key tucked away in the
space shuttle for 'just in case' situations." Pure fabrication
by a writer since such "tuck-away" places don't exist in
the basic STS and shuttle has enough back-ups on comm
and radionav if they manage to get back to the atmosphere
safely.

However, if you WANT to believe in morse codes, feel free to
read what you want, exaggerate what you want, and engage
in flights of fancy on the subject. It's a free country. As far
as the US military using morse codes for ANY communications
you are out of luck. Communications via the DSN can now be
encrypted on-line and at high speed.

My guess on this one would be that when the APRS unit and whatever transciever that it had would have to have a firefighter that is also a ham within the "control point" (range of ability to control transciever that is). Another question would be, are they "tracking" the firetruck for purposes of falling under the "business" of the department or just for notoriety???

As far as being "locked out" I do not believe that is a huge issue, as I am working on installing a rig at our fire station as well. (for ARES/RACES) I am the only licensed person on the department but I am working on changing that as soon as possible. Now here's a question.... if a firefighter is also a licensee as well as a ARES/RACES person, and working at the communications (radio room) of the fire department, can he do both if he is working a "disaster?" (something like a weather watch/SKYWARN or an actual disaster such as tornado?) I ask this in regards passing info back and forth between fire radios and the ham radios. Or would there have to be a ham who is NOT a firefighter doing that? (technicalities.....)

>
> I know the APRS software has a specific setting for FireTruck, etc so I
> assume those issues have been thought about??
>
> Thoughts?

If you are asking in regards to vehicle location, there is equipment already out there for that. It is called AVL. If you are asking more for having this stuff in a fire truck for "notoriety" purposes, then things would be a little different.... I am sure others have better insight towards this....

Well, I notice you've gotten rid of the "excessive emoticons".

Good thing, that could do a lot of damage to the world. ;-)

It wasn't originally made by Riley, either. Riley was "brought into" the
debate well after Larry lambasted me when I first posted to the newsgroup.
I contacted Riley about my callsign because I had dared Larry to and he
would not. He would not because he knew that, while Riley was most likely
not going to "like" my callsign, Riley would confirm that there was nothing
the FCC would do about it (as Larry had been threatening). Larry, I think,
also knew that Riley would be a gentleman about it, unlike Larry had been.

Kim W5TIT -- all I'm going to say about my callsign

Larry, if you feel that I directly accused you of having a "rapist
mentality," you are welcome to feel that way. It isn't the first time I've
ever seen that posted here about you and I doubt it's the last. So, if your
life is so miserably lacking at this point and you're happy to wander around
and be upset about this all day, far be it from me to take your pleasure
away.

I have a 5/25W 144Mhz ICOM transciever in our motorhome along with a Pioneer XM radio. When I key the mic the digital radio gets confused and stops playing Waiting a while or a power off/on cycle brings the XM radio back to life. Since it's difficult to listen to both at the same time I have not tried to find a cure. The two antennas are about three feet apart and the radios about a foot and a half apart. Both are on the same 12V source.

CW used to be a relavant exam requirement across the radio services.
The rest of the world moved on, "we" just want a riff-raff filter.

It was a one-way transmission on 136 KHz.

The amateur on the receiving end (USA) has no requirement to ID, and
isn't even required to be licensed.

The transmitter wasn't in the USA. Are you saying that you know what
all of the radio regulations are in the country where the transmission
originated?

This is the part where Heil says it isn't your responsibility to know
anything about the rules of the person on the other side of the
circuit. So quit worrying about the 10 minute thing. It's none of
your business.

IOW, you persist in clinging to your error even after it has been pointed out
by others.
>
> Hello?

Goodbye.

> I keep saying RECOMMENDATION because that is all
> what the ITU-R "Radio Regulations" are

You're mistaken. They're regulations. There are IYU-R Recommendations, but the
code test is a regulation.

And that's a plain, simple fact. Live with it.

> ...a common-agreement,
> honored set of standards. Not binding in law as we citizens of a
> country are bound...there is no enforcement arm of the ITU...just
> agreements.

So? S25.5 is a regulation, not a law. Guess what - FCC has incorporated those
regulations (including S25.5) into its rules. And those rules are binding. Live
with it.
>
>>> One, I'm NOT buying anything from ITU if I can get away from paying

No. I don't. You seem to - but you're not even a lawyer.
>
> There is NO "violation" of a non-law.

Nonsense.

> If Japan could do what it did,
> so can the United States or any other member nation of the ITU.

Maybe. Japan is an island nation, and its closest neigbors have few if any
hams. The USA and European countries aren't like that.

Perhaps the USA could do what Japan did - have an HF ham license that allows
QRP on a few bands. Would that satisfy you, Len?

>>Do you think the USA should adopt Japan's type of no-code-test HF amateur
>>license?
>
> Reverend Jim, I think you should quit snorting the cheap stuff

Yes! Bring them in, but not with a get in free card. Pass the same tests
that everyone else has to pass. If that person is going to be an asset
to the ARS they WILL be able to pass the required tests! If they can't
they won't be much of an asset then will they?

Then why don't you start an EE Amateur Radio Club in your area? The idea might spread and more spring up. We have been talking about being an asset to the ARS, here's YOUR chance to be an asset for once!

Darn it, Len. When are you going to stop posting facts? Its screwing
up their wildest dreams. You some kind of spoil sport?

(Of course, "Morse Code" just might be some super secret project being
developed to thwart terrs and tyrants, so maybe that's why it isn't on
public access websites.)

Why would we believe anything you say?

You say that if the message is 100% copy every time at 5wpm, that is not proficient.

All of Amateur Radio is about Fast CW on HF.

>> Sorry, bubeleh, Leonard H. Anderson (screen name of LenOver21)
>
>You signed it "Len Over 21".

Nope. It is NOT "signed." These messages don't allow handwriting.

You are seeing things again, Reverend Jim.

>> made a statement about RECOMMENDATION versus Regulation
>> before and still holds to that.
>
>IOW, you persist in clinging to your error even after it has been pointed out
>by others.

What "error" you pedant? I gave an OPINION.

You don't like certain opinions. Hand me your TS card and I
will punch it.

>> I keep saying RECOMMENDATION because that is all
>> what the ITU-R "Radio Regulations" are
>
>You're mistaken. They're regulations. There are IYU-R Recommendations, but
>the code test is a regulation.

YOU are mistaken...we aren't discussing the "IYR."

You must have BYOB to the party, Reverend Jim.

>And that's a plain, simple fact. Live with it.

Tsk, tsk, tsk...learn to LIVE with OPINIONS. :-)

>So? S25.5 is a regulation, not a law. Guess what - FCC has incorporated those
>regulations (including S25.5) into its rules. And those rules are binding.
>Live with it.

INCORRECT! If you are going to play-act the pedant all the
time, go thee to Part 97 and analyze to your little cold heart's
content.

FCC regulations (they are regulations, law, not "rules") bind
only RF radiation originating within boundaries of USA territory.
USA law applies to USA territory.

There are NO ITU "laws" binding. If you violate ITU "regulations"
there will be no ITU marshals to come knocking on your door,
there will be only USA marshals.

>> Your remark is irrelevant and confrontational.
>>
>So?

So...little prissy pedant, remember you are not a god of radio
by virtue of morsemanship and aren't always correct in every-
thing you write in here.

You appear to want everything EXACT down to the smallest
detail, then you go and make all those ERRORS so far in this
one posting. You can't have it both ways.

>> There is no crime
>> committed if a country goes against those "regulations" because
>> those RECOMMENDATIONS (called "regulations") are not law
>> of any country.
>
>You're simply mistaken, Len.

Just send the ITU Police to my door with a World Court Warrant.
INTERPOL can come along, too, for funsies.

My "crime" appears to be ruffling of your pristine feathers even
though you knew your job was dangerous when you took it...

>> The ITU-R "regulations" are NOT law.
>
>You're avoiding the question. Typical.

No, superchicken, nothing was "avoided." My OPINION was
explained to you and you could not see it, accept it, or abide
with anything different from your glorious self-defined self-
righteousness.

>> Poor baby...Reverend Jim thinks he is one of the Supremes.
>
>No. I don't. You seem to - but you're not even a lawyer.

I'm not a lawyer but I seem to be playing a construction worker
in here, chipping away at the concrete blockheadedness of
prissy pedanticsm you've molded yourself into. Too many
rocks in that morseman's concrete, doesn't have enough
strength to support magnificent morsemanship medallions.

>> There is NO "violation" of a non-law.
>
>Nonsense.

When I am on USA soil, only USA laws apply to me. Since
you recognize only this concept of "international law," I'll put
you down as NOT a USA citizen...an ALIEN.

The question now is, were you carded or were you saucered?

>> If Japan could do what it did,
>> so can the United States or any other member nation of the ITU.
>
>Maybe. Japan is an island nation, and its closest neigbors have few if any
>hams. The USA and European countries aren't like that.

Poor baby...a demonstrated anglophile and another European-
oriented easterner, all wrapped up in some weird territorial
superiority concept of Yurp Rulz!

Where is it written in any UNITED NATIONS bylaws about those
"exceptions due to isolation of any nation?" The International
Telecommunications Union is a UN body. Live with it.

>Perhaps the USA could do what Japan did - have an HF ham license that allows
>QRP on a few bands. Would that satisfy you, Len?

My only "satisfaction" would come from the destruction of those
clay pedestals you mighty macho amateur morsemen stuck
together out of ancient, crumbly play-doh.

Now don't you go crying in the corner about somebody making
fun of your opinions. Grow up and face reality, don't face New
England for kneeling at regular devotions on an official league
prayer rug. Don't trot out any territorial superiority bullshit about
"European centrism." I'm closer to Europe than most in ancestry
in here but am grown up enough to live in the entire world, not in
some yurp fantasyland of olde tymes. One planet, so far alone
in the universe.

Grow up and face the fact that YOU and YOUR OPINIONS aren't
"law" and that you are NOT a supreme god in amateur radio
where morsemanship is the epitome of amateurism. The rest of
the radio world has given up on morse and its "champions" are
now predominantly middle-aged white males who think they are
some kind of chieftans...while they vainly put off the inevitability
of newcomers with new ideas, new concepts not accepting the
ways of the Ancient Radiotelegraphy Service.

>> Go kiss my yes.
>>
>Kiss it yourself. I wouldn't get near it.

Poor baby...you only take "no" for an answer?

>Then what's your complaint?

You.

We could be in secret planning to thwart an Alien Invasion!

Secrecy was almost violated when the science-fantasy film
"Independence Day" was released.

Extraterrestrials who conquered space flight and gravity can't
be expected to know enough to decode morse code, could
they? After all, none of them know a damn thing about ham
radio since they are (are you ready?)...NOT LICENSED AS
RADIO AMATEURS!!!

:-)

And they got beat by a "computer virus" not by Morse Code,
they just used code to tell everyone "how" to beat them.

Now what operating system was that code programmed to run
on and how convenient was it that it would run on the alien's
operating system. And being able to upload it to the alien's
computer without being on their "network" and without a
LAN connection.

That movie seems like a poor example for everyone to use!

No, I do not. You said one becomes "lazy" as thier code speed increases.
I say you don't know what youa re talking about.

>By the way, how do you hear words,
>not letters?

The say way you look at the words infornt of you right now and see
"words", not individual letters.

I

D

I

O

T

There you have several letters, when each taken by themselves have no
meaning.

Put those words together, ie: "IDIOT", and you have a concept one can
understand.

Or do you?

>The only way to hear words is if the letters are transmitted at
>the same time. To learn addtional words, you must learn each word
>individually?

Nope.

>From knowing someone that knows code, I know that once you learn 13wpm, you
>forget 5 wpm. It seems important to not "lose" your 5 wpm code skill <(if you
>want to code at all, that is)>, don't you agree?

Absolutely not. No more so than if I slow down what I am saying in the
spoken word in order to speak to a non-English (as a primary language) speaker,
or to emphasize a point to a child.

More silliness, Vipul. More silliness.

>The <technical> General license class is tied to an irrelevant
><non-technical,
>audiomotor skill> metric known as code.

Wrong.

The United States is and remains a signatory to treaties that recognize
the ITU standards as law and the basis upon which our own radio licensing
infrastructure exists.

Until such time as the ITU regulations are changed and ratified by the
Congress of the United States (or otherwise recognized as final by them), then
the Morse Code test for the Amateur General Class license in the United States
IS relevent.

Unless, of course, you suggest that the United States not honor it's
treaty obligations? (ie: break international law?) Do you suggest that,
Vipul?

>amateur radio, but not code.

Vipul, would you please show me where Dick said a SINGLE WORD about having
to learn Morse Code for ANY class of Amateur license?

And please answer the question...NOT attempt to put words into another's
posts...

>However, Ham Radio clubs don't want EEs in their hobby.

How assinine! Completely idiotic!

>This non-interest at clubs tends to drive away the EEs and they don't join.

And you base this on what poll or survey? Your OWN experience? I STILL
contend your disatisfaction is based upon your OWN conduct at the various clubs
you've approached, and your "My Way Or The Highway" attitude has landed you
right there...out on the highway!

>The solution to this is to have clubs for these interests

Then shut up and get busy! You continue to harrangue Amateurs for not meeting your expectations, but I do not see any ACTION by you to fill the niche you seem to think needs filling.

>Even if a <most> Hams
>are not interested in these aspects, activity and achievements in these areas
>would help the hobby as a whole.

What would? Forcing topics at club meetings that the general membership is not interested in? Go ahead, Vipul...Start demanding lectures and presentations at club meetings that only a small percentage of members or potential members might be interested in, and then see how long THOSE clubs last.....

However, judging from what I read from your posts, you've already DONE that, hence your spiteful and insulting treatment of Amateur Radio in THIS forum.

Steve, K4YZ

Is there a Rabbi here?

And if you WEREN'T a putz, it might make a difference. But you ARE a
putz, and therefore makes NO difference.

>No, you prissy profane ex-corpseman, ITU doesn't have any
> "color-by-numbers" documents.

Oh...I see...So you HAVE been looking for one...

>"Regulations" to me are codified laws or orders which are enforced
> by lawful parties.

Hmmmm... I see...Then you are alleging that the FCC has NO enforcement
powers and is NOT a "lawful partiy"..?!?!

>If the ITU wants to make final voted issues "regulations," they
> can write it all they want. They are still just Recommendations,
> working standards upheld on an honor system.

And in the United States, we have accepted those "recommendations" as law.
Call them what you will, Lennie, they ARE codified into American radio laws.

>I just repeated what I wrote before on the HISTORY of my US
> Army Battalion and its evolution from 1946 to today. No
> "embellishment" there but rather a condensation of 57 years
> of specific history of a single unit.

None of which is germane to a single line of Amateur Radio regulation,
policy, nor supports any rant you have made year-to-date.

An "obfuscation"...A smoke cloud behind which to hide yet another
irrelevent ranting of a man for whom lying and tale-telling are routine.

>You are hardly a role model for becoming an extra anything,
> prissy puritanical yet profane corpseman.

What ever, Lennie....Talk to the hand....

>Call a rabbi that, Sgt Putzman...see how "serious" you are.

Why would I call a Rabbi that, Lennie? Are you a Rabbi? If not, you are yet again hiding behind yet another irrelevent rant.

>Using a Jewish-ethnic middle-european pejorative doesn't
> make it any less profane. "Putz" is synonymous with the
> American pejorative "dickhead."

Thanks again for yet another revelation as to the ethnic definition as to "putz".

What I DON'T see is any attempt by you to argue it. I guess if the shoe fits....Ya PUTZ!

The go ahead and operate a radio station contrary to ITU S25(et al),
Lennie, and see how fast the Federal Communications Commission enforces those
laws you claim aren't there.

>>Irrelevant.
>
> Your remark is irrelevant and confrontational

Whew! More POT/KETTLE/BLACK, eh, Lennie?

>Oh, excuse me, you wouldn't know about such things as never
> having served your country.

Lennie, the "Hide Behind KIA's For My Own Gratification War Hero"
admonishing someone for "not serving (thier) country" when same was not
mandated by law...

>There is NO "violation" of a non-law. If Japan could do what it did,
> so can the United States or any other member nation of the ITU.

That was Japan...A country that "rationalized" racial superiority to
justify genocide and has continued it's seperate-but-not-quite-equal policies
to this day.

>Perhaps the only reasons the USA hasn't done the same is the
> political pandering by olde farte morsemen...and that amateur radio
> is not a vital asset to the USA. It isn't worth the effort.

And perhaps it's because there was no popular support for it...Or perhaps
because they are a soverign nation with their own laws to follow.

>Reverend Jim, I think you should quit snorting the cheap stuff
> and not become such confrontational pedant with these
> subject misdirections.

Whew...even MORE "pot/kettle/black"...

>>Phil Kane has told us here that ITU-R is a treaty and is ratified by the
>>Senate. IS Phil Kane mistaken about that?
>
> Phil Kane is an attorney but he is NOT a Judge of the ITU Court
> or even any Supreme Court.

So...Phil must be a Judge in order to properly cite the law...?!?!

You can PROVE that his definitions and explanations are wrong?

>Membership in the United Nations by administrative and legislative
> processes signifies that the United States honors the UN bodies'
> purposes, goals, and member obligations

Yep.

>Has the Congress of
> the United States "ratifiied" anything specific about the Radio part
> of the International Telecommunications Union? I don't think so.

They proxy that power to the Federal Communications Commission.

Ergo they HAVE 'ratified" ITU.

>Has Congress of the US specifically "ratified" obeyance of S25.5?
> No.

By empowering the Federal Communications Commission to have authority over
telecommunicaitons matters, yes, they have...Unless, of course, you can prove
otherwise...?!?! (Citeable case law would be acceptable here, Lennie...)

>>Who else?
>
> You don't have a need to know. Go kiss my yes.

Now there's a professional and meaningful answer.

> Who cares? You weren't alive yet at that time. I was busy
> doing military communications for Far East Command Hq.
> That's professional radio work. My battalion got two Presidential
> Unit Citations for signal work while I was assigned to it.

It received those awards DESPITE your assingment to it, not because of it,
Lennie.

>>The correct way to dispose of an American flag is by burning.
>
> Tsk, tsk, tsk, not a LAW about that.

Sure there is.

>Are you a USA citizen?

Are you? How is it germane to the proper disposal of the United States flag? A Russian citizen can't read American law and then not understand what American law requires for proper disposal of an American flag?

>What does all your pedantic, prissy confrontationism have
> to do with morse code testing?

What do yours?

>>No smiley?
>
> Go kiss my yes.

Yet again?

>>What do you suggest?
>
> Reverend Jim should get a better quality toke.
>
> Then go kiss my yes.

And yet again...?!?!

>>WHY? Would that make any difference to anyone?
>
> NO morse code test makes any difference to anyone already
> tested for morse code and licensed in amateur radio.
>
> Take your confrontational misdirection and kiss my yes.

Yes, it DOES make a difference to those of us already licensed as those joining the ranks WILL have an impact on Amateur Radio TODAY.

>>So? What difference would it make?
>
> Absolutely nothing to you.

Wrong...EVERY new licensee has a potential impact on those already licensed.

Even YOU, Your Putziness....

I don't care for the satellite coms, and I think that knowing band
edges is a waste of a question and time. I'm not suggesting that these
questions be eliminated. It would be silly. Imagine that you wouldn't
take the General or Extra tests because you didn't want to bother with
the questions I don't like. But that is exactly what people are doing if
the won't take the tests because they don't like Morse code.

I fell sorry for them. They are missing out because of stubbornness.

OK, Brain, now YOU get to cite the post wherein I said "just wishing it
will make it true"

I did no such thing.

In as much as I have to assume you took a minute to hit the "reply" button
and then draft those words, you did it intentionally. To intentionally
misspeak in such a way as to misprepresent another's comments is lying.

Are you a liar, Brain? Or was this, like Lennie the Lame, a "messaging
error"...?!?!

Personally, I think you were lying. I specifically said above nothing is guaranteed. You even quoted me. So...Which way was it?

Steve

Thanks for the URL. I'm involved in a computer group where one of the moderators *loves* to take a swipe at the radio operators. We also have a Name That Tune contest. I've sent the URL to the group owner. This should be good for a chuckle or two :)

Thanks again,
Jim

snipppp

blah blah blah ...here we go again with this idiotic argument that I put in the same class as "CW gets through all the time". Where are all the "techno-advances" some tauted on the group regarding lowering the code to 5 WPM and the hordes of engineers it would bring in ???

If those engineers in their 9 hours days can't spend 10 minutes a night for 4 to 6 weeks to learn a new radio skill then perhaps they need to go on FRS or CB where they can be a true asset.

Ive heard the same arguement for 40 years. I think Ive found 10 engineers during that period. All on CW.

They are still wondering why thier OTHER "initiatives", ie: The Novice License, Incentive Licensing, Novice Enhancement and The No Code Tech didn't bring in all the techno-nerds they insisted would be knocking down our doors.

Latest version: "Restructuring". The only "big changes" were those who took advantage of the "upgrade" potential to General and Extra. The front door, the No Code Tech, has been unchanged since February 1991 and STILL offers access to 97% of all Amateur allocations...No code required.

>If those engineers in their 9 hours days can't spend 10 minutes a night for

Exactly. Other than Amateur-specific regulations and "practice" questions, what do they have to learn? If they can't hack that...there's always GMRS.

Very funny. The club could cover such topics as tuning, calibrating,
homebrewing, troubleshooting, antenna setups(common overlap with traditional
Hams here).

Sorry, couldn't resist.
How about the movie, Godzilla? All modes of communication were cut off. The only hope of saving the city from Godzilla was to send a message through some taxi cab freqs. The only thing that could send for help was radio contact. Although not mentioned, person that knows how to do that must have been a Ham. (I, myself would agree with that). Ham Radio saves the world!

By "a new radio skill", you mean Morse code. They would "learn a new radio skill" (just not the Morse code skill) by attending seminars, reading, or experimenting (if possible) .

Many spend alot of "free" time reading about the field, staying current in their jobs, and updating with courses/seminars.

Why should an EE spend the extra time to learn an outdated skill (code)? Especially, if they do not particularly enjoy that skill (code). This would take away from the time they are staying current and they would risk falling behind.

Also, EEs can be in a variety of areas such as digital, firmware, VLSI, controls, software, or other non-radio fields and may not be interested in amateur radio.

I guess my hinting is too subtle, so I'll put it another way.

Your postings indicate that you might have some trouble getting along
with people who don't share your views. You post about the obese hams at
hamfests, you dislike Morse code, and make some pretty outrageous
statements here in this group. You call Hams a cult, and refer to the
silly but harmless old Wouff Hong as a torture device.

Yet you expect hams to embrace you when you trot in with this sort of
attitude?

I live in the middle of Pennsylvania, in a University town. How did you know that the people at hamfests aren't EE's, do they carry signs or wear special shoes or something? Last time I checked EE's looked just like other people.

Nonsense. Everyone that I know who does code has no problem with operating at any speed from their own personal maximum on down. Of course it is stressful to operate at a speed different than one's own preference but that is a different story. The only problem with 5wpm when you are used to faster code is staying awake because the slow speed will put you to sleep!

This is a ridiculous statement! Yes, some can be smart enough to know it is a waste of time. You do not have to know Morse code to know it is a waste of time, OKAY?

Those that are familiar with the Shannon bound and where the various modulation schemes lie relative to this bound DO have the knowledge of the capabilities of the various modulation schemes and can access the performance benefits/tradeoffs of Morse code on HF. (Sorry for long sentence).

The people in this specialization DO have the experience in HF and ARE very knowledgeable enough to access the tradeoffs. You do not have to integrate the encoding/decoding scheme into your being to know these tradeoffs.

I suspect 16-QAM or some other modes beat out Morse code. I'm curious where Morse code stands. Anyone wants to make the <mathematically supported> claims? I would like to know. I don't care if Morse code "wins". I would acknowledge that. However, I still wouldn't want to learn it.

All digital modes requiring a computer (RTTY, PSK31,packet, etc) are
irrelevant. They don't require any particularly relevant radio knowledge
and should be eliminated.

So long as they pass the tests (no special favors), they are a potential
asset. Whether that ability is realized is entirely up to them.

My complaints serve to show that there are those of us who have been
reading these newsgroups for years, and are tired of the incessant
bickering going on between the factions headed by Larry and Kim. You
are both mistakenly possessed of a sense of self-superiority. The
fact of the matter is that are vastly more important things to discuss
than "your callsign is offensive" or "you don't do code, therefore
you're not a REAL ham." There are topics that can be discussed that
might actually result in an INTELLIGENT exchange of information,
rather that insults. Of course, if you're respective camps would
rather trade insults and insinuation, then so be it. Like I said,
might as well change the name of the channel to
rec.radio.CBWANNABE.policy.

>BTW, Brian and I have "earned" our right to express our opinions

>keep it that way!

Gee, I'm impressed by your record of military service. Okay, so I'm
not. Guess that's because for some reason I get the impression you
feel that I haven't done my part in the service and protection of this
country. Well.... I can show you my 813 so I guess that I've also

"earned" the right to shoot off MY mouth as I see fit. I also didn't say anyone should "shut up." My assertion is that there sure are a hell of a lot more important things to discuss than someone's hurt feelings.

Doesn't matter... You're obviously not going to change. Neither is the other faction.. Carry on with your petty bickering... Those of us with "real" lives will pity you as we see fit.

Actually they do know these things. The object is to teach basics in a broad group of fields so that the students have some basis to decide what direction they want to pursue when they go on to college. If the only math you've ever had is just enough to enable you to balance your checkbook, you won't have enough background to see if you might want to explore it further.

>
> Also, some truly relevant courses are not in the curriculum because of the

Calculus is not a fundamental in high school. It is an elective IF your school is big enough to offer it. In college, it is only required if you are going into fields like engineering, math, etc. English majors don't have to take it.

Changing a flat tire should be covered in Driver's Education if it is designed correctly. Granted some courses omit it but it should be included.

The

> standards would only go up if the information learned were RELAVANT.

Weird that you can spell irrelevant but not relevant. The SATs, etc really only apply to college bound students. These days, the tests are more important than ever in determining whether the student is ready to tackle college level material or will need remedial work since too many schools just give grades away.

Yes my analogy does apply. Something we must study equates to an element. There may be one or there may be more than one.

>
> The <technical> General license class is tied to an irrelevant <non-technical,

Good reading, from a Toronto newspaper's editorial page! 1999
------- ------------ ------------- ------- ---------- -----------------
Widespread, but only partial news coverage was given recently to a
remarkable editorial broadcast from Toronto by Gordon Sinclair, a Canadian
television commentator. What follows is the full text of his trenchant
remarks as printed in the Congressional Record:

This Canadian thinks it is time to speak up for the Americans as most
generous and possibly the least appreciated people on all the earth.

Germany, Japan and, to a lesser extent, Britain and Italy were lifted out of
the debris of war by the Americans who poured in billions of dollars and
forgave other billions in debts. None of these countries is today paying
even the interest on its remaining debts to the United States.

When the franc was in danger of collapsing in 1956, it was the Americans who
propped it up, and their reward was to be insulted and swindled on the
streets of Paris. I was there. I saw it. When distant cities are hit by
earthquakes, it is the United States that hurries in to help. This spring,
59 American communities were flattened by tornadoes. Nobody helped.

The Marshall Plan and the Truman Policy pumped billions of dollars into
discouraged countries. Now newspapers in those countries are writing about
the decadent, warmongering Americans. I'd like to see just one of those
countries that is gloating over the erosion of the United States Dollar
build its own airplane. Does any other country in the world have a plane to
equal the Boeing Jumbo Jet, the Lockheed Tristar, or the Douglas 10? If so,
why don't they fly them? Why do all the International lines except Russia
fly American planes?

Why does no other land on earth even consider putting a man or woman on the
moon? You talk about Japanese technocracy, and you get radios. You talk
about German technocracy, and you get automobiles. You talk about American
technocracy, and you find men on the moon - - not once, but several times -
and safely home again.

You talk about scandals, and the Americans put theirs right in the store
window for everybody to look at. Even their draft-dodgers are not pursued
and hounded. They are here on our streets, and most of them, unless they are
breaking Canadian laws, are getting American dollars from ma and pa at home
to spend here.

When the railways of France, Germany and India were breaking down through
age, it was the American who rebuilt them. When the Pennsylvania Railroad
and the New York Central went broke, nobody loaned them an old caboose. Both
are still broke.

I can name you 5,000 times when the Americans raced to the help of other people in trouble. Can you name me even one time when someone else raced to the Americans in trouble? I don't think there was outside help even during the San Francisco earthquake.

Our neighbors have faced it alone, and I'm one Canadian who is damned tired of hearing them get kicked around. They will come out of this thing with their flag high. And when they do, they are entitled to thumb their nose at the lands that are gloating over their present troubles. I hope Canada is not one of those.

I've seen fellows like Vipul show up at several general interest clubs.
The expound upon their grand ideas and promise a new age of
enlightenment. After a few meetings where no one demonstrates any
enthusiasm for their plans, they simply go away.

Quite a number of people who are not electrical engineers spend some of
their free time reading about their fields, staying current in their
jobs and updating with courses and seminars.

> Why should an EE spend the extra time to learn an outdated skill (code)?
> Especially, if they do not particularly enjoy that skill (code).

Answer: Because they have their sights set on obtaining an amateur radio
license granting HF privileges.

Great! Believe it or not, no one is going to force amateur radio on
those who have no interest.

Uhhhh, Raymond? This isn't a "channel". Feel free to start a few
threads about the things you think are important to amateur radio.
After starting them, don't forget to be a frequent contributor to assist
in keeping the flow of ideas going.

I do not know if this has been brought up in the NG in the past, but here goes.

My girl freind is studying for her Tech test. Some of the questions are in regards to band plans. After talking to some fellow hams, my question as well as theirs is.

Why does the ARRL include band plan questions, the band plans are NOT FCC regulations. In that regard, they should not be part of a test.

> of you that DONT.

An "export" radio is not a CB radio, Dan. And there is often potential harm in it - these highly modified radios are notorious for causing interference to neighborhood televisions, telephones, other radio equipment, and other electronics. And every instance of interference has the potential to directly impact ham radio operators - it creates another person opposed to radios (all radios) in the neighborhood.

I certainly do not want people using unauthorized equipment in my neighborhood. In addition to the potential interference with items in my home, the use (or acceptance of use) of unauthorized equipment says a lot about the character of the individual - perhaps illustrated by the "outlaw" mentality so pervasive in the CB community today. Whatever the case, "bad boys" in one thing are likely to be "bad boys" in other aspects of life (work, social activities, relationships, the neighborhood, etc).

Further, these highly modified radios often interfere with other CB'ers on nearby frequencies (channels) - reducing the number of usable CB frequencies, which encourages still more to move their communications outside the allocated CB frequencies to frequencies perhaps assigned to other radio services.

This is not exactly "recent" - I first saw it many years ago and it has been repeated many times since (every time some person wants us to feel justified in whatever is happening at the moment involving Canada). What I've never seen is the name of the newspaper, the date it appeared in that newspaper, the name of the television station Sinclair appeared on, or the date it aired. A Congressman can read anything into the Congressional Record (if it does indeed actually appear in the Record). That doesn't prove authenticity.

The band plans below 50MHz are indeed backed by FCC regulation. The band plans above 50MHz are voluntary at the moment, but may one day also be backed by regulation. Furthermore, compliance with the voluntary band plans above 50MHz is considered "good operator practice," reducing potential for interference and/or conflict. For those reasons, everyone needs to be aware of the band plans, which is why they appear on the exam.

It sounds to me like you are *exactly* as one of those "factions" you speak
of. You are complaining, above. Granted, it's about your own issues, but
could you define the difference between yours, Dave Heil's, Larry Roll's,
mine, or anyone else's methods? I daresay while you accuse others of having
a sense of self-superiority, you've acted on that very thing yourself.

"Doesn't matter"? Yet another display of the same things the rest of us do. It *doesn't matter* but you have posted at least twice/three times on this very issue--nothing else and certainly nothing of extreme import--and you say "doesn't matter." I caution you to get out while you still can :) This newsgroup is nothing but the same thing day in and day out; it's a text version of a good rowdy, violent, bloody, shoot 'em game, and nothing more. The same sickness that draws individuals to playing the graphic versions of them (the games) is the same sickness that draws most of us are here day in and day out. And, it's great fun. I can't think of anywhere else where I can spend 5-10 minutes, picking random or specific items to read and maybe respond to--get the angst from the day out, then settle down with a nice cup of coffee and a good show. Of course, it took me a while to learn that. I'd like to see a really good ham radio newsgroup--but I haven't seen one yet. This, *.misc, *.XXX are all the same--although this one is prone to *more* of the same...LOL

Well, the bandplans are supported by the FCC. Not a good way to explain that, but it's the closest I can come right now. And, isn't a good idea to include those items that are considered "good operating practice" since that is a part of the spirit of amateur radio (in the Amateur Code).

Yes, KB1HMW, I do.

Does compling with the law bother you? Do facts bother you? Are you an anarchist? Do you suggest we break the laws just because you think this is a law worth breaking?

Do I need to ask the question again?

Do you, Vipul Shaw, recommend that we, The United States, NOT honor our treaty obligations?

For all the time YOU spend in THIS forum griping and whining, denigratiing and humiliating (including rec.radio.cb), you could invest the effort to put this "program" into effect.

The evidence indicates that you'd RATHER gripe and whine, denigrate and humiliate, though.

>experimenting (if possible)

Still doesn't change a thing...If they can't invest a few minutes a day,
then it's obviously not important enough to get the license.

And since almost all "experimenting and homebrewing" (you're favorite pet
subjects) are in the higher frequencies anyway, Vippy, why aren't these guys
getting a No Code Tech anyway?

>Many spend alot of "free" time reading about the field, staying current in
>their jobs, and updating with courses/seminars.

So what? I am an ER Nurse. I spend a LOT of time in continuing education,
seminars and "updating" my knowledge in my field.

I STILL have time for volunteer woork AND Amateur Radio.

>Why should an EE spend the extra time to learn an outdated skill (code)?

For the same reasons mere mortals do it, Vippy. To get an Amateur Radio
license that bestows HF operating privileges IAW federal and international law.

>Especially, if they do not particularly enjoy that skill (code).

I ahd to learn how to give bed baths and trim toe nails inorder to get a
license to practice Nursing eventhough we don't do bed baths and trim toe nails
in the Emergency Department. Sucks, but I sucked it up, got through it and did
what I had to do in order to get through it.

Lifes full of that kind of stuff.

Some of it is mandated rules. i.e. The morse code only segment of 6 meters and 2 meters. There is the mandated part by the FCC and then layered on top is the band plans. While band plans are voluntary, it is considered good amateur practice to adhere to them. The person who is not adhering often be considered the one at fault if there is an interference program. For example if you operate simplex on a frequency that is used for a repeater in your area, you are at fault if you interfere.

Don't forget that the morse code only segment at the bottom of 6 meters and
2 meters IS backed by FCC regulation. Also I think there are regulations on
what areas satellites can operate but would have to double check.

All true. Also, radio communication is only a small part of electrical
engineering. I know plenty of EEs who would fail thewritten tests for a ham
license unless they studied for them, because their branch of EE has nothing to
do with radio.
>
>> Why should an EE spend the extra time to learn an outdated skill (code)?

Answer: It's not outdated. Hams all over the world use it. In some cases, if
you want to work a particular ham, you have to use code, because it's what that
ham uses.

Another answer: Because many find it to be fun to use, once a person has the
necessary skills.

Still another answer: Because it permits the use of simple, inexpensive
equipment .

Yet another answer: Because it offers certain advantages over other modes.

>> Especially, if they do not particularly enjoy that skill (code).

I agree 100% - and I'm an EE. Funny thing - it was ham radio that got me
interested in becoming an EE.

Another funny thing - I've been welcomed and recruited to join every ham radio
club whose meetings I've attended.

Perhaps it's the way you approach other hams, Vipul.

No, it makes perfect sense.

>Yes, some can be smart enough to know it is a
>waste of time. You do not have to know Morse code to know it is a waste of
>time, OKAY?

NO. NOT OKAY.

Try actually listening to the HF amateur bands for once, Vipul. Hear what's actually going on. All sorts of modes in use by hams - and Morse is one of the most popular, right behind SSB voice.
>
>Those that are familiar with the Shannon bound and where the various
>modulation
>schemes lie relative to this bound DO have the knowledge of the capabilities
>of
>the various modulation schemes and can access the performance
>benefits/tradeoffs of Morse code on HF. (Sorry for long sentence).

Sure. Guess what - on-off keyed Morse presents one set of tradeoffs and benefits. In some ways it is optimum and others it is not optimum.
>
>The people in this specialization DO have the experience in HF and ARE very
>knowledgeable enough to access the tradeoffs.

Does that include you?

>You do not have to integrate the
>encoding/decoding scheme into your being to know these tradeoffs. >

>I suspect 16-QAM or some other modes beat out Morse code.

You mean you don't know?

>I'm curious where
>Morse code stands. Anyone wants to make the <mathematically supported>
>claims?
>I would like to know.

Then figure it out. You're an EE, you say you're into homebrewing and technical stuff. It should be easy.

Here's a clue: You have to include ALL the various factors in the evaluation. For example, what the noise environment is like, stability of the equipment and propagation, complexity of receivers and transmitters, performance in a chaotic environment, etc.

>I don't care if Morse code "wins". I would acknowledge
>that. However, I still wouldn't want to learn it.

So what's the point of doing the exercise? You've already told us that no matter what evidence is presented, you'd be against learning the mode.

Good. How fast do you talk on FM? I'm going to judge if you are proficient.

795. Re: XM-Radio compatible with 2M/450?

Newsgroup: rec.radio.amateur.policy
Date: 2003-03-13 15:29:01 UTC
From: kf6vyh@aol.com
Message-ID: <20030313102901.07680.00000008@mb-cp.aol.com>
Source record: 62932

When I bought my 2002 Nissan fronteir then manuel mentioned not placing amateur radio transmitters within 8 inches of the gas peddal because they could damage the truck computer. The truck has a place for a CD changed behind the passenger seat that my FT 100D fit into, then I placed my 2M 440 radio under the pasenger seat. This truck even has a spot below the bradcast radio that had room for both control heads. Makes for a nice set up.

Would you believe it's almost thirty years old? It was first aired by
Sinclair on June 5, 1973.

http://www.snopes.com//quotes/sinclair.htm

has lots of info and links. It's genuine, all right, but from another
era.

The 'snopes' urban-legend site is a good one for getting to the bottom
of such stories fast.

Like during the Falklands War and our treaty with other American
states?

Or like the START treaty with Russia and the SDI system?

Nooo, you don't mean like those treaties. You choose something
insignificant and meaningless to latch on to.

Hey, watch it, Bud - I'm the one who actually did nit-pick about a small error like that. And I never reminded teachers they forgot to assign homework. Honestly. REALLY!!! :)

I've spoken to you on SSB, and you're not fast enough.

You're just not proficient. Sorry.

The sad thing is, it is the exact opposite of what actually works. Seems to me, a person should show up for some meetings, acquaint themselves with the regulars, and be respectful of the shakers and movers in the club. Then if it works, great, if not, time to move on.

go figure!

>Another funny thing - I've been welcomed and recruited to join every ham radio
>club whose meetings I've attended.

Another funny thing - the same thing happened to me at the
only two ham radio club meetings I've attended.

>Perhaps it's the way you approach other hams, Vipul.

Perhaps those two clubs didn't have the proper approach to
newcomers. Members at one of them were almost hostile
on knowing I'd already worked at a major military HF radio
station. The other one had too many bigots who took a KKK
stance against CB radio (in 1962). Members of the latter
also got into a physical confrontation with a ham who refused
to clear 3995 KHz for other members' mobile SSB fun in a
local area.

Yup...definitely a problem on "right attitudes." :-)

Yes it is...for the purposes of the only US agency granting amateur radio licenses determining if an applicant should be licensed. See FCC 90-53 and 99-412. The FCC doesn't think that morsemanship is relevant to proving an amateur's worthiness to be granted a license.

The only reason that US amateur test element 1 exists today is bureaucratic and an "international agreement." A paper-tiger irrelevancy.

Your postings indicate that you have some trouble getting along
with other radio people who don't share your views. You post old
mythology and urban legends about some nebulous superiority
of amateur radio over all other radio services. You've made some
outrageous statements in here.

Yet...you expect non-hams to embrace your hobby as some kind
of noble service to the nation with that fictional attitude? :-)

Now go off and show the world by working DX on HF with CW.
Keep up the Right Attitude. :-)

>Ham.
>(I, myself would agree with that). Ham Radio saves the world!

Heh heh heh...:-)

It's amazing how some cling to fantasies of fiction as "reality" if it "proves" their opinion!

I reside in an urban area where fictional entertainment is a major industry (Greater Los Angeles). The creators of fictional entertainment literally bank on the gullibility of the audiences accepting their fiction as reality if it is presented with a believable image. Feed the audiences fiction and they go into a "feel good" mood and come back for more emotional satisfaction.

I don't and didn't work in the entertainment industry other than some brief forays into broadcasting and voice-over audio work long ago. In the electronics industry everyone soon finds out that electrons, fields and waves to behave to fantasy ideas or emotional thoughts. Electrons and their laws of physics exist in reality. They don't work on emotional images, dreams of glory, majesty, titles or pipedreams of a hobby activity.

>and should be eliminated.

All those "digital modes" are "irrelevant?!?" :-)

"Digital" is on-off, binary state signalling. Morse codes require an on-off binary state signalling using a CW carrier. Ergo, morse code is irrelevant ! :-)

TTY doesn't "require" any "computer" to operate. Teleprinters were doing written communications just fine at the turn of the preceding century (1900). So much so that they were beginning to displace landline manual telegraphers.

The "computers aren't radio-relevant" deux ex machina attitude is curious. Hardly any of the modern amateur radio HF transceivers and receivers will work without the aid of at least one internal microprocessor or microcontroller. Note: A microprocessor is a little computer on a single chip in an IC; a microcontroller is a microprocessor with some added electronic functions.

Morse code itself is NOT "radio knowledge." It is just on-off signalling that was first used in hard-wired land communications beginning in the year 1844. Absolutely NO "radio knowledge" needed to be a manual telegrapher before 1896. That's 52 years of NO radio whatsoever!

Early primitive radio technology of 1896 and for about next two decades used on-off "modulation" because that was the only practical means to communicate anything at all. Audio modulation of any "radio" at the beginning of the previous century was extremely rare. Early radio used only the LF and VLF portions of the EM spectrum...therefore, by early radio standards and practices, MF, HF, VHF, UHF, and up were "irrelevant to radio!" :-)

By extension of that illogic, early radio using vacuum tubes worked just fine without any semiconductors...therefore all the solid-state devices used today are "irrelevant radio knowledge!"

Dee, you are chronologically younger than I am and I do NOT belong in the "spark transmitter and crystal set receiver" set of brass-pounding olde tymers (I was operating RTTY trans-

mitters on HF professionally a half century ago without any computer assistance of any kind). If you want to hold everyone back to a bygone era, a time when none of this group's participants were even born, go work up a demand to make US amateur radio the "Ancient Radiotelegraphy Service."

Keep on recreating the past in all its mythological glory and wonderment. Keep everything primitive because it is too difficult to embrace any new knowledge. Keep the state of the amateur radio art as it was when the world was young (to you). Old ways are simple, secure, known, with plenty of literature references. That way is stability, no stress, and time is frozen without danger of tomorrow. Nirvana.

>Couldn't they use that low freq stuff for underwater applications?

The USN does use "low freq stuff" on ELF...but it isn't morse.
Submarine alert messages are in encrypted data form using
a towed antenna under water. The receiver and signal processor
are essentially automatic, only partly attended in attack sub
and missle sub radio rooms.*

If an alert signal is received and decoded, the submarines might
go near the surface to use higher-than-ELF radio bands for more
details.

Days of "Fox Scheds" long since disappeared in the USN
submarine force.

* Nobody here has any need to know more...unless they want the
final label of "SK." :-)

I was attempting to make the point that those who tout the supposed wonder and superiority of the computer aided digital modes are espousing are off base. If CW is irrelevant so are all other digital modes.

> [big snip]
> Old ways are simple, secure, known, with plenty of literature

After your long and tedious non-sequiter that had nothing to do with my point, I will address this point. Any activity needs to keep a blend of old and new. To automatically throw out the old or refuse the new are both equally foolish. Sometimes new works better, sometimes old works better. New isn't always better, old isn't always secure.

Your long ramble was a far departure from the point and generally irrelevant.

>
>Kim W5TIT -- all I'm going to say about my callsign

Kim:

When did I EVER say that I was going to "complain" to the FCC about
your call sign? Please provide the usual proof.

I have always stated clearly that YOU are the only one who can do
anything about your call sign, and your lack of willingness to do so
only proves your obstinate, defensive attitude toward it. As a
result, I shall no longer suggest that you change your call sign. You
have proved quite clearly that you are not capable of doing the
right thing, and persist with your child-like, hold-your-breath-until-
you're-blue, stamping-your-feet-on-the-floor temper tantrum. You
no longer deserve, nor shall you receive, the benefit of the doubt.

You obviously do not possess the intellectual or emotional maturity
necessary to have whatever you say taken seriously. Therefore,
your continued participation in this newsgroup will serve only to act
as an annoyance to your intellectual and moral superiors.

>
>73
>John
>KF6VYH

The bandplans, particularly those that apply to the HF bands, do consist of restrictions stated in Part 97 FCC regulations. A Technician who has not passed the 5 WPM code test would need to know this before he/she attempted to operate in the 10-meter phone segment, as an example. Therefore, bandplans are necessary information to cover in the question pools.

>>and leave us be?
>
>My complaints serve to show that there are those of us who have been
>reading these newsgroups for years, and are tired of the incessant
>bickering going on between the factions headed by Larry and Kim.

Ray:

The existence of "lurkers" is well-known to most of us; I receive fairly
frequent via E-mail from them, usually in support of points I've made
in recent posts. Then there have been the ones, such as your own,
who have basically told me to take a long walk off a short pier! So
stop trying to flatter yourself.

> You are both mistakenly possessed of a sense of self-superiority.

Well, Kim certainly is! My claims of being things like "morally and
intellectually superior" are made strictly in comparison to Kim, and
don't encompass anyone else in the newsgroup -- at the moment.

> The
>fact of the matter is that are vastly more important things to discuss
>than "your callsign is offensive" or "you don't do code, therefore
>you're not a REAL ham."

And I don't disagree with either of those points. However, THIS
particular newsgroup is where the code/no-code debate lives, it was
created to give the code/no-code debate a home where it would not
contaminate other newsgroups. Get a grasp of that concept, and
you will then understand why your objections are only serving to make
yourself a target of typical newsgroup denouncement.

>There are topics that can be discussed that
>might actually result in an INTELLIGENT exchange of information,
>rather that insults.

Again, I vehemently agree! And with literally thousands of other newsgroups to find such intelligent exchange of information, why do you feel the need to waste your time upbraiding us for not meeting your own BBS Sysop's standards of behaviour?

>Of course, if you're respective camps would
>rather trade insults and insinuation, then so be it.

That's exactly right. So be it. Now either get off your pulpit, or just go away. YOU are not going to alter the nature of this newsgroup even if you post ten megabytes of reprimands each and every day! YOU have no power here, Ray -- and we're not about to give you any!

>Like I said,
>might as well change the name of the channel to
>rec.radio.CBWANNABE.policy.

Hey, if you want a newsgroup by that name, by all means, go ahead and create it. However, you won't have any power there, either!

---some snippage---

>Doesn't matter... You're obviously not going to change. Neither is
>the other faction.. Carry on with your petty bickering... Those of
>us with "real" lives will pity you as we see fit.

Hey, now THERE's the spirit! Resign yourself to the fact that we're not going to change at your demand, and toss in a parting insult in the same breath! I think you're finally getting the hang of this newsgroup thing!

>"think" themselves well. Don't try expanding the scope of the process
>to doing anything other than using their minds, like you just tried to
>do, then calling me a liar. It's not working.

Well, Brian, then don't put quotation marks over some set of words when
citning something I was alleged to say when you know in fact I didn't say it.

Doing it again will just result in dispensing with any amenities.

As for "think(ing)" themselves well, I didn't say it.

If you insist I did, then I will insist you are lying. The difference
being I can cite the posts where you have put quotations over statements of
things I never said, and THEN requote the posts of what I DID say.

Manufacturing "quotes" is lying.

Now, do need to explain it to you in another language?

Steve

>Vipul, Most hams are not EE's. Most hams will never be EE's.

Okay, thats demographics. Fine.

>Amateur
>radio wasn't set up to be a playground for EE's.

Why not? With the license you get band priveleges. Its what you can do with the license. An amateur radio organization of those with the same interests makes accomplishing this easier. It seems like the perfect setup for "a playground for EE's".

I once heard rrap described as "the cyberspace version of a barfight"...

While it's not all like that, this IS the right newsgroup for an argument.

>I'd like to see a really good ham radio newsgroup--but I haven't seen one
>yet.

I have found that rec.radio.amateur.homebrew and rec.radio.amateur.boatanchors
are usually very well behaved. If you ignore the endless "fractal" and
"cross-field" debates on rec.radio.amateur.antennas, it's pretty decent, too.

Where I've found real gold is in the email reflectors, like the Elecraft, CW,
HBR, and glowbug reflectors. Part of that is because folks cannot post
anonymously, and part is due to the presence or implied presence of a
moderator.

>Why not?

Because most of the worlds most famous and prolific inventors contributors
to science and technology were NOT college educated, let alone engineers.

>With the license you get band priveleges. Its what you can do with the
>license.

Yep. A whole lot of shaking going on, huh? So why DON'T your EE buddies
get licenses, Vipul? Ninety-seven percent of all Amateur allocations can be
had for a 35 question test and NO Morse Code examination. That's a whole lot
of RF for a very small investment.

Or are you going to try and convince us that the couple of hours they
spend studying Amateur regulations (all they SHOULD have to study, since the
principles of RF are the same) will send them into a screaming fury...?!?!

>An amateur radio organization of those with the same interests makes
>accomplishing this easier. It seems like the perfect setup for "a playground
>for EE's".

Sure it does. And the only thing keeping "them" from being one of "us" is
a few minutes at a VE session. Afterall, it IS you that keeps telling us how
easy the tests are, Vipul...

Possibly only if they knew of what has been allegedly said here in this newsgroup. Had I never seen Kim in here at all, and just merely stumbled on the callsign, not knowing it was a vanity call, I wouldn't be bothered much. Nor would my father, he is a former priest. I have even gone as far as to ask some people locally around here about this whole situation to get a different perspective. The majority did not seem to be overly concerned about it. For all they knew, it could have been a sequentially issued call....

It may draw a chuckle out of some, but overall, if the word TIT is the worst a person has ever heard, they have lived a way too sheltered life. Only here in R.R.A.P. and in her own local area might they know the story behind the call. As far as "bringing amateur radio one step closer to extinction," I would have to say it is one small step on the stairwell of a 100-story building.....

Seems like the opposite would be more truer than that.... Seems like an Electrical Engineer would make a better (at least slightly) due to the idea that they should already be good at the electronics theory and may actually be receptive to the radio theory. I can't say this as a fact, it's more of an opinion..... or viewpoint.

Agree with you there. Med protocols change from time to time, as well as new processes and equipment come into play, and keeping up is extremely important, as well as review of the concepts that are more "static" in nature.....

Here's a question for y'all.... I hear there is going to be a change in the question pools, which license class?
I am interested because I want to get the "Now Your Talking" book for a friend as a gift, and if there is a change in information, I would rather get them the up-to-date version. If it affects the Tech class, my decision to wait to purchase the text for them may have to wait.

Thanks,

John, which question(s) in the Tech test are you questioning?

I only see questions about frequency limits of different bands and the definition of band plan.

A DD-214 is a Release From Active Duty, not a "discharge paper."

An 813 is a nice power amplifier tube. An 833 is even better. :-)

A 4CX10,000 is even more powerful! :-) :-) :-)

Oh? So...on what do you base this new revelation on?

Most of the cellular telephones are definitely digital. About one out
of three Americans have a cell phone subscription, either their own
or from work. That's about 100 million or so, give or take... Cell
phones may be "irrelevant" to you but certainly not to millions of
Americans.

>New isn't always better, old isn't always secure.

Who was "automatically throwing out anything old?"

Spark is definitely old...the first RF generation source in radio.
It got made illegal to use in the USA years ago. Not an

"automatic" process.

There's still a morse code test required for a US amateur radio license exam for any license having below-30-MHz privileges. A morse code test has been required since the first US radio regulating agency started in 1912.

Other than some commercial maritime applications, the rest of the radio world either dropped morse code or never considered it in the first place.

Half a century ago I was operating HF transmitters running RTTY trans-Pacific, not a single one of them using any on-off keying morse coding. Maybe that's "irrelevant" to you but not to the US Army and the Far East Command Headquarters during the Korean War.

>Your long ramble was a far departure from the point and generally
>irrelevant.

"Irrelevant!" :-)

Yes, I don't have the "Right Attitude" for the Ancient Radiotelegraph Society (ARS).

The only "relevancy" for this ARS is worship, reverence, and love of manual telegraphy. :-)

Noooo...you're just being obstinate and confrontational.

Aren't you one of those "Right Attitude" maintainers? :-)

> I do PSK31. 8^)

You want some kind of RSGB award for that? Peter Martinez innovated that mode and he has written in Radio Communication, the membership magazine of the RSGB, for at least 30 years. Name some American amateurs who've done true innovation in radio over the last 30 years.

There were actually two versions, one by Sinclair and another by someone seeking to cash in on the editorial. Sinclair donated all of the proceeds to the Red Cross, and his imitator agreed to do the same to avoid a lawsuit.

Yes, it fits the Watergate time frame quite well. Also the withdrawal from Vietnam, the first energy crisis, stagflation, etc.

As to why not, read Part 97 then check with the FCC if you have further
questions. EE's can and do participate but they do so on the same basis
as anyone else who passes an exam.

The US almost routinely abrogates treaty terms when the mood strikes
us. Ignoring S25.5 wouldn't even be noticed in the diplomatic
community. Do you see any protesters in front of the Japanese
embassies around the world for their lack of compliance with S25.5?
Should we break diplomatic relations with England over their new
code-free HF license class?

With all kind wishes,

de Hans, K0HB

Thanks, Jim. I knew I first heard that years ago, but wasn't sure when. Now I know it could have been anytime over the last twenty-five to thirty years (and, no, I didn't realize it was that old). Perhaps it is time to retire that thing - and find something a little more recent.

> Someone had to make the call and I did. You're just not proficient.

> Too bad.

Facts don't lie, Brian. In the CQ Worldwide SSB DX Contest of '91, my average hourly rate (which includes time spent listening, sleeping, bathroom breaks, CQing and eating) was 135.43 QSOs per hour. My highest hourly rate was over 300 contacts per hour. My score, as published in CQ, put me in the top ten worldwide. I'm proficient in the use of morse; I'm proficient in speaking. Aside from morse code proficiency, one area in which you and I differ is that I'm also proficient in the comprehension of the written and spoken word.

You just don't have enough information to make a judgement. Get back to me when you have enough experience to make such a call.

Dee
I'm not one of those people that you know personally, but I am
one of those who are glad that we were required to learn code.

New pool for technicians takes place this summer and the new "Now You're
Talking" is already available. Just make sure you check the info that says
what question pool it is for as some places may still have the old one on
the shelf.

Technically speaking England's is not code free. They have to demonstrate some knowledge of it. However they have chosen to put a spin on it that doesn't require receiving or sending.

My statement is not at all ridiculous. Of the people that I personally know who didn't like Morse code but did it anyway to get their licenses, the majority of them decided after they had some experience that it was valuable and they were glad that they were required to learn it as they would not have explored it on their own. This is by their own statements.

Kim:

Is selecting a Vanity Call Sign that is demeaning to YL hams and incites
prurient interest something that is in "good amateur practice?" Is it in
the "spirit of amateur radio" and in keeping with the Amateur Code? If
you say "yes" to any of the above, then get 25 other licensed hams
to agree with you, have them post their agreement in this newsgroup,
identified by name and call sign, and I'll never make another posting
about your call sign. None of them can be current regular participants
in this newsgroup.

Failure to meet the above standard of proof will be construed that even
YOU don't think you made the proper choice of call sign, since you won't
take action to defend it.

But opinions do. Regardless, do we (Americans) really have to depend on something said 20 plus years ago to stroke our egos? In the end, our allies have probably shown about as much respect and appreciation for this country's contribution to WWII as we have shown for their country's contributions to our many wars then and since.

>
> Nope. It is NOT "signed."

Yes, it is. But your name doesn't appear in that post.
>
>>> made a statement about RECOMMENDATION versus Regulation
>>> before and still holds to that.
>>
>>IOW, you persist in clinging to your error even after it has been pointed
>>out by others.
>
> What "error" you pedant? I gave an OPINION.

No, you referred to a Regulation as a Recommendation. That's a mistake, plain and simple. S25.5 is part of the Regulations. Recommendations are a different section.

You can say that it's your OPINION that black is white, up is down, etc., but you'll still be mistaken.
>
> You don't like certain opinions.

Why should I "like" opinions that are based on untruths?

You don't like any opinion or fact that proves you wrong. You can't take strong opposition to your cherished mistakes.

>>> I keep saying RECOMMENDATION because that is all
>>> what the ITU-R "Radio Regulations" are
>>
>>You're mistaken. They're regulations. There are IYU-R Recommendations, but
>>the code test is a regulation.
>
> YOU are mistaken...we aren't discussing the "IYR."

Just a typo. Do you never make typos?

>>And that's a plain, simple fact. Live with it.
>

> Tsk, tsk, tsk...learn to LIVE with OPINIONS. :-)

You sure have difficulty doing that. Practice what you preach.
>
>>So? S25.5 is a regulation, not a law. Guess what - FCC has incorporated

binding.
>>Live with it.
>
> INCORRECT!

How? FCC still requires a code test for HF amateur licenses, specifically
because S25.5 requires it. That's incorporation of S25.5 in US rules, regs,
laws, whatever you want to call them.
>
> FCC regulations (they are regulations, law, not "rules") bind

> oriented easterner, all wrapped up in some weird territorial
> superiority concept of Yurp Rulz!

I have no idea what that is supposed to mean.

The fact is that FCC has specifically said it will NOT violate S25.5. FCC makes
the rules and enforces them, not you. Live with it.
>
> Where is it written in any UNITED NATIONS bylaws about those
> "exceptions due to isolation of any nation?" The International
> Telecommunications Union is a UN body. Live with it.

So what's your suggestion to the FCC? Violate the treaty?
>

I'll take that as a "no".

Len, it's clear your whole purpose here is tossing insults and wasting time.
With every post, you make it more clear that:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior.

Your hobby is wasting time. Others' time. But not my time.

Seems that the rocks in the concrete under "the mighty morsemen" have
worked pretty well for almost 90 years...

>> Poor baby...a demonstrated anglophile and another European-

Again...seems to me that "play-doh" has held together pretty well for
almost 90 years.

>Len, it's clear your whole purpose here is tossing insults and wasting time.

"Pathological Liar" sums it up a lot more abruptly.

Putz is a bit more descriptive.

Absolutely not. I don't know of anyone who's done that. Is acting the way
you do in the spirit of good amateur practice?

>
> Is it in
> the "spirit of amateur radio" and in keeping with the Amateur Code? If
> you say "yes" to any of the above, then get 25 other licensed hams

> in this newsgroup.
>

Well, let's see. First, how could anyone say "yes" to the above? I don't
know of anyone who'd agree that selecting a Vanity Call Sign that's
"demeaning to YL hams and incites prurient interest" would be good amateur
practice. Nor, do I know anyone who's done so. Secondly, why would your
statement "and I'll never make another posting about your callsign" be
something that interests me, Larry? Or, were you directing that to me?
You're free to post anything you wish and as much as you wish about my
callsign--or anyone else's for that matter. Why would you think otherwise?

>

>

Well, whatever. Like I said above, you live in a free country, Larry. You think however it is you wish to think--about anything you wish. Is it that I respond to you that you think your statements about my callsign bug me? OK, I'll stop responding.

Down there in New Orleans, they brag about N5QXX as the longest echo linked repeater. The real truth is that it isn't.

Oh yes, if you take a look in the repeater section of Echolink, you'll find N5QXX all right, but you won't be able to link to it. Instead, you'll get an "access denied" message, because only a small number of people are allowed to use it.

So why is it on Echolink at all? Your guess is as good as mine, although I tend to lean toward the explanation that the club wants bragging rights without having to actually perform as do other linked repeaters.

What a bunch of morons. They should be cut off from Echolink.

No, Dave, that's not it. 0.02wpm sets a world record, and that's a fact.
I can make just as many arbitrary claims as you can, re: 5wpm not proficient.

Sorry.

"(My) way of thinking", Brain?

I've not stated how it SHOULD be... I have pointed out how it IS. Taht Japan or anyone else should decide to not adhere to the letter of the law is their business. I am not Japanese. I am American, and I expect MY country to adhere to it's treaties and agreements it signs.

Unless, of course, you can prove otherwise...?!?!

>> Otherwise you are a liar. You've gone too far to just be confused.
>
>No Steve. Here's a challenge for you. Think yourself well.

First of all I am already in pretty good health. In as much as I had been told on prior occassions that I would suffer permanent injury from accidents serious acidents sustained, yet am at the level of functionality that I am at, I would have to say that proper mental attitude contributed to my successful recovery.

Again..I said contributed. As I did in the original post.

But having repeatedly insisted that I said something that I did not, and then insisting that I "prove" the validity of the correctness of what I did not say, Brain joins the ranks of Lennie (The Lame) Anderson and Markie (I Am A Gay Draftee Pagan Officer In The Army) Morgan.

Whew...some company there, Brian. Proud of yourself? I gave you all week to either let it drop or "prove" your assertions, but you insisted. Now you are in the bag with the other idiots, right where you belong.

Don't worry...I forsee another joining you soon unless HE realizes that lying and making up things others did not say is foolhearty too!

Too bad for you.

There are some EE's in your local clubs? What about the rest of the
hamr radio world not wanting them? You told us that was the case.

>
> So, it is only a Ham radio playground for contesting, etc.?

I didn't write that. Part 97 will tell what amateur radio is. I am
amazed that you actually obtained a license without finding out what
amateur radio is.

> You said "As to why
> not", so this must mean its not allowed.

"As to why not" referred to amateur radio's not being set up as simply a
playground for EE's.

> How does Part 97 forbid experimenting
> and building circuits on those frequencies?

One doesn't build anything "on those frequencies". Part 97 does not forbid building or experimenting by any radio amateur. No EE degree is required for doing so. For that matter, you can build all you want without any amateur radio license.

It certainly is. It is one which has nothing to do with the code
proficiency of either ham.

> I can make just as many arbitrary claims as you can, re: 5wpm not proficient.

The big difference I see between us is that I use pertinent facts to
make a point while you misinterpret the facts you've seen. You still
seem to confuse the words "proficient" and "efficient".

<Our Gal Flint> writes:

>Since you persist in jumping to conclusions that are not inherent in any of
>my statements and then digress to unrelated material, it is meaningless to
>even attempt to hold any conversation with you.

Tsk, tsk, tsk. Public newsgroup messaging is not "conversation."
Never was.

Everyone's writing is ALL that anyone else can see. Whatever you
feel "inherently" must be stated in textual form. The most anyone
else can divine from text (that all see in same form) is the similarity
to a certain group's previous statements.

If I detect a strong similarity to old PCTA smug arrogant
sacramental statements, I won't hesitate to comment on such.

>Although I've allowed myself to be drawn in from time to time, I shall
>continue to resist the urge to respond to your nonsense.

Tsk, tsk, tsk...use of the word "nonsense" in the above sentence
is clear personal loading of a statement to reflect your viewpoint.
No telepathy necessary to "read" it in context.

Since many cannot take strong opposition to their self-righteous
opinions (such opposition is a "mistake" or "error"), at least one
has come up with a standard boilerplate response for roaring
back when all else fails:

>N2EY: "Besides, here's a simple, plain fact:
>
>No matter what job, educational level, employer, or
>government/military service that a radio amateur has, if said radio
>amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
>Anderson's insults, ridicule, name-calling, factual errors, ethnic
>slurs, excessive emoticons and general infantile behavior."

See how simple that is? No straining of originality neurons,
no need to argue the substance of any subject, just reject an
opposing opinion with a little rubber-stamp-like macro. :-)

Just attack the messenger, not the substance of the message.
"If thine eye offend thee, cast it out..."

Beep, beep.

>>>
>>>You signed it "Len Over 21".
>>
>> Nope. It is NOT "signed."
>
>Yes, it is. But your name doesn't appear in that post.

"Signing" in a US document requires HANDWRITING.

Newsgroup posts are NOT signed.

>No, you referred to a Regulation as a Recommendation. That's a mistake, plain
>and simple. S25.5 is part of the Regulations. Recommendations are a different
>section.
>
>You can say that it's your OPINION that black is white, up is down, etc., but
>you'll still be mistaken.

Nope. No "mistake." A regulation is codified law. International
Telecommunications Union is a voluntary group of the world's
administrations in regard to telecommunications activity. There
is no international police force to enforce recommendations or
anything else written by the ITU. There is no "court" to try anyone
breaking statements written by ITU.

There is NO "international law" the same as national laws set by
nations' administrations or legislations.

>Why should I "like" opinions that are based on untruths?

You just don't like contrary opinions...so much so that you, like
typical PCTAs, feel so arrogant and smug in your self-
righteousness of your own opinion.

No problem on defining that. All can see it except for other
PCTAs.

>You don't like any opinion or fact that proves you wrong. You can't take
>strong opposition to your cherished mistakes.

No problem with me "taking" things. :-) Done that for a
lifetime...surrounded sometimes by smug, arrogant, single-
viewpoint self-righteous zealots who demand others obeying
their cherished opinions.

What seems to bother the smug, arrogant, single-viewpoint
inflexible self-righteous zealots of a minority group is a stronger
opposite-view response based on the larger reality of the world.
Minority groups are a minority and old-fashioned, inappropriate
regulations are still old-fashioned and inappropriate to the
majority.

You, James N2EY Miccolis, cherish and love the old-
fashioned ways and regulations, probably because you met
them long ago. Now you demand your personal achievements
be considered as good examples for others to emulate.

>> YOU are mistaken...we aren't discussing the "IYR."
>
>Just a typo. Do you never make typos?

I make typographical errors once in a while. Others, such as
yourself, make them too...and then bristle with mighty irritation
and hard responses when their proficiency is popped. :-)

>> Tsk, tsk, tsk...learn to LIVE with OPINIONS. :-)
>
>You sure have difficulty doing that. Practice what you preach.

I'm not a self-ordained clergyman like you, Reverend Jim. :-)

The FCC allows amateur radio beacons...not radio deacons.

>How? FCC still requires a code test for HF amateur licenses, specifically
>because S25.5 requires it. That's incorporation of S25.5 in US rules, regs,
>laws, whatever you want to call them.

Tsk, tsk, tsk. ITU-R S25.5 specifically says "receive by ear,
send by hand." The FCC violated that specific years ago on
making the US morse code test "send by hand" optional.

Violation, pure and simple.

>Guess what, Len - you are not a god of radio and aren't always correct in
>every-
>thing you write here, or elsewhere.

I don't pretend to be a "god of radio." Neither do I sit timidly on
the sidelines while some smug, arrogant, self-righteous control
freaks posture, preach, and patooey about their sanctimonious
sacraments.

>> I'm not a lawyer but I seem to be playing a construction worker
>> in here, chipping away at the concrete blockheadedness of
>> prissy pedanticsm you've molded yourself into. Too many
>> rocks in that morseman's concrete, doesn't have enough
>> strength to support magnificent morsemanship medallions.
>
>You're still not a lawyer, Len. And you're still mistaken.

I'm a retired (from regular hours) electronics engineer who first
operated on HF a half century ago...and not timid about arguing
for the elimination of morse code tests.

James N2EY Miccolis is a prissy pedant who demands obeyance
to his self-righteous opinions and dismisses anything contrary to
his sacred opinions as "mistaken" or "wrong."

>Where have I used the phrase "international law"? It's a treaty. Do you think
>the USA should violate that treaty?

The USA has already violated parts of the voted-in statements of
WARC and WRC resolutions.

>So what's your suggestion to the FCC? Violate the treaty?

That suggestion was already made years ago.

CHANGE ITU-R S25.5.

>Len, it's clear your whole purpose here is tossing insults and wasting time.
>With every post, you make it more clear that:
>
>No matter what job, educational level, employer, or
>government/military service that a radio amateur has, if said radio
>amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
>Anderson's insults, ridicule, name-calling, factual errors, ethnic
>slurs, excessive emoticons and general infantile behavior.

Poor baby. Someone dared step on the long train of your
mighty vestments this morning as you led divine worship
at the Church of St. Hiram?

>Your hobby is wasting time. Others' time. But not my time.

Noooo, Reverend Jim, you spend an inordinate amount of time
in making smug, arrogant, self-righteous opinions (of the ancient
league origin) and then stating that opinions opposite to yours
are "mistakes" or "errors."

Have you taken up evangelism, Reverend Jim? You are starting
up with small-scale fire and brimstone flicking. The old prissy
pedantic Sermons on the Antenna Mount were too gentle? :-)

"Arf, arf, arf" yipped the little doggie.

The United States of America "put spin" on ITU-R S25.5 in making the "send by hand" optional and unneccessary for years. ITU-R S25.5 is very specific, "receive by ear and send by hand."

"Taht" is what is written, little doggie.

"Adherence" was broken. Try a better glue mighty macho morse-man. Lock and load, prepare to embark for foreign service to fight for the rights of all mighty macho morsemen and obeyance to the letter of "international law."

Now get along, little doggie.

Oh, my, "spin!" Tsk, tsk, tsk.

The USA has "put spin" on the "send by hand" part of ITU-R S25.5 for years. Japan "put spin" on S25.5 entire for an even longer time.

ITU-R S25.5 is very specific on its "international law." ["law" according to the PCTA spin on what mighty macho morsemen think all should obey] "Receive by ear and send by hand" in ITU-R S25.5 is rather specific with no room to wiggle out.

That makes three large member nations of the ITU who have broken "international law" in regards to amateur radio. Tsk, tsk.

Incorrect. ARRL "tells what amateur radio is." Part 97, Title
47 Code of Federal Regulations, only codifies the regulations
of the Federal Communications Commission in regard to USA
amateur radio.

US amateur radio is all about working DX on HF with CW.

Try not to end a sentence with the word "is." That isn't
proficient English. You have demonstrated bad proficiency
at least twice in one message. Tsk, tsk, tsk.

Yep. I'm a winner today.

DICK and Alec Baldwin have apparently made a lasting relationship.

Not that Dave has noticed or would break his PCTA double standard to comment.

He's too busy tuning 6M.

Larry's been acting this way ever since you posted that you had an
XOM. He needs to go back to the Russian Personals and find another
Natasha.

Why should they be changing for the better? You've predicted here for
the past 8+ years that the sky was falling on amateur radio.

Maybe Kim could upgrade and get W5TI, but no, that's already taken.

Modern day reenactors enjoy jousting, and though if they were pitted
against actual middle age knights, they would become dog food. Is it
really necessary to to walk up and down an SCA event, blow trumpets,
and tell everyone there that they are not proficient and are merely
entry level?

Of course none would be insulted and heartily agree that they don't
have a clue.

Meanwhile, Western Union no longer uses the telegraph. The US Army
Signal Corps no longer uses the telegraph. The Union Pacific Railroad
no longer uses the telegraph.

That a few amateurs still enjoy it is wunnerful. And telling
newcomers that 5wpm isn't proficient will ensure that you bury the

code forever. Keep it light cause it ain't going anywhere.

I don't see that in Part 97. Could you direct me to the right spot?

> >Is that in Part 97? All of Title 34?
>
> You tell me where the term "Morse proficiency" appears in those documents.

It would be better if you told me. You after all, are the Amateur
Extra, and I the mere General.

I'll fall to my knees and worship your God if you can produce it.

> >The rules don't even define what Morse Code is, let alone what are
> >basic skills or proficiency.
>
> Because such definitions are so self-evident as to be unnecessary.

That Morse is obsolete is also self evident, re: Western Union, US
Army Signal Corps, US Coast Guard, Union Pacific Railroad.

I don't see any indication that you've come up with a way to process the
information but here goes:

Write to the REF and see if you can set up a sked. You may have to wait
a while for 6m to open to Europe. Your alternative is to move to
Europe.

Dig back in the thread a little, Brian. That's one of the points I
made--that we don't know the code proficiency of either ham. We don't
know that their maximum morse receiving speed is higher than .02 wpm. I
have an idea that it it. You seem to have made an assumption that it is
on the order of .02 wpm and then asked if that was "proficient". Such
comments just make you look like a dullard.

> > > I can make just as many arbitrary claims as you can, re: 5wpm not proficient.

That's completely untrue. I've never written anything to indicate
anything like it. It is likely another example of your poor (not
proficient) reading comprehension skills.

Amateur radio is not Western Union. Amateur radio is not the U.S. Army Signal Corps. Amateur radio is not the Union Pacific Railroad. The morse code is in wide use in amateur radio.

> That a few amateurs still enjoy it is wunnerful.

False premise. Not just a few radio amateurs use morse code. It is in widespread use by radio amateurs worldwide.

> And telling
> newcomers that 5wpm isn't proficient will ensure that you bury the
> code forever. Keep it light cause it ain't going anywhere.

What newcomer is foolish enough to believe that morse at five words per minute makes him proficient? Wouldn't want to hurt anyone's self-esteem would we?

"I sweated that stupid morse code for three whole weeks until I could copy five words per minute. Now they tell me I'm not proficient. I quit!"

> That Morse is obsolete is also self evident, re: Western Union, US
> Army Signal Corps, US Coast Guard, Union Pacific Railroad.

False premise again. Amateur radio isn't Western Union. Amateur radio isn't the U.S. Army Signal Corps. Amateur radio isn't the U.S. Coast Guard. Amateur radio isn't the Union Pacific Railroad. Morse is in widespread use by radio amateurs worldwide.

I think that's why it was written, Len. It made clear her meaning so
that no one would have difficulty reading it in context.

> Since many cannot take strong opposition to their self-righteous

> Beep, beep.

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

It is concise. It describes, in one simple paragraph, your typical actions quite accurately and wraps them all up in a neat little package. It presents quite a dilemma for you. You dont' seem to be able to counter it without doing the things which the profile outlines. The profile hasn't been used instead of rebuttal to your "strong opinion" but rather as a follow on after you've used insults, ridicule, name-calling, factual errors, ethnic slurs, excessive emoticons and/or infantile behavior. You generally do one or more of these things when it appears that YOU cannot take strong disagreement with your own self-righteous views.

You, aren't doing your "messenger" job when you resort to the things outlined in the profile. You are attacking others by means of the tactics N2EY's profile says you use. If you tire of seeing the profile, I can think of only one way for it to go away. That is for you to stop doing the things that it outlines.

Amateur radio isn't Citizens Band Radio Service.
Amateur radio isn't Mass Media Radio Service.
Amateur radio isn't Family Radio Service.
Amateur radio isn't Aviation Radio Service.
Amateur radio isn't Experimental Radio Service.
Amateur radio isn't Maritime Radio Services.
Amateur radio isn't the United States Navy.
Amateur radio isn't the United States Air Force.
Amateur radio isn't the United States Marine Corps.
Amateur radio isn't the Private Land Mobile Radio Service.
Amateur radio isn't professional anything. It is AMATEUR.

Amateur radio is all about working DX on HF with CW.

Amateur radio seems to be about emulating what was
done in the 1930s, complete with old standards and
practices, but with ready-built modern equipment that
no one knew about in the 1930s.

Beep, beep.

>
>You've stated an incorrect false premise.

Poor baby, can't understand either premises or promises or
much of anything else.

Title 47, Code of Federal Regulations, only states federal law
in regards to US amateur radio.

FCC does not support, encourage, or otherwise boost US
amateur radio. It only regulates US amateur radio. Tries to,
at any rate.

FCC is not a membership organization. It is, by law the only
US civil radio services' regulating agency.

FCC is not an academic institution. Its tests are not academic
tests, just tests to ascertain whether or not an examinee should
be granted legal permission to operate in a radio service.

American Radio Relay League is a membership organization.
It boosts, promotes, tries to encourage amateur radio in many
ways according to the wishes of its executives and board of
directors. ARRL defines US amateur radio.

>> US amateur radio is all about working DX on HF with CW.
>
>You've stated an incorrect false premise.

No again, Herr Robust. I've stated a de facto truism to nearly
every PCTA's self-righteous statements.

Maybe those two are just trying to "brown you off", Dave. Why bother with them?

It's obvious that the whole setup is semi-automated, with computers doing the
sending and receiving. Nothing wrong with that, of course, but in such a
situation there's no need for any code skill at either end of the circuit.

The ID thing is easily handled. At the very end of each dot or dash, the system
sends an ID in Morse at about 20 wpm. This would take about 3-5 seconds with
most callsigns, and would be ignored by the receiving setup.

73 de Jim, N2EY

I had no difficulty reading its content in context. Dee is a PCTA.
Dee echoes the propaganda mill at Newington. So do you.

>N2EY: "Besides, here's a simple, plain fact:
>

>It presents quite a dilemma for you.

Not at all. A bit of time-wasting, but that is all. :-)

You want it repeated some more? No problem.

>You dont' seem to be able to
>counter it without doing the things which the profile outlines.

What is to counter? You want only to assassinate someone's
character if their opinion differs from yours. So does Reverend
Jim in some kind of odd parable to the newingtonians. :-)

Miccolis tried for some originality. Heil gets zero points for originality.

>The
>profile hasn't been used instead of rebuttal to your "strong opinion"
>but rather as a follow on after you've used insults, ridicule,
>name-calling, factual errors, ethnic slurs, excessive emoticons and/or
>infantile behavior.

No problem. We all realize you can't address a subject without slamming someone's character who writes opposite to your views on the subject. "Character assassination" is the term. You aren't that good an assassin. Just an ass.

You've been outraged by lack of respect for morse code and rank in the US ARS ever since you tried to pull a snow job on the folks in here about "using CW for an orderwire on an RTTY radio circuit." You didn't realize there might be someone here who had worked professional comm before you did. You bluffed, got called, lost the pot. Ever since you've tried to deal from a marked deck.

>You generally do one or more of these things when
>it appears that YOU cannot take strong disagreement with your own
>self-righteous views.

:-) What "self-righteous views?"

Morse code is an obsolete mode of communications. It just isn't defunct yet. Every other radio service has either dropped it or never considered that mode to begin with. Yes, the amateur radio folks still use morse code and "ever other radio service" is definitely not amateur radio. Factual, not a personal opinion.

FCC does not demand morse code use by any US amateur, any band, any class license. FCC said 13 years ago in a public document that it doesn't consider a morse code test to be of value in that agency determining anyone for an amateur license. That's more facts, not my personal opinion.

Yet the FCC has test element 1 for morse code cognition because some die-hard zealots lobbied to keep it there. THEIR self-righteous opinions, not mine. My opinion is to remove the morse code test. It isn't needed, it isn't required by the only agency that grants US amateur radio licenses.

Is freedom from arbitrary laws and regulations "self-righteous?" You say so. Not many would agree with you. All you want, rather DEMAND is adherence to The LAW as it is. You don't want the law to change. With a code test removed, you would lose some of your status, rank, and privileges (real or imaginary) in the Ancient Radiotelegraphy Society. Just who is the "self-righteous" one now?

>You, aren't doing your "messenger" job when you resort to the things
>outlined in the profile. You are attacking others by means of the

>tactics N2EY's profile says you use. If you tire of seeing the profile,
>I can think of only one way for it to go away. That is for you to stop
>doing the things that it outlines.

Why should I want some individual's very biased pejorative
paragraph to "go away?" Here, I will repeat it -

>N2EY: "Besides, here's a simple, plain fact:
>
>No matter what job, educational level, employer, or
>government/military service that a radio amateur has, if said radio
>amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
>Anderson's insults, ridicule, name-calling, factual errors, ethnic
>slurs, excessive emoticons and general infantile behavior."

Use it as much as you want. I'll even copy it in other messages
to make sure that all can see it. No problem.

Gruss gott.

Ya gotta admit, Steve, your way of thinking is at *some* way, as opposed to Slim
who has
a real problem with thinking. The evidence shows up in his every post.
Unfortunatly in order
to avoid reading any of his I'd have to avoid most of those by everyone else too.

"Smiley" discounted. There's plenty of morse being used on VHF and UHF
by weak signal enthusiasts and satellite ops. Oh, I forgot--you're out
of the loop!

> >> That a few amateurs still enjoy it is wunnerful.

So it is your view that the thousands and thousands using morse code worldwide in amateur radio are not enjoying it? Is that about it? There's an amusing but moronic idea.

> >> And telling
> >> newcomers that 5wpm isn't proficient will ensure that you bury the

> mighty macho morsemen's self-esteem!

I'm not "Herr Robust" and I'm not challenging the self-esteem of anyone. I am ridiculing Brian's silly premise that 5 wpm beginners shouldn't be told that they aren't proficient in the use of morse because they'll get their feelings hurt.

> >"I sweated that stupid morse code for three whole weeks until I could

Poor old Leonard. Tsk, tsk tsk. I understood your premise and pointed
out that it is faulty.

> Title 47, Code of Federal Regulations, only states federal law
> in regards to US amateur radio.
>
> FCC does not support, encourage, or otherwise boost US
> amateur radio. It only regulates US amateur radio. Tries to,
> at any rate.

Doesn't support? It issues licenses. It provides regulations which
outlines what amateur radio is and which tells all who read those regs
what hams are permitted to do and what they are not permitted to do.

> FCC is not a membership organization. It is, by law the only
> US civil radio services' regulating agency.

I looked through what I'd written. There was no claim that the FCC was
a membership organization.

> FCC is not an academic institution. Its tests are not academic
> tests, just tests to ascertain whether or not an examinee should
> be granted legal permission to operate in a radio service.

I looked through what I'd written. There was no claim that the FCC is
an academic institution.

> American Radio Relay League is a membership organization.
> It boosts, promotes, tries to encourage amateur radio in many
> ways according to the wishes of its executives and board of
> directors. ARRL defines US amateur radio.

I looked through what I'd written. There was nothing about the ARRL at
all. The ARRL certainly does not define amateur radio.

>

Looks like you've had an accident in the comm center, old timer. Your Avery Labels persona tangled with LenOver70 and spilled a few non responses. Come to think of it, that's not necessarily a bad thing.

> Jim in some kind of odd parable to the newingtonians. :-)

Your character can't be assassinated if you actually do the things described in the profile. Oh baby, you actually do the things. That's what is to counter and that's what you can't do.

> Miccolis tried for some originality. Heil gets zero points for
> originality.

Since I'm not claiming originality and since I'm clearly quoting N2EY, the point you thought you had is meaningless.

> >The
> >profile hasn't been used instead of rebuttal to your "strong opinion"

> views on the subject. "Character assassination" is the term.
> You aren't that good an assassin. Just an ass.

When you comment to me, do you use terms descriptive of the German military? Have you used references to Nazis? Have you attempted to belittle my job? my foreign service postings? Have you written in response to my comment that I'd done Radio/TV news releases something about a rear echelon clerk job? Have you written similar things about the jobs of others posting here? Have you written things like, "HF Amateur radio is all about chasing DX on CW" when nobody has made a statement like that? Are those who disagree with you treated to "Tsk, tsk, tsk", "poor baby", "Pedantic Parson", "Reverend Jim" and the like? Then you have no character to assassinate. You actually do the things outlined in the N2EY profile. Your words are there. That the profile causes you discomfort doesn't bother me. In time, you may learn to live with the rotting albatross of the profile hanging around your neck.

> You've been outraged by lack of respect for morse code and rank
> in the US ARS ever since you tried to pull a snow job on the folks
> in here about "using CW for an orderwire on an RTTY radio circuit."

There you go again. I'm not outraged. I've not attempted ever to pull a snow job. You don't know amateur radio and you know even less about the Department of State. You've proven it several times.

> You didn't realize there might be someone here who had worked
> professional comm before you did. You bluffed, got called, lost
> the pot. Ever since you've tried to deal from a marked deck.

I don't care what you've done, Len. The fact that you were on the planet first doesn't get you any points. The fact that you worked in communications doing something other than what I did doesn't get you any points. You didn't "call" me on anything because you have nothing with which to "call". For you to pretend that you know more about the job that I did than I can only be called stupid.

> >You generally do one or more of these things when
> >it appears that YOU cannot take strong disagreement with your own
> >self-righteous views.
>
> :-) What "self-righteous views?"

Why, YOUR self-righteous views. I find your view on morse testing to be self-righteous. I find your views on a minimum age for amateur radio licensing to be self-righteous. I'm able to do the same thing you are doing: Finding the views of those with whom you disagree to be self-righteous.

> Morse code is an obsolete mode of communications. It just isn't
> defunct yet. Every other radio service has either dropped it or
> never considered that mode to begin with. Yes, the amateur radio
> folks still use morse code and "ever other radio service" is
> definitely not amateur radio. Factual, not a personal opinion.

Amplitude modulation and SSSC are then obsolete modes of communication. They just aren't defunct yet.

> FCC does not demand morse code use by any US amateur, any
> band, any class license. FCC said 13 years ago in a public
> document that it doesn't consider a morse code test to be of value
> in that agency determining anyone for an amateur license. That's
> more facts, not my personal opinion.

Yet the FCC still requires that one pass a 5 wpm morse test for HF access. You know and I know that this will eventually disappear. You're one of the few still attempting to make an issue of it.

> Yet the FCC has test element 1 for morse code cognition because
> some die-hard zealots lobbied to keep it there.

That can only be considered a stupid statement.

> THEIR self-
> righteous opinions, not mine. My opinion is to remove the morse
> code test. It isn't needed, it isn't required by the only agency that
> grants US amateur radio licenses.

There you have it. You have a different opinion which I can only refer to as self-righteous.

> Is freedom from arbitrary laws and regulations "self-righteous?"

No, but your deciding what is arbitrary is self-righteous. My opinion
differs from yours.

> You say so. Not many would agree with you.

Show your work.

> All you want, rather
> DEMAND is adherence to The LAW as it is.

Hell, the FCC DEMANDS adherance to the LAW as it is. Are you advocating
civil disobedience? Go for it.

> You don't want the
> law to change.

No, I don't. But I'm not silly enough to believe that it isn't going to
change. You know that too but you're an impatient type.

> With a code test removed, you would lose some of
> your status, rank, and privileges (real or imaginary) in the
> Ancient Radiotelegraphy Society.

I don't lose anything. I'm still proficient in the use of morse code;
will still use morse code and any other mode permitted by regs, which
choose to use. You'll likely still be on the sidelines.

> Just who is the "self-righteous" one now?

My money is on the guy who uses terms like, "Ancient Radiotelegraphy
Society". That guy is pretty self-righteous.

> >You, aren't doing your "messenger" job when you resort to the things

See, you can't help yourself. Your makeup forces you to live up to the profile. There's one step you could take to avoid fulfilling the description of your likely actions...but you can't bring yourself to take that step.

Doubtful. You still don't know if the record setters are proficient
with a demostrated "skill" of 0.02 wpm, but declare those with a
demonstrated skill of 5wpm as not proficient.

Then you confuse your record of entering a contest with with proof of
proficiency, but don't allow someone with 250 times the speed of a
world record to be considered proficient.

You're mixed up.

Best wishes, Brian

Amateur radio is not a reenactment of anything. Your analogy simply doesn't

work.

It is simply an honest statement of fact to say that a person whose Morse skills are limited to 5 wpm has entry-level skills and is not proficient at Morse code.

I don't know any reasonable person whose Morse skills are limited to 5 wpm who is offended by that description.

>Of course none would be insulted and heartily agree that they don't

So? Amateur radio isn't the Union Pacific Railroad.
>
>That a few amateurs still enjoy it is wunnerful.

More than "a few". Do you ever actually listen to the amateur bands, particularly the non-voice HF/MF amateur bands, Brian? Lots of radio amateurs using RADIOtelegraphy. Right now, today.

> And telling
>newcomers that 5wpm isn't proficient will ensure that you bury the
>code forever.

Nonsense. Telling folks with entry-level skills that they are 'proficient' is patronizing and insults their intelligent. It's a form of lying. I respect those folks too much to do that sort of thing.

> Keep it light cause it ain't going anywhere.
>
What "isn't going anywhere"?

>That Morse is obsolete is also self evident, re: Western Union, US
>Army Signal Corps, US Coast Guard, Union Pacific Railroad.

Nonsense.

But your statement shows us that it isn't just the all Morse code TESTING that
you want to eliminate, but all Morse code USE.

Do Western Union, the US Army Signal Corps or the UPRR use SSB? AM? Baudot
RTTY? Are those modes "obsolete"?

Or are you simply trying to "brown people off"?

Jim, N2EY

Telegraph operators are telegraph operators. Of all the telegraph
operators of yore, a few amateurs are still using it.

There will be fewer still, tomorrow. Be sure to tell every newcomer
that they aren't proficient.

And that's coming from someone who's done it! Whohooo!

No thanks, I'd prefer to work them in-band.

You obviously thought Argentina was a threat to the USA, or you would
have protested our aid to Britian, and lack of protection to another
treaty American State being attacked.

Definitely a PCTA double standard.

942. Atlanta Hamfest Yesterday

Newsgroup: rec.radio.amateur.policy
Date: 2003-03-16 13:41:40 UTC
From: ProBroadcaster <FM@fmradiodial87.net>
Message-ID: <b51v08sss0@pita.alt.net>
Source record: 63279

Drove down from Raleigh for the Atlanta Hamfest yesterday.
Am I missing something, or is our hobby taking a major shift?
Every imaginable piece of CB equipment for sale, plenty guys with
KF4 and KG4 call sign hats on but were talking about CB radio,
computer links, modified radios for CB, Famradio, MURS,
"opened up" business radios. Even saw a few people selling low
powered FM broadcast equipment, easy set up, no license required,
"broadcast" to your neighbors and friends. All sorts of high tech
communications gear, but where was just plain old ham radios?
Saw a small group gathering where two guys were screaming at
each other "you walk on me and bleed on me." Huh? What's
that all about? Saw one guy smoking a funny looking cigarette.
Another sipping from a paper bag. Ham Radio R.I.P.

Mike
Gen Mgr @ Raleigh FM (licensed) station.

>treaty American State being attacked.

The Falkland Islands had been continuously inhabited by Subjects of the
British Crown for over a century. With the exception of a company of Royal
Marines, they were unarmed. They were attacked in force by the Armed Forces of
Argentina and the Argentine flag raised over them.

That the Argentines disputed this claim to the islands is evdent, but to
take them by force was also contrary to the UN and OAS charters.

That particular "American State" was, in that case, the aggressor.
Britain repatriated the islands by force when the Argentines refused to
withraw.

>Steve, its time to put up or shut up. Your choice

OK, Your Lyingness. I choose "put up". Now, we will await your answer
that "put's up" the alleged post wherein you claim I said you can "think
yourself well".

Is Brain Burke going to "put up", or just keep on lying?

I expect he's going to keep on dodging the inevitible and keep on trying
to spin his way out of the corner he's backed himself into.

Take a hint from Lennie the Lame, Brain. Usually when he get's bcked into
corners he's stuck in, he "goes on vacation" or takes some othr "scheduled"
road trip with Mrs Lennie, only to reappear some weeks or months later.

>and the Lone Ranger can ride for help. Everybody in the newsgroup would be
>impressed.

If you're looking for an analogy to the Morse code test, the horseback riding thing is not a good analogy. Try this one:

Once upon a time, practically all motor vehicles had manual transmissions of one type or another. Learning to use a clutch and gear shift was a big part of learning to drive.

Today, most (I read an estimate of 80%) passenger cars, minivans and light trucks on the road have automatic transmissions. I don't know of a single US state or commonwealth that requires manual transmission skill testing for an ordinary driver's license.

It's a good idea for all drivers to have manual transmission driving skills. But should such skills be mandated by law?

The current Morse test is akin to requiring all prospective drivers be able to drive across an empty parking lot with a manual-transmission car in first gear, starting and stopping without stalling the engine.

There's no doubt at all, Brian. You're still plodding along, making the same mistakes. The fellows on 136 KHz were likely using computers to bring the signal above the noise. We don't know either fellow's top morse speed but can safely assume that it is well above .02 wpm and likely in excess of 5 wpm. As I've pointed out several times, w e d o n ' t k n o w i f t h e y a r e p r o f i c i e n t in the use of morse. Someone whose top speed is o n l y 5 wpm is not proficient in the use of morse.

> Then you confuse your record of entering a contest with with proof of
> proficiency, but don't allow someone with 250 times the speed of a
> world record to be considered proficient.

I'm not confused at all, Brian. The average man speaks at a rate of about 150 wpm. One would have to assume that the top ten contest scorers worldwide would have to be at least average speakers to beat the thousands of other entrants and the hundreds with similar equipment and antennas.

Your diddling about the world record on 136 KHz ignore the fact that the slow speed was of necessity and that the ops weren't even depending upon copy by ear. You'd also have us assume that .02 wpm is their top receiving speed. You're attempting a stretch and your arguments still sound absurd.

> You're mixed up.

Naw, that's still the mental fog in which you're operating. Maybe the fog will clear and you'll see the daylight.

So you'd like to compare apples and oranges. Most hams who use morse
code have never been commercial telegraphers. They're content to use
morse on the ham bands. They enjoy using it. The mode is popular.
Thousands use it daily.

> > > And telling

It has nothing to do with the FCC. If the FCC mandated testing at 13
wpm, those who could do only 5 wpm would still not be considered
proficient.

>
> Suit yourself.

You, like Len, assumed that I wrote of myself. I passed all the exams
they gave, Brian--all of the written exams; all of the morse exams. I
didn't quit. I didn't say, "I can't". I didn't say that I'd wait until
they changed the rules to suit me.

That isn't correct. Thousands and thousands of radio amateurs are using
morse daily. The mode is the second most popular on HF.

> There will be fewer still, tomorrow.

That hasn't been demonstrated.

> Be sure to tell every newcomer
> that they aren't proficient.

I'm sure they already know it.

I'm happy that you two found each other. You'd have likely had an
otherwise lonely existence. One writes a falsehood and the other tops
it.

That's what I did. I never strayed from my allocated band segment even
once. I'm curious though--why'd you ask if you had no intention of
following up?

How're you coming along with the answers to those questions about your T5 operation?

These are the number of unexpired FCC ARS
licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of March 15, 2003:

Novice - 35,124 (decrease of 14,205)
Tech - 251,221 (increase of 45,827)
Tech Plus - 70,742 (decrease of 58,118)
General - 140,285 (increase of 27,608)
Advanced - 83,911 (decrease of 15,871)
Extra - 103,590 (increase of 24,840)
Total - 684,873 (increase of 10,081)

Radio amateurs are radiotelegraph operators. The land wire telegraph in North
America used a different code (sometimes referred to as "American Morse") and a
different receive interface (sounder clicks vs. tone).

>

How many is "a few"? There are more US hams today than even a few years ago,
and far more than in the 80s, 70s, 60s, 50s, etc. If only 1 in 10 US hams today
uses Morse code on the air, that's more hams than there were in the US before
WW2.

>
Would you prefer we lie to them and patronize them, insulting their
intelligence?

When I was a 5 wpm beginner, if someone had told me I was "proficient", I'd
have thought they were either nuts or ignorant of what true Morse proficiency
is. Either way it would not have helped me.

Perhaps that's your goal.

>of the loop!

You are irrational. You are angry.

Advocacy of elimination of code testing does not require licensing.

There is not secrecy in US amateur radio. Such is not allowed
by US law on US amateur radio.

>So it is your view that the thousands and thousands using morse code
>worldwide in amateur radio are not enjoying it? Is that about it?
>There's an amusing but moronic idea.

You are a god of radio and "superior." You are irrational.
You are angry. You attempt character assassination.

There has been no poll done on how many enjoy morse
code.

Morse code is not a required mode in US amateur radio use.
All modes are optional to use in US amateur radio law.

>I'm not "Herr Robust" and I'm not challenging the self-esteem of anyone.

Your own self-esteem is most important. You are a radio god.
You are "superior." You are irrational.

Your virtual prussian prune uniform fits badly. Get a tailor.

>I am ridiculing Brian's silly premise that 5 wpm beginners shouldn't be

You have no authority to do much of anything except be an
amateur. At nearly everything. That includes snow jobs.

>Since I'm not claiming originality and since I'm clearly quoting N2EY,
>the point you thought you had is meaningless.

You cannot claim something you do not possess.

You are not original. You are an amateur.

>When you comment to me, do you use terms descriptive of the German
>military? Have you used references to Nazis? Have you attempted to
>belittle my job? my foreign service postings? Have you written in
>response to my comment that I'd done Radio/TV news releases something
>about a rear echelon clerk job? Have you written similar things about
>the jobs of others posting here? Have you written things like, "HF
>Amateur radio is all about chasing DX on CW" when nobody has made a
>statement like that? Are those who disagree with you treated to "Tsk,
>tsk, tsk", "poor baby", "Pedantic Parson", "Reverend Jim" and the like?
>Then you have no character to assassinate. You actually do the things
>outlined in the N2EY profile. Your words are there. That the profile
>causes you discomfort doesn't bother me. In time, you may learn to live
>with the rotting albatross of the profile hanging around your neck.

You are not an Ancient Mariner yet you are all at sea.

Your life preserver is the virtual dressing up as an order-giving
prussian prune complete with jackboots and twin lightning

bolts on the collar.

This is not a newsgroup about policies of entertainment
industry costumers, Actor's Studio, or role-playing games.

Try to remember where you are.

Get an Alzheimer's patient's bracelet to let others guide you
back to the subject.

>There you go again. I'm not outraged. I've not attempted ever to pull
>a snow job.

Of course you did. Five years ago. That nonsense about mode
changing on HF just for order-wire purposes.

Your bluffing banked on so very few people here having any
experience in commercial/military/government HF
communications. You got caught. Try to admit it.

>You don't know amateur radio and you know even less about
>the Department of State. You've proven it several times.

I know about amateur radio. Stop the "big lie" technique.

You cannot issue edicts of what others know. You don't
have the authority.

This isn't a newsgroup for State Department policy.

Try to stay focussed on the general supposed subject of
this newsgroup.

>I don't care what you've done, Len.

Everyone already knows that. You care only about the
"expertise" and "superiority" of Dave Heil.

>The fact that you were on the
>planet first doesn't get you any points.

It should. I've had more experience in radio than you and
before you in HF communications.

You don't like that. It blows away your attempts at snow
jobs.

>The fact that you worked in
>communications doing something other than what I did doesn't get you any
>points.

Oh, it does. I've pointed out the illogic of your original snow
job in public.

You can't bear to admit it.

>You didn't "call" me on anything because you have nothing with
>which to "call".

Yes I do. You were called. You tried more bluffing. You
got called again. You've folded but you won't leave the
table.

You have nothing but bluff left.

>For you to pretend that you know more about the job
>that I did than I can only be called stupid.

More bluff. HF communications is the same for all users.

US Department of State is not the Central Intelligence
Agency.

US Department of State is not US amateur radio.

>Why, YOUR self-righteous views. I find your view on morse testing to be
>self-righteous.

You must say that. Your amateur rank, status, privileges are
all related to morsemanship.

Take away your amateur rank, status, privilege you are not much.
You are an amateur.

>I find your views on a minimum age for amateur radio
>licensing to be self-righteous.

You want 4-year-olds to be licensed amateurs.

You want children to assume responsibility of adults.

You are immature.

>I'm able to do the same thing you are
>doing: Finding the views of those with whom you disagree to be
>self-righteous.

You are a self-perceived god.

Irrational.

>Amplitude modulation and SSSC are then obsolete modes of communication.
>They just aren't defunct yet.

Irrelevant to the subject of code testing.

Try to stay focussed on subjects.

>Yet the FCC still requires that one pass a 5 wpm morse test for HF
>access.

Only for amateur radio.

Professionals and military people are not required to be code
tested to work in HF.

>You know and I know that this will eventually disappear.

I am not a god. I cannot foretell the future. You claim to do
that. You are a god. You are irrational.

>You're one of the few still attempting to make an issue of it.

One of the many.

>That can only be considered a stupid statement.

Self-appointed gods make statements which are irrational.

>There you have it. You have a different opinion which I can only refer
>to as self-righteous.

You are still irrational.

>No, but your deciding what is arbitrary is self-righteous. My opinion
>differs from yours.

It must. You claim god-like powers and "superiority."

You are still irrational.

>Show your work.

On display in Ham Radio magazine for part of it.

$150 for a 3-disk CD from CQ or ARRL. Shipping extra.

>Hell, the FCC DEMANDS adherance to the LAW as it is.

I am not "Hell." You are "Heil."

All US laws may be changed.

The Constitution of the United States includes provisions for
changing it. It also includes its own dissolussion.

>Are you advocating civil disobedience? Go for it.

You are irrational. No one is advocating civil disobedience.

PCTAs demand changeless regulations on morse code.

PCTAs are not the law. PCTAs are not gods.

>No, I don't. But I'm not silly enough to believe that it isn't going to
>change. You know that too but you're an impatient type.

You are irrational. You are a radio god. You can foretell the
future. Nutcase.

>I don't lose anything. I'm still proficient in the use of morse code;
>will still use morse code and any other mode permitted by regs, which

>choose to use. You'll likely still be on the sidelines.

You are still irrational.

The major subject of the newsgroup is morse code testing.

There are no rules demanding licenses to participate.

You have no authority here. You are not a god. You are still
irrational.

>My money is on the guy who uses terms like, "Ancient Radiotelegraphy
>Society". That guy is pretty self-righteous.

PCTAs are self-defined as members of the Ancient Radiotelegraphy
Society, the ARS.

That is self-evident, not self-righteous.

PCTAs are self-righteous.

>See, you can't help yourself. Your makeup forces you to live up to the
>profile. There's one step you could take to avoid fulfilling the
>description of your likely actions...but you can't bring yourself to
>take that step.

You are irrational.

Advocacy of code test elimination does not require licensing.

Licenses are not required to discuss US government laws.

You are only an amateur.

>If you're looking for an analogy to the Morse code test, the horseback riding
>thing is not a good analogy. Try this one:

This is neither an equine interest nor automotive interest group.
Why do you persist in misdirection to thread lines far from
the intended newsgroup topics?

>It's a good idea for all drivers to have manual transmission driving skills.
>But should such skills be mandated by law?

This is not a newsgroup for discussion of automotive vehicle
laws.

>The current Morse test is akin to requiring all prospective drivers be able to
>drive across an empty parking lot with a manual-transmission car in first
gear,
>starting and stopping without stalling the engine.

Nonsense. Misdirection.

Your entire life interest seems "kin" to manual telegraphy.

There are NO vehicle driving test elements for US amateur radio
license examinations, any class, at VE sessions or required
by the FCC.

Try to stay focussed.

This is one example of how politics has taken over amatuer radio, now known as "Ham" radio. You must fit the traditional Ham conventions, have the "right attitude" (as said by lenover21), to be a "Ham".

From: "ProBroadcaster" FM@fmradiodial87.net
>Every imaginable piece of CB equipment for sale
Nothing wrong with that. Its still amateur radio. I have bought a CB troubleshooting manual to learn more about amateur radio - blasphemy.

>call sign hats on but were talking about CB radio,
Okay, call sign hats are weird.

>computer links, modified radios for CB, Famradio, MURS,
>"opened up" business radios.
Except for the specific services mentioned. Seems like it is in line with Ham radio. Also, modified radios for CB is fine. As long as they have the license, its legal. Where's YOUR Ham radio spirit, ProBroadcaster?

>Even saw a few people selling low
>powered FM broadcast equipment, easy set up, no license required,
>"broadcast" to your neighbors and friends
FM broadcast equip IS legal as far as I know.

>All sorts of high tech
>communications gear, but where was just plain old ham radios?

Hint. These are all radio activities. Sorry if it does not fit the Ham traditions.

Jim,

I think the horseback riding analogy is a good one ... however, since you
prefer the transmission one, I'll speak to that.

> Try this one:
>
> Once upon a time, practically all motor vehicles had manual transmissions
of
> one type or another. Learning to use a clutch and gear shift was a big
part of

> ordinary driver's license.

Neither do I ...

> It's a good idea for all drivers to have manual transmission driving
skills.

Why???

> But should such skills be mandated by law?

Of course not.

> The current Morse test is akin to requiring all prospective drivers be
able to
> drive across an empty parking lot with a manual-transmission car in first
gear,
> starting and stopping without stalling the engine.

Exactly ... such a test should not be mandated because it isn't necessary
and serves no legitimate regulatory purpose.

I'm glad you finally seem to agree :-)

I'm making mistakes?

The fellows on 136 KHz were likely using computers to
> bring the signal above the noise. We don't know either fellow's top
> morse speed but can safely assume that it is well above .02 wpm and
> likely in excess of 5 wpm.

Why can you assume that?

Because a world record was set they must be fast coders?

And you say I make mistakes.

As I've pointed out several times, w e
> d o n ' t k n o w i f t h e y a r e p r o f i c i e n t in
> the use of morse.

But somehow you can assume it is well in excess of 5wpm?

Someone whose top speed is o n l y 5 wpm is not
> proficient in the use of morse.

Especailly if they set world's records.

> > Then you confuse your record of entering a contest with with proof of

> sound absurd.

I assume nothing. They used CW; their speed was 0.02wpm. They set a
world's record.

Dear O.:

Well, thank you for all the unsolicited compliments, but I think you'll find that there's a gentleman named Jeff in New Jersey who would most likely not appreciate your using his call sign with my name attached to it!

>... I am Roll of Borg...No Hams are good enough to be assimilated!

Ah, that takes me back to the old days of Fidonet! Making fun of the Borg was ripping good fun then -- I just hope they have a sense of humor!

73 de Larry, K3LT
President, Vice-President, Secretary, Treasurer, entire Board of Directors and Entire membership of the Larry Roll Fan Club. If anyone else wants to join, fine by me, but I ain't payin' no steenking dues! Moreover, after over fifty years of holding all those offices all by myself, it will be YOUR turn to be in charge!

Are you trying to hypnotize me? I'm not irrational and I'm not angry.
It is obvious that you didn't know that morse is frequently used above
30 MHz. That puts you out of the loop.

> Advocacy of elimination of code testing does not require licensing.

Nobody asked you to become an advocate. If you must, go advocate
somewhere. You aren't hitting your intended audience here.

> There is not secrecy in US amateur radio. Such is not allowed
> by US law on US amateur radio.

Just because you don't know something doesn't mean that it has been kept
a secret. It just means that you don't know.

> >So it is your view that the thousands and thousands using morse code
> >worldwide in amateur radio are not enjoying it? Is that about it?
> >There's an amusing but moronic idea.
>
> You are a god of radio and "superior." You are irrational.
> You are angry. You attempt character assassination.
>
> There has been no poll done on how many enjoy morse
> code.

You're right. There has been no poll. How likely do you believe it to be that the thousands of radio amateurs using morse each day are not enjoying it? You'd have to be a fool to stake the ranch on that one.

> Morse code is not a required mode in US amateur radio use.
> All modes are optional to use in US amateur radio law.

You're drifting. We were discussing those who USE MORSE.

> >I'm not "Herr Robust" and I'm not challenging the self-esteem of anyone.
>
> Your own self-esteem is most important. You are a radio god.
> You are "superior." You are irrational.

Is this the part where I'm supposed to be getting sleepy?

> >their feelings hurt.
>
> Radio gods love ridiculing ordinary mortals. They are superior.
> They are also irrational.

I'm not going to tell someone whose maximum morse speed that he is proficient and I'm not going to tell Brian Burke that his moronic premise is brilliant.
>

I don't know any radio gods. I've never seen one, never spoken to one. I suspect they are superior but I don't know why they'd be irrational.

> >That's exactly right. I think you've finally gotten it. It is AMATEUR
> >and not professional. I am a radio amateur. You aren't a radio
> >amateur.
>
> I am a professional.

Good for you, Len! Now try for the next part of the sentence, "and amateur radio is not professional". Now you're getting it. Amateur radio isn't professional and you aren't a radio amateur. We're making progress!

> >So far, you and Mini-Len seem to be the only parties spouting this line.
>
> Radio gods still like character ridicule. They are superior.
> They are also irrational.

Maybe you can tell them when you meet them. I don't expect that to
happen until you've expired. How do you intend to get word back to us?

> >Don't let it get to you Foghorn. Hams use whatever mode they wish to.
> >You're still just a bystander.
>
> I am still a professional in radio and electronics.

...and you're still not a participant in amateur radio.

> Radio gods were never professional despite their past titles.

Gods don't get paid? Why would a god have a past title?

According to the WM7D.net callsign server there is only one "Epstein"
in the USA with the first or middle inital of "O" and that is KD5FJN
down Flint TX way. But since this posting came out of the Google
sewer, I doubt if the "real" Mr. Epstein is the source.

Yep. There are many interesting messages to read in these newsgroups, most from people who are a real pleasure to talk to. But, at the same time, there are messages which leave one wondering if the writer has the intelligence of a gecko. That message was the latter.

Time for Brian Burke to admit he's lying. However, like his mentor and documented pathological liar Lennie the Lame, he won't.

He has so bamboozled even himself that he can't tell the difference even in his OWN mistruths.

Witness his inability to seperate "permission" from "validity".

>Time for you to take a sabbatical.

To allow you to make these pronouncements unchallenged...?!?!

Heavens no!

But thanks for the laughs!

I'm waiting for the "radio professional" to spin the one that tell's us why he's double posting messages.

Another one of his "e mail errors", no doubt. Of course he will blame it on the software package that some friend gave him like he did before.

Personally, I just think he's an idiot.

> I'd like to stick with telegraph operators.

I'll bet you would. Lumping all telegraphers together might make your
shaky premise easier to construct.

> You're welcome to discuss apples and oranges with someone else, anyone
> else. But not with me.
>
> I don't have time for your stupid games.

Actually, the stupid games are your department and you seem to have
endless time for them. Thousands of hams worldwide use morse daily.
No one, save for you and Len, believes that those hams aren't enjoying
their use of morse.

> > Would 13wpm be considered proficient by you?

Thirteen words per minute is more proficient that five words per minute.
It is not as proficient as 20, 25, 30, 35 or 40 wpm.

> > > > > That Morse is obsolete is also self evident, re: Western Union, US

> > I'm sure they already know it.
>
> You'll be sure to tell them, Mr Smug.

I doubt that I will. If I encounter a couple of 5 wpm maximum types who
crow that they are proficient in the use of morse code, I'll pass it
along.

Your character can't have been assassinated. You actually do the things attributed to you.

> You have no authority to do much of anything except be an
> amateur. At nearly everything. That includes snow jobs.

Your statement rings hollow.

> >Since I'm not claiming originality and since I'm clearly quoting N2EY,
> >the point you thought you had is meaningless.
>
> You cannot claim something you do not possess.

Many people claim something they don't possess. You claim to engage only in civil debate about the code testing issue, for example.

> You are not original. You are an amateur.

I'm quite original but I didn't write N2EY's profile of your likely actions.

Yes, I'm a radio amateur. You aren't.

> >When you comment to me, do you use terms descriptive of the German

Don't you care to address whether or not you've done those things which
I described? I understand that they may cause you discomfort.

> Your life preserver is the virtual dressing up as an order-giving
> prussian prune complete with jackboots and twin lightning
> bolts on the collar.

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

There you go, Leonard, old boy.

> This is not a newsgroup about policies of entertainment
> industry costumers, Actor's Studio, or role-playing games.

I didn't write of any of those things. I wrote of things you do in this
newsgroup.

> Try to remember where you are.

I'm not confused.

> Get an Alzheimer's patient's bracelet to let others guide you
> back to the subject.

I wrote of things you do here and your response is about lightning
bolts, Prussian prune uniforms and jackboots.

> >There you go again. I'm not outraged. I've not attempted ever to pull
> >a snow job.
>
> Of course you did. Five years ago. That nonsense about mode

> changing on HF just for order-wire purposes.

No snow job there.

> Your bluffing banked on so very few people here having any
> experience in commercial/military/government HF
> communications. You got caught. Try to admit it.

I'd only admit it if it wasn't the case.

> >You don't know amateur radio and you know even less about
> >the Department of State. You've proven it several times.
>
> I know about amateur radio. Stop the "big lie" technique.

You've repeatedly shown that you have almost no feeling for what it is
that most radio amateurs do. You lift material from web sites and you
know a few radio amateurs. You yourself are not a radio amateur.

> You cannot issue edicts of what others know. You don't
> have the authority.

Edicts? I've written my opinion. Feel free to counter them with facts.

> This isn't a newsgroup for State Department policy.

Doesn't matter much. You don't know much about amateur radio or the
Department of State.

> Try to stay focussed on the general supposed subject of
> this newsgroup.

What was it again--Prussian uniforms? Lightning bolts? Jackboots?

> >I don't care what you've done, Len.
>
> Everyone already knows that. You care only about the
> "expertise" and "superiority" of Dave Heil.

Awwwwww, poor baby. Anyone who is able to use Google can compare your
posts to mine. Your problem is one of transference.

> >The fact that you were on the
> >planet first doesn't get you any points.
>
> It should. I've had more experience in radio than you and
> before you in HF communications.

I do hope you'll keep your own comments in mind then. I've been a radio
amateur for almost forty years. I have forty years more experience in
amateur radio than you.

> You don't like that. It blows away your attempts at snow
> jobs.

Why would that be so? You didn't work where I worked.

> >The fact that you worked in
> >communications doing something other than what I did doesn't get you any
> >points.
>
> Oh, it does. I've pointed out the illogic of your original snow
> job in public.

...and I've countered you in public. You weren't where I was, doing
what I was doing. You were no more a commo type for the U.S. Department
of State than you are a radio amateur. You aren't expert about either
thing.

> You can't bear to admit it.

What's to admit?

> >You didn't "call" me on anything because you have nothing with
> >which to "call".
>
> Yes I do. You were called. You tried more bluffing. You
> got called again. You've folded but you won't leave the
> table.

I'm sure you are quite the riverboat gambler in your mental home movies.
Do you ever play a radio amateur in any of those flicks?

> You have nothing but bluff left.

I have news for you. There is only one person posting here who knows
the facts. That person isn't you.

> >For you to pretend that you know more about the job
> >that I did than I can only be called stupid.
>
> More bluff. HF communications is the same for all users.

You're making that up. Why, you'd have to be a foot to make a statement
like that.

> US Department of State is not the Central Intelligence
> Agency.

...and B.F. Goodrich is not IBM.

> US Department of State is not US amateur radio.

I'm well aware of that. I've never confused the two.

> >Why, YOUR self-righteous views. I find your view on morse testing to be
> >self-righteous.
>
> You must say that. Your amateur rank, status, privileges are
> all related to morsemanship.

You couldn't be more wrong. I'm a multi-mode kind of guy, Leonard.
I operate using four modes on a regular basis. What modes do you use

when operating your amateur radio station, Leonard?

> Take away your amateur rank, status, privilege you are not much.

Why, you have no way of knowing that.

> You are an amateur.

Yes, a radio amateur. You are not.

> >I find your views on a minimum age for amateur radio
> >licensing to be self-righteous.
>
> You want 4-year-olds to be licensed amateurs.

If they can pass the exams, yes.

> You want children to assume responsibility of adults.

If they can pass the exams and wish to become radio amateurs, yes.

> You are immature.

No, to paraphrase Brian Burke, the FCC is an enabler. The commission
has never set a minimum age.

> >I'm able to do the same thing you are
> >doing: Finding the views of those with whom you disagree to be
> >self-righteous.
>

>
> Irrational.
>
> >Amplitude modulation and SSSC are then obsolete modes of communication.
> >They just aren't defunct yet.
>
> Irrelevant to the subject of code testing.

Oh, I think they're much more relevant as obsolete modes than Prussian
prunes, lightning bolt collars and jackboots.

> Try to stay focussed on subjects.
>
> >Yet the FCC still requires that one pass a 5 wpm morse test for HF
> >access.
>
> Only for amateur radio.

We're discussing amateur radio here. Try to stay focussed.

> Professionals and military people are not required to be code
> tested to work in HF.

We're discussing amateur radio here. Try to stay focussed.

> >You know and I know that this will eventually disappear.
>
> I am not a god. I cannot foretell the future. You claim to do
> that. You are a god. You are irrational.
>
> >You're one of the few still attempting to make an issue of it.
>
> One of the many.

Where are the many?

> >No, but your deciding what is arbitrary is self-righteous. My opinion
> >differs from yours.
>
> It must. You claim god-like powers and "superiority."

Let's see if I have this one straight: You have an opinion which you
believe to be correct. Anyone who holds a differing opinion is assuming
godlike powers, feelings of superiority and is irrational. Is that
about it?

> >Hell, the FCC DEMANDS adherance to the LAW as it is.
>
> I am not "Hell."

Don't sell yourself short.

> All US laws may be changed.

Until and unless a law is changed, it is demanded that we adhere to it.

> The Constitution of the United States includes provisions for
> changing it. It also includes its own dissolussion.

Until and unless a law is changed, it is demanded that we adhere to it.

> >Are you advocating civil disobedience? Go for it.
>
> You are irrational. No one is advocating civil disobedience.

Your statement (conveniently snipped in the Andersonesque manner) used
caps (in the usual Andersonesque manner) speaks to DEMANDS of adherance
to the LAW as it is, as if that was an onerous burden. Since government
demands adherance to any law as it is, what are we to make of your
statement?

> PCTAs demand changeless regulations on morse code.
>
> PCTAs are not the law. PCTAs are not gods.

Why then have you spent a goodly portion of your posting in telling me
that I am a god?

> >No, I don't. But I'm not silly enough to believe that it isn't going to
> >change. You know that too but you're an impatient type.
>

> You are irrational. You are a radio god. You can foretell the
> future. Nutcase.

that I am a god. I wish you'd make up your mind.

> >I don't lose anything. I'm still proficient in the use of morse code;
> >will still use morse code and any other mode permitted by regs, which
> >choose to use. You'll likely still be on the sidelines.
>
> You are still irrational.

You've spent years here telling us what is good for amateur radio.
You've done nothing in all that time toward becoming a radio amateur.
Who is irrational?

> The major subject of the newsgroup is morse code testing.

> There are no rules demanding licenses to participate.

You've participated. Now what?

> You have no authority here. You are not a god. You are still
> irrational.

But just a while ago I was a god. Then I wasn't a god. Then I was a
god. Now I'm not a god. Who is irrational?

> >My money is on the guy who uses terms like, "Ancient Radiotelegraphy
> >Society". That guy is pretty self-righteous.
>
> PCTAs are self-defined as members of the Ancient Radiotelegraphy
> Society, the ARS.

Self-defined? I haven't defined myself in that way. I've not seen a
single posting from any others here which would indicate that they
define themselves in that way. Who is irrational?

> >See, you can't help yourself. Your makeup forces you to live up to the
> >profile. There's one step you could take to avoid fulfilling the
> >description of your likely actions...but you can't bring yourself to
> >take that step.
>
> You are irrational.

Show your "You're a god. You are no god. You're a god. You are no god.
You're a god. You are no god. You're a god. You are no god." routine
to your psychologist wife.

> Advocacy of code test elimination does not require licensing.

You don't need a license to avoid fulfilling the N2EY profile.

> Licenses are not required to discuss US government laws.

You don't need a license to avoid fulfilling the N2EY profile.

> You are only an amateur.

Yes, a radio amateur. You are not.

I've never seen an apple press a telegraph key, nor an orange.
Perhaps you have. I suppose there could have been a fish a fish
telegrapher in a Disney film (Don Knotts comes to mind), but you'd
have to research that on your own.

In the meantime, we should stick with people telegraph operators.

That is simply not true. In my first statement I said that it was
enjoyed.

Go back. Do not collect $200.

I see. "Proficiency" is a moving target. It can be whatever you say
it is on any given day.

You need to define "proficient." At what use level does it become
proficient?

> > > > > > That Morse is obsolete is also self evident, re: Western Union, US

> It is now tomorrow. I've noticed no change.

Oh, no. I was wrong. There are more telegraphers today than there
were during the heyday of telegragh useage.

You can support that with facts at any time. Unless you think facts
will make you look stupid.

>
> Jim,
>
> I think the horseback riding analogy is a good one ...

Why?

Horses are not motor vehicles. No horse-riding license needed anywhere
I know. And except for a few areas (Lancaster County, some big cities
with mounted police), horses are almost unknown on American streets
and roads.

Manual transmission vehicles, on the other hand, are ubiquitous. Just
not as common as they once were.

The percentage of CW signals on the HF/MF ham bands is at least as
high, if not much higher, thans the percentage of manual transmission
cars on US roads. Much greater than the percentage of horses on the

road...

>
> Neither do I ...
>
I recall reading somewhere that the majority of new US-made cars had
automatic transmissions starting in the late 1950s.

> > It's a good idea for all drivers to have manual transmission driving
> > skills.
>
> Why???
>
Because it increases all drivers' opportunities and possibilities wrt
driving situations. For example, the choice of vehicle is greater. No
problems with "we have to take/buy X's car because Y can't drive
stick", etc. (Been there, done that!)

Manual transmission cars are simpler, cost less, use less fuel and
pollute less than their automatic-transmission equivalents.

Note that we're talking about something being a "a good idea" not
being mandated by law.

Do you think it's not a good idea for all drivers to have manual
transmission driving skills?

> > But should such skills be mandated by law?
>
> Of course not.

Well, that's one opinion.
>

> and serves no legitimate regulatory purpose.

There's no S25.5 for clutches, anyway.
>
> I'm glad you finally seem to agree :-)
>
You're inferring what I've neither stated nor implied. I haven't
stated any opinion other than "It's a good idea for all drivers to
have manual transmission driving skills."

My point is simply that the transmission analogy is a much better and
more relevant one than the horse analogy.

Sort of? Well, I guess there is "sort of" intelligence in almost any
living thing. However, I doubt the gecko is right up there on the
intelligence ladder. But, I'll admit I've never given one an intelligence
test, so you're probably right - I should give the gecko the benefit of
doubt when comparing them to others the way I did.

I agree! The code test is therefore not a proficiency test at all. Just an entry-level skill test.

But what does that have to do with lying to and patronizing folks with entry-level code skills?

> You respect only those "folks" who love and respect morse code.

Not at all. There are many people I respect regardless of their "love" and "respect" of Morse code. You're not one of them, Len.
>
>>What "isn't going anywhere"?
>
> Your analogy that morse code testing is like driving a manual
> transmission vehicle.

Why not? It's a good analogy. I should mention that Bill, K2UNK (whom I admire and respect even though we disagree on many things) seems to think it's a good analogy.

I'm not sure what Carl, WK3C, thinks of it, but in a recent post he seemed to indicate he thought it was a good analogy.
>
>>And that's a fact.
>

True, and in today's market, less than 10% of new cars are manual.

> > > It's a good idea for all drivers to have manual transmission driving
> > > skills.
> >
> > Why???
> >
> Because it increases all drivers' opportunities and possibilities wrt
> driving situations. For example, the choice of vehicle is greater.

That's a "personal choice." There's NO value to society and thus
the states abondoned any testing.

>No
> problems with "we have to take/buy X's car because Y can't drive
> stick", etc. (Been there, done that!)

That's a personal problem. All my kids learned to drive
manuals.

> Manual transmission cars are simpler, cost less, use less fuel and
> pollute less than their automatic-transmission equivalents.

The fuel efficiency of automatics is very close to that of a manual
gearbox these days. Pollution wise, unless you are factoring the
small mileage difference, the emissions shouldn't be any different.

> Note that we're talking about something being a "a good idea" not
> being mandated by law.

The ONLY reason manual transmissions are still be maded is
because there's a market for them that is big enough
to justify the continued availability.

> Do you think it's not a good idea for all drivers to have manual
> transmission driving skills?

Nope. I think it's a choice an individual makes. I could care
less that anyone else knows how to drive my cars.

> > > But should such skills be mandated by law?
> >
> > Of course not.
>
> Well, that's one opinion.

Would you rather manual transmission knowledge/skill be mandated?

> > > The current Morse test is akin to requiring all prospective drivers be

I agee also and have used this analogy myself many
times.

Cheers,
Bill K2UNK

He was probably saying it about a guy just like you--one who takes
several facts and puts them together in an effort to say that they prove
an entirely different thing. I didn't write that facts were stupid. I
wrote that you sound stupid.

Is it really that low, Bill? I'd guess more like 25%. However, if it's
10%, that simply reinforces my earlier statement that the percentage
of CW signals on the HF/MF ham bands is higher than the percentage of

manual transmission
cars on US roads. And much greater than the percentage of horses on
the road...

> > > > It's a good idea for all drivers to have manual transmission driving

>
> That's a "personal choice."

Usually true.

> There's NO value to society

I disagree! Less fuel used and less pollution are definitely a value
to society. So is the ability to choose the best driver from among
those available.

Example: Some friends go out for dinner in a stick-shift car. The
person who drove has a big meal and feels sleepy afterwards, but has
to drive home anyway because the others 'can't drive stick'. Of course
it's easy to say they should have taken another car in the first
place, but in real life such situations do arise.

> and thus the states abondoned any testing.

I disagree again!

I think the reasons the states we know of stopped being fussy about
what sort of vehicle was used for testing were:

1) it's a hassle to require a stick shift car for testing (in PA the
person being tested supplies the car).

2) lots of people wanted drivers licenses

3) the perceived benefits to society of having lots of people licensed
to drive were greater than the perceived benefits of having all
drivers pass a stick-shift test.
>
> > No
> > problems with "we have to take/buy X's car because Y can't drive
> > stick", etc. (Been there, done that!)
>
> That's a personal problem.

Not mine, because I drive all sorts of vehicles. Tested in a manual
transmission car, in fact, to avoid any possibility of the dreaded
"automatic transmission only" limitation on the license.

> All my kids learned to drive
> manuals.
>
Great!

> > Manual transmission cars are simpler, cost less, use less fuel and
> > pollute less than their automatic-transmission equivalents.
>
> The fuel efficiency of automatics is very close to that of a manual

But there is still an advantage. The percentage varies with the
vehicle, of course.

> Pollution wise, unless you are factoring the
> small mileage difference, the emissions shouldn't be any different.

But there is a difference. 10% less fuel burned in equivalent engines
means 10% less pollution.

Returning to radio for a moment, the spectrum and power efficiency of
CW is much better than any analog voice mode. "Takes up less of the
road", so to speak.
>

> > being mandated by law.
>
> The ONLY reason manual transmissions are still be maded is
> because there's a market for them that is big enough
> to justify the continued availability.

IOW, folks still want them. Even though some folks might call them
"luddites" or describe the manual transmission as "antique",
"obsolete", or "1930s technology".

Note how that market continues to exist even though there is no
stick-shift test nor mandatory stick-shift use requirement....

> > Do you think it's not a good idea for all drivers to have manual

>
> Nope.

Why not? Remember, we're talking about it being "a good idea" only,
NOT a mandated requirement.

> Would you rather manual transmission knowledge/skill be mandated?

I'm not sure. I am sure that manual-transmission skill is a good thing
to have, and should be a goal of practically all drivers.

There is a definite LACK of HUMOR among gods of radio.

Perhaps proficiency in morse code robs them of the ability
to observe advertising on television. Television is a Mass
Media Radio Service, not amateur radio. QED.

With all kind regards,

Leonard H. Anderson
retired (from regular hours) electronic engineer person

>I get out plenty. My statement is true.

Miccolis' statement only indicates he does not know many others.

>>>Your analogy simply doesn't work.
>>
>> Your reply to Brian's message doesn't work.
>>
>Sure it does. You just don't like it, because you cannot tolerate strong
>opposition to your cherished opinions.

Miccolis is NOT a "judge" of "what works" in the opinions of
others.

Miccolis is becoming irrational again.

>I have at least seven receivers in working condition capable of receiving
>non-Morse code signals on the HF amateur bands.

Irrelevant. See subject thread title.

>Do you have any that are capable of receiving Morse code on the HF amateur
>bands, Len? Brian?

Irrelevant. None of my receivers receive only "morse code."

My receivers receive only radio signals.

>> FCC does not demand proficiency in morse code. FCC requires
>> only a minimum passing score.
>
>I agree! The code test is therefore not a proficiency test at all. Just an
>entry-level skill test.

No. A passing score is simply a passing score.

The FCC tests prospective radio amateurs as part of their
radio regulating charter.

The FCC is not an academic or trade-school organization.

>But what does that have to do with lying to and patronizing folks with
>entry-level code skills?

Irrelevant again.

This is not about character assassination attempts by others,
notably David Heil.

FCC does not mandate morse code mode use by any US radio
amateur. All allocated modes are optional for use by any US
radio amateur.

>> You respect only those "folks" who love and respect morse code.
>
>Not at all. There are many people I respect regardless of their "love" and
>"respect" of Morse code. You're not one of them, Len.

Irrelevant again.

Miccolis is NOT a "judge" of "love or respect."

>> Your analogy that morse code testing is like driving a manual
>> transmission vehicle.
>
>Why not? It's a good analogy. I should mention that Bill, K2UNK (whom I
>admire
>and respect even though we disagree on many things) seems to think it's a
>good
>analogy.

This is NOT a newsgroup for policy on vehicle operation.

FCC does NOT require vehicle operation testing for any class
of US amateur radio license.

>> FCC does not demand proficiency in morse code. FCC requires
>> only a minimum passing score.
>
>I agree! The code test is therefore not a proficiency test at all. Just an
>entry-level skill test.

Incorrect. FCC has only one morse code cognition test element
for a US amateur radio license of General or Extra class.

The FCC is not an academic or trade-school organization. FCC
uses testing as part of its US civil radio regulation activity.

>Why do you keep repeating the obvious, Len?

Miccolis seems unaware of radio license testing true nature.

Miccolis tends toward irrationality.

>> You are irrational.
>
>How? What have I stated that is not true?

Yes. Your mistakes have been pointed out to you.

>>>>That Morse is obsolete is also self evident, re: Western Union, US
>>>>Army Signal Corps, US Coast Guard, Union Pacific Railroad.
>>>
>>>Nonsense.
>>
>> Not "nonsense." Fact.
>
>No, it's nonsense. Those organizations have nothing to do with amateur radio.

All of those organizations USE RADIO.

Operation of vehicles or horseback riding has NOTHING to do
with RADIO.

Try to stay close to focus.

>
>Are you trying to hypnotize me? I'm not irrational and I'm not angry.
>It is obvious that you didn't know that morse is frequently used above
>30 MHz. That puts you out of the loop.

Heil is both irrational and angry.

"Morse" is NOT "frequently used above 30 MHz."

Heil's "loop" is only his own irrationality.

>> Advocacy of elimination of code testing does not require licensing.
>

>Nobody asked you to become an advocate. If you must, go advocate
>somewhere. You aren't hitting your intended audience here.

Heil is irrational, angry, and now frustrated.

Heil is NOT an "authority" on any participation permission.

>> There is not secrecy in US amateur radio. Such is not allowed
>> by US law on US amateur radio.
>
>Just because you don't know something doesn't mean that it has been kept
>a secret. It just means that you don't know.

US radio amateurs are forbidden by law to use means of obscuring
communications.

Heil has now demonstrated irrationality, anger, frustration AND
ignorance of law.

>You're right. There has been no poll. How likely do you believe it to
>be that the thousands of radio amateurs using morse each day are not
>enjoying it? You'd have to be a fool to stake the ranch on that one.

This is not a newsgroup for real estate ownership matters or
western living.

There is NO poll on "enjoyment of morse."

>> Morse code is not a required mode in US amateur radio use.
>> All modes are optional to use in US amateur radio law.
>
>You're drifting. We were discussing those who USE MORSE.

There is NO discussion. Heil is irrational.

There has been NO poll on "enjoyment of morse (code)."

>Is this the part where I'm supposed to be getting sleepy?

Irrational people like Heil cannot focus on the subject.

Note subject thread title: "Extra-Lite Status."

>[this space reserved for the N2EY profile of Leonard H. Anderson]

Heil is still irrational AND lacks orginality.

Heil only wants to engage in character assassination.

>I'm not going to tell someone whose maximum morse speed that he is
>proficient and I'm not going to tell Brian Burke that his moronic
>premise is brilliant.

Heil now tries character assassination on Brian Burke.

Brian Burke is NOT the subject of this thread.

Heil thinks that the subject is character assassination.

Heil is still irrational.

>I don't know any radio gods. I've never seen one, never spoken to one.
>I suspect they are superior but I don't know why they'd be irrational.

More irrationality.

>> I am a professional.
>
>Good for you, Len! Now try for the next part of the sentence, "and
>amateur radio is not professional". Now you're getting it. Amateur
>radio isn't professional and you aren't a radio amateur.

Heil is both an amateur AND irrational.

I am a professional in radio-electronics. I have been such for
over half a century. I am licensed by the US government in
radio operation.

>Maybe you can tell them when you meet them. I don't expect that to
>happen until you've expired. How do you intend to get word back to us?

Heil is still irrational. Heil is still into character assassination
with wishes for one to "expire."

>> I am still a professional in radio and electronics.
>
>...and you're still not a participant in amateur radio.

Heil remains irrational.

There is NO requirement to be licensed to discuss US law on
licensing.

>> Radio gods were never professional despite their past titles.
>
>Gods don't get paid? Why would a god have a past title?

Heil's statements of "past work" indicate he was an amateur.

>with mounted police), horses are almost unknown on American streets
>and roads.
>
>Manual transmission vehicles, on the other hand, are ubiquitous. Just
>not as common as they once were.

This is NOT a vehicle operator's newsgroup.

There is NO requirement to demonstrate vehicle or equine
proficiency for a US amateur radio license.

"Ubiquitous" is defined in dictionaries as "seemingly present
everywhere at the same time." Any examination/observation
of vehicles on the roads of the USA will demonstrate that the
word "ubiquitous" does NOT apply to your statement.

>The percentage of CW signals on the HF/MF ham bands is at least as
>high, if not much higher, thans the percentage of manual transmission
>cars on US roads. Much greater than the percentage of horses on the
>road...

The presence or absence of "CW signals" on "ham bands" has
NOTHING to do with the kinds of vehicles on US roads.

Pluralizing the word "than" is INCORRECT English useage.

>I recall reading somewhere that the majority of new US-made cars had
>automatic transmissions starting in the late 1950s.

Irrelevant to an amateur RADIO newsgroup.

Try to stay focussed.

>Because it increases all drivers' opportunities and possibilities wrt
>driving situations. For example, the choice of vehicle is greater. No
>problems with "we have to take/buy X's car because Y can't drive
>stick", etc. (Been there, done that!)

Irrelevant to an amateur RADIO newsgroup.

Go to some automotive-interest newsgroup.

>Do you think it's not a good idea for all drivers to have manual
>transmission driving skills?

You are becoming irrational. There is NO requirement for
motor vehicle operation skills in US amateur radio.

>> Exactly ... such a test should not be mandated because it isn't necessary
>> and serves no legitimate regulatory purpose.
>
>There's no S25.5 for clutches, anyway.

The International Telecommunications Union does NOT make
regulations or recommendations for motor vehicle operation.

You've become irrational.

>You're inferring what I've neither stated nor implied. I haven't
>stated any opinion other than "It's a good idea for all drivers to
>have manual transmission driving skills."

Vehicle operation is NOT a requirement for any US radio
amateur, any class.

>My point is simply that the transmission analogy is a much better and
>more relevant one than the horse analogy.

This newsgroup is NOT involved with automotive or equine
matters.

Try to stay focussed.

You have not.

Go back. Do not collect $200. Read the definition
> of the word. We'll discuss it when you've digested it.

I have.

Webster's does not address Morse Code proficiency.

Title 47, Part 97 does not address Morse Code proficiency.

You do not define Morse Code proficiency, but you're here to tell
others they aren't proficient.

I'd call that "smug."

> > You can support that with facts at any time. Unless you think facts
> > will make you look stupid.
>
> The same would go for your statements. I haven't seen any numbers from
> you. Where are they?

You need to define proficiency at Morse Code. You need to state the
number that you think (or "feel") is the point of proficiency.

You have not done so. You have only provided a moving target.

Time to get real, Dave. Define Morse proficiency.

Ahhhhhh! But LENNIE! YOU are the LYING PUTZ who has stated his loving
spouse was so skilled in psychology and psychiatric disciplines!

So what's the truth...?!?!

Or should the question be "What's the truth THIS week?"

>Subject is CODE TEST ELIMINATION, not your attempts at
> character assassination.

This from the guy with the sightblack around his orbits from having
sighted-in more than one assassination target of his own!

Whoooooie!

>Try to stay somewhat close to the subject.

He's right on subject here, Your Lyingness. Lennie and his Lies.
Anderson and his Antagonisms...The Putz and his...Well, we won't go there....

>You are still irrational. Subject is CODE TEST ELIMINATION,
> not Heil's attempts at character assassination.

Hmmmmmmmmm.......Lennie spends YEARS posting hateful bile and
denigrations to a newsgroup related to a radio service in which he is neither
licensed nor experienced, then calls someone who IS "irrational".

THAT makes sense.

>I am a radio-electronics PROFESSIONAL.

Uh huh...One who can't send e-mail correctly. Reeeeeeeeal professional.

>You are also irrational. Get mental help.

You're a liar and a creep. You are BEYOND help.

Steve, K4YZ

1019. How stupid is K1MAN?

Newsgroup: rec.radio.amateur.policy
Date: 2003-03-18 22:48:14 UTC
From: Chuck O'Neal <coneal@ultranet.com>
Message-ID: <OmNda.133905$3D1.9714@sccrnsc01>
Source record: 63156
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Guess what folks...it appears that the Belgrade bastard (read Webster's
for a definition), as he is affectionately known as here in the NE, has
again
screwed up. He states in his current broadcasts that the FCC hasn't
published the 3 page letter to him which likely outlines previously reported
serious violations of FCC rules and regulations by K1MAN. Well, if one is
even slightly observant, you will see that the FCC logs on the ARRL website
are behind by a few weeks. I suggest that we wait and see if this letter is
published on the next cycle. For K1MAN's previous rules violations see:
http://www.arrl.org/news/enforcement_logs/
for Feb, 9 2002

K1MAN claims in his current broadcast that the FCC will not publish it.
HA!!!

When they do publish it, consider this in determining K1MAN's credibility
with his
whining's, threats, conspiracy theories, and other BS in the future.

Check this site out in the next week or two.
http://www.arrl.org/news/enforcement_logs/

Sure it applies. Pass an 18-wheeler lately? A dumptruck or military
vehicle?

>The presence or absence of "CW signals" on "ham bands" has
> NOTHING to do with the kinds of vehicles on US roads.
>
> Pluralizing the word "than" is INCORRECT English useage.

Lacking any valid rebuttal to the comments made, Lennie tries to hide a
veil of authortarianism as an English teacher.

>>I recall reading somewhere that the majority of new US-made cars had
>>automatic transmissions starting in the late 1950s.
>
> Irrelevant to an amateur RADIO newsgroup.
>
> Try to stay focussed.

Of course we KNOW that Lennie Anderscum NEVER deviates from discussing
Amateur Radio topics in this Amateur Radio
newsgroup...Uh-huh...riiiiiiiiight......

> Go to some automotive-interest newsgroup.

Lennie, contrary to your own self-determined rules, and as YOU have
pointed out in OTHER posts, this is NOT a moderated forum.

And even if it were (and ESPECIALLY if it were...) your lack of licensure and experience in Amateur Radio matters would preclude you from being a moderator. One with no practical experience in a subject can hardly sit in judgement of the matter discussed.

>You are becoming irrational. There is NO requirement for
> motor vehicle operation skills in US amateur radio.

What's even MORE irrational (and immensely humorous) is that you keep trying to argue as irrational that which is only an analogy.

Whew.

>Try to stay focussed.

Try to spell "focused" correctly, Mr English Teacher.

From Lenover21:
> The presence or absence of "CW signals" on "ham bands" has
> NOTHING to do with the kinds of vehicles on US roads.

Len, N2EY was using an analogy. By giving an example of (manual transmission and automobile operation), and relating it to (Morse code and amateur radio operation), he clarified the role of Morse code testing.

Below, N2EY further explains this analogy:
>>Because it increases all drivers' opportunities and possibilities wrt
>>driving situations. For example, the choice of vehicle is greater. No
>>problems with "we have to take/buy X's car because Y can't drive
>>stick", etc. (Been there, done that!)

From Lenover21:
>Go to some automotive-interest newsgroup.

N2EY did not extensively talk about automobiles - just enough to give an analogy.

N2EY says manual transmission is used in some cars - it is useful to know, but should not be part of the license test. By analogy, Morse may be useful for some Hams to learn, but there is no need to test for it.

Whether <Morse> code is useful is debatable. I feel <Morse> code is not useful and possibly harms to the hobby (and one's "state") more than there are benefits. I feel that the only reason <Morse> code is used is that Hams insist on using it. Non-testing seems like a reasonable compromise (yes, its still a compromise) to accept. As long as it does not affect me, I have no problem with that. There are enough people that will learn it and <Morse> code skill can be useful for them. I would elect not to learn it.

One more time,

A. K1MAN has been getting "correspondence" from the
Commission since the 1980s.

B. If K1MAN is taken off the air, W1AW will follow, immediately.

C. K1MAN has a well documented case against the FCC. The
commission will do anything to avoid metting K1MAN in a
federal courtroom.

D. If you don't understand A, B, C above, refer back to A,
then B, then C. Repeat as necessary.

Your reply means nothing since you have failed the first test of credibility
>> No identity.
You are a chicken shit. Reply if you have the testicular fortitude to use
your real name.

A) K1MAN, the NAL queen, has failed to pay fines, a FELONY!!!
"Correspondence"
yeah, right!!! Perhaps he will be in the cell next to yours.

B) W1AW is not anything like K1MAN. The other day I heard the control op of
W1AW
ask if the freq was in use before airing their bulletin. It was. They
waited. K1boy doesn't
do that because he is selfish and has yet to understand the rules. W1AW has
less than one
hour of weekly HF voice bulletins. K1MAN spews forth over 100 times that
amount in useless,
sickening, drivel while trying to earn a meager living at it, also a
FELONY!!! Can you
say "pecuniary interest"? And he doesn't care about any amateur using the
frequency when
he starts his jamming QRMcasts.

C) BULLSHIT. K1MAN fears the day that he, a fake and wannabe lawyer, faces
a
real one, in a real court. Just like Saddam H, he is another bully, but
exists as a radio terrorist.
(If you think about it on a far smaller scale, the parallels are amazing!!!)
Glen is a pathetic old MAN, a loud mouth bully with a 50 year old
transmitter, tape
loops, Radio Shack timers, and living on the edge of poverty....with nothing
to offer
than his fantasy world view of conspiracy. Just like those other wanna be
shortwave
kooks....Hey glen, get the idea? Get off the ham bands with your
commercialism and peddle
it elsewhere. The ham bands are for REAL hams, not wannabe broadcasters.
Call WBCQ,
perhaps they will air your crap, but I suspect you can't afford it.

D) Read the above again, and again, and again...

A Story with a Happy Ending...

Once upon a time there was this guy (let's call him Joe Ham) in a public bathroom at the park. He was sitting on the toilet relieving himself, when suddenly, a raving lunatic threw open the door without even bothering to knock, and the lunatic began cry like a little girl because Joe Ham was using HIS toilet. Yes, HIS toilet.

"Waah, you're using my toilet," the deranged Man whined, like a child.

Joe Ham was very startled, and a little angry, so he said, "It's not YOUR toilet, ya friggin' moron, now close the door and get lost ya loser!"

But the Man didn't leave... "It is too mine," the Man whined, "it's mine, it is too mine! It's a violation of sections 88 and 73 for you to even be in here right now! I use this stall at 8, 12, 4, 8, 12, 2 and 4 every day! You're an alleged criminal and I'm writing an alleged letter to an alleged someone who allegedly cares!

Seeing the tiny tears in the deranged old man's eyes, and beginning to feel sorry for the pathetic jack ass, Joe Ham said, "Now look MAN! I'm using this public toilet right now, OK? All you have to do is wait your turn. I won't be long, I promise, and then you can spend 12 hours in here if you want to."

But the Man wasn't satisfied, so he obtained Joe Ham's email address and he started sending Joe Ham an endless bunch of crazy garbage about s tuff Joe Ham didn't even give one teensy f*#^ about.

Then the Man stood in a corner of the park and started yelling at every one who passed by, that Joe Ham and all his friends were criminals; that they stole his stall; and that EVERYONE should know and WOULD know if they bothered to read his web page, that the stall they dared to use was RESERVED for him because he PUBLISHED A SCHEDULE!

So all the friends got together and called the
public works office because the Man was o
bviously crazier than a shite house rat. And the Park
Ranger who reads the reports said, "Yeah
we know this fruit. He's practically homeless,
but he thinks he's King of the park. We call him
Boo-Hoo. He's a known pest, just ignore him."

But, after enough people complained to the Ranger
that the Man was crashing stall doors on a regular
basis, the Ranger's office sent old Boo-Hoo a letter.
It was 3 pages long!

They said, "Man, we have evidence you've been
crashing into certain stalls uninvited. Why do you
think YOU own those stalls? YOU don't own t
hose stalls, they're PUBLIC stalls, and EVERYONE
with a park pass can use them. They're
first-come-first served-stalls, you silly wabbit, a
nd if you can't get that through your wittle numb-skull
we're gonna have to lock you out of the park, and
you won't be able to play there at all!"

But the Man wasn't satisfied (possibly because his
tiny brain didn't understand the concept of sharing)
so he tried to reply to the Ranger's letter using
certified mail, because in another part of his tiny
brain he fancied himself smarter than a Philadelphia
lawyer.

He didn't realize the Park Ranger's were much too
busy to care about returning certified mail cards,
or that they got about 50,000 pieces of mail a day,
delivered to a really big mail room, and in fact no
one at the park office had any time to deal with
silly crap like signing certified mail receipts from
crazy stall-crashers, because much more important
things were happening in the park just then.

Anyhow, to make a really long story a little shorter...

One day, the Park Rangers finally told old Boo-Hoo
that he could use the park no more...

And old Boo-Hoo, the crazy stall-crasher, took
them to court (again) and he lost (again) and he
became so frustrated, angry, depressed, and insane
from his complete failure to intimidate people, and
his inability to crash anyone's stall anymore, that
he took a slow boat to Bougainville and attempted
to start a new business selling shrunken heads to
cannibals on the beach.

Word has it he was delicious.

And all the people who used the park didn't miss
him one bit and they all lived happily ever after.

I've done so.

> You need to state the
> number that you think (or "feel") is the point of proficiency.

No, I don't feel any need at all to do so. I think you mean that Brian Burke needs me to do so. That'll likely happen when you provide some numbers about all those "telegraphers of yore" vice those using the mode today.

> You have not done so. You have only provided a moving target.

I've not given you a target at all. I've offered that someone who can handle 35 wpm is more proficient than someone who can handle 13 wpm.

> Time to get real, Dave. Define Morse proficiency.

Not again. Do at least some of the work yourself, Brian.

You're such a card, Len. Have you made up your mind yet?

> My wife is not a psychologist. She has a Masters Degree in
> Education, another Masters in Social Work, both from the
> University of Illinois.

From Google, you wrote on January 28:

"For "credentials" in psychology, I can call on my own
consultant, my wife, who has two Masters degrees (both
from University of Illinois) with one of those being in Social
Work. She was a licensed private counselor in the states
of Illinois and Washington for a number of years."

So we are now to understand that neither she nor you have any
credentials in psychology despite what you wrote earlier. Glad we
cleared that up.

> >> Advocacy of code test elimination does not require licensing.
> >
> >You don't need a license to avoid fulfilling the N2EY profile.
>
> Subject is CODE TEST ELIMINATION, not your attempts at
> character assassination.
>
> Try to stay somewhat close to the subject.

How far back does one need go in this thread to find an example of you discussing code test elimination? How far back does one need to in order to find examples of your writing which fit the N2EY profile?

> >> Licenses are not required to discuss US government laws.
> >
> >You don't need a license to avoid fulfilling the N2EY profile.
>
> You are still irrational. Subject is CODE TEST ELIMINATION,
> not Heil's attempts at character assassination.

I gave you a chance to respond and to defend yourself against what you say is character assassination. I brought up a number of things which you've done here in this newsgroup and asked if you've done those things. The list was quite specific and it touches upon just a few of the instances I could come up with. Instead of responding to those items, you snipped the entire paragraph and chose to ignore it.

I wrote

"When you comment to me, do you use terms descriptive of the German military? Have you used references to Nazis? Have you attempted to belittle my job? my foreign service postings? Have you written in response to my comment that I'd done Radio/TV news releases something about a rear echelon clerk job? Have you written similar things about the jobs of others posting here? Have you written things like, "HF Amateur radio is all about chasing DX on CW" when nobody has made a statement like that? Are those who disagree with you treated to "Tsk, tsk, tsk", "poor baby", "Pedantic Parson", "Reverend Jim" and the like?"

You can compare the list above to the N2EY profile below.

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or government/military service that a radio amateur has, if said radio amateur opposes Mr. Anderson's views, he/she will be the target of Mr. Anderson's insults, ridicule, name-calling, factual errors, ethnic slurs, excessive emoticons and general infantile behavior."

Now perhaps you can tell us how you believe your character to have been assassinated. I'll be happy to help you by providing more examples of your words which I believe fit the profile.

> >> You are only an amateur.
> >
> >Yes, a radio amateur. You are not.
>
> I am a radio-electronics PROFESSIONAL. You are not a
> professional. You are an amateur in radio.

Sorry old boy, Despite my own professional background in communications,
this newsgroup isn't about professional radio and electronics. This one
deals with amateur radio. I'm a radio amateur.
You're still a bystander.

Dave K8MN

>From Lenover21:
>>Go to some automotive-interest newsgroup.
>
>N2EY did not extensively talk about automobiles - just enough to give an >analogy.

Miccolis still acts irrational when imagining analogies.

>N2EY says manual transmission is used in some cars - it is useful to know, but >should not be part of the license test. By analogy, Morse may be useful for >some Hams to learn, but there is no need to test for it.

The FCC does not consider a morse code test useful for them
to determine if any US amateur radio applicant should be
granted a license.

Miccolis took a morse code test and passed. Ergo, to Miccolis,
a morse code test is "useful." It is not. Miccolis wants to halt
change. Change would take away some of his status.

>Whether <Morse> code is useful is debatable. I feel <Morse> code is not useful >and possibly harms to the hobby (and one's "state") more than there are >benefits. I feel that the only reason <Morse> code is used is that Hams insist >on using it. Non-testing seems like a reasonable compromise (yes, its still a >compromise) to accept. As long as it does not affect me, I have no problem

with
>that. There are enough people that will learn it and <Morse> code skill can be
>useful for them. I would elect not to learn it.

I do not elect to take any morse code test. Morse code testing
is obsolete. Morse code testing is not useful to the agency
granting US amateur radio licenses.

Miccolis insists on having a morse code test. Miccolis took a
morse code test once and passed it. Miccolis is not a role
model for the future. Miccolis is self-righteous and uncaring of
the future. At times Miccolis appears irrational.

Nope. I'm still not irrational or angry. See if you can get your money
back from that hypnotism correspondence course.

> "Morse" is NOT "frequently used above 30 MHz."

We'll put this down as yet another thing about which you haven't an inkling. You strike me as the kind of guy who is a bit foggy about 6 or 2m band openings.

> Heil's "loop" is only his own irrationality.

You mean that irrationality I exhibit about working all those CW stations on VHF?

> >> Advocacy of elimination of code testing does not require licensing.
> >

Nope. I'm not sleepy yet and I still don't feel angry, irrational or frustrated. Did they give you a pendulum to swing?

> >> There is not secrecy in US amateur radio. Such is not allowed
> >> by US law on US amateur radio.
> >
> >Just because you don't know something doesn't mean that it has been kept
> >a secret. It just means that you don't know.

You seem to be the only guy who believes that radio amateurs are obscuring communications. I wrote that just because you, Leonard H. Anderson, doesn't know something, doesn't mean that it has been kept a secret.

> Heil has now demonstrated irrationality, anger, frustration AND
> ignorance of law.

Only if we accept your introduction of the false premise that I was writing of radio amateurs obscuring communications. I don't accept that.

> >You're right. There has been no poll. How likely do you believe it to

> western living.
>
> There is NO poll on "enjoyment of morse."

I've already agreed that there has been no poll. I also pointed out how foolish you'd be to believe that there are those using morse on the amateur bands who do not enjoy it.

>
> >> Morse code is not a required mode in US amateur radio use.
> >> All modes are optional to use in US amateur radio law.
> >
> >You're drifting. We were discussing those who USE MORSE.
>
> There is NO discussion. Heil is irrational.

Oh--so you think none of this is real, huh? Well, kindly old gent,
that's precisely what was being discussed.

> There has been NO poll on "enjoyment of morse (code)."

You just can't take agreement for an answer, can you?

> >Is this the part where I'm supposed to be getting sleepy?
>
> Irrational people like Heil cannot focus on the subject.

> Note subject thread title: "Extra-Lite Status."

You might want to check back just a few teensy messages in the thread to
refresh yourself. After all, you introduced irrationality. Why can't
you stick to the subject?

> >[this space reserved for the N2EY profile of Leonard H. Anderson]
>
> Heil is still irrational AND lacks orginality.
>
> Heil only wants to engage in character assassination.

That reminds me, you never did answer those items I put to you.
It certainly looks to me like you fit the profile. If you do those
things which the profiles outlines, you'd not be able to make a case for
character assassination. Tell you what--when I have some time later in
the week, I'll take each one of those specifics laid out in the profile,
then go back through some of your old stuff archived at Google and list
them under individual headings. That'd give us a way to determine if
your claim of character assassination is credible. Would that be okay?

> >I'm not going to tell someone whose maximum morse speed that he is
> >proficient and I'm not going to tell Brian Burke that his moronic
> >premise is brilliant.
>
> Heil now tries character assassination on Brian Burke.

That accusation would be another tough sell.

> Brian Burke is NOT the subject of this thread.

Quit trying to hog the limelight, Len.

> Heil thinks that the subject is character assassination.

No. Offhand, I'd say that you think that is the subject. You are the
individual who keeps bringing up that term.

> Heil is still irrational.

You're fixated on character assassination and I'm irrational?

> >I don't know any radio gods. I've never seen one, never spoken to one.
> >I suspect they are superior but I don't know why they'd be irrational.
>
> More irrationality.

Which part is irrational? That I don't know any radio gods? That I've never seen one? That I've never spoken to one? Tell us, Len, if my statement is irrational, have you had conversations with radio gods?

> >> I am a professional.
> >
> >Good for you, Len! Now try for the next part of the sentence, "and
> >amateur radio is not professional". Now you're getting it. Amateur
> >radio isn't professional and you aren't a radio amateur.
>
> Heil is both an amateur AND irrational.

> I am a professional in radio-electronics. I have been such for
> over half a century. I am licensed by the US government in
> radio operation.

...but not in the amateur service. Licensing in another service doesn't really sway the FCC in the granting of an amateur license.

> >Maybe you can tell them when you meet them. I don't expect that to
> >happen until you've expired. How do you intend to get word back to us?

> with wishes for one to "expire."

Where is that wish expressed, Leonard, old boy?

> >> Radio gods were never professional despite their past titles.
> >
> >Gods don't get paid? Why would a god have a past title?
>
> Heil's statements of "past work" indicate he was an amateur.
>
> Heil is an example of the fleecing of America.

[Here it comes, Leonard]

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or government/military service that a radio amateur has, if said radio amateur opposes Mr. Anderson's views, he/she will be the target of Mr. Anderson's insults, ridicule, name-calling, factual errors, ethnic slurs, excessive emoticons and general infantile behavior."

For those keeping track, this one falls under "job" and "government/military service". It uses "insults", "ridicule", "factual errors" and "generally infantile behavior".

Dave K8MN

>
>So we are now to understand that neither she nor you have any
>credentials in psychology despite what you wrote earlier. Glad we
>cleared that up.

Heil does not understand the requisite studies in psychology
necessary for a Masters degree in Social Work.

Heil does not understand the necessary qualifications for
private counseling in Social Work.

Heil is ignorant as well as irrational, mean-spirited, uncivil,
and arrogant.

This is not a newsgroup about psychology.

Psychologists might be interested in studying Heil as a
case example.

Heil attempts character assassination by targeting my
wife.

Heil again demonstrates mean-spirited and uncivil behavior.

>
>> >> Advocacy of code test elimination does not require licensing.

Heil is deliberately misdirecting from the subject to
character assassination.

>> >> Licenses are not required to discuss US government laws.
>> >
>> >You don't need a license to avoid fulfilling the N2EY profile.
>>
>> You are still irrational. Subject is CODE TEST ELIMINATION,
>> not Heil's attempts at character assassination.

>things. The list was quite specific and it touches upon just a few of
>the instances I could come up with. Instead of responding to those

>items, you snipped the entire paragraph and chose to ignore it.

License grants are not required to discuss any part of US
law in open forums.

Heil once again misdirects to character assassination.

>N2EY: "Besides, here's a simple, plain fact:
>
>No matter what job, educational level, employer, or
>government/military service that a radio amateur has, if said radio
>amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
>Anderson's insults, ridicule, name-calling, factual errors, ethnic
>slurs, excessive emoticons and general infantile behavior."

This is another example of Heil's character assassination
tactics.

Heil cannot discuss the subject. He has no valid arguments.

All Heil does is to engage in character assassination.

>Now perhaps you can tell us how you believe your character to have been
>assassinated. I'll be happy to help you by providing more examples of
>your words which I believe fit the profile.

Try to stay focussed on subjects. Avoid misdirections
into character assassination attempts.

>> >> You are only an amateur.

>> >Yes, a radio amateur. You are not.
>>
>> I am a radio-electronics PROFESSIONAL. You are not a
>> professional. You are an amateur in radio.
>
>Sorry old boy, Despite my own professional background in communications,
>this newsgroup isn't about professional radio and electronics.

Heil was paid for services in State Department.

Heil's self-reported activities are those of an amateur, not
a professional.

>This one deals with amateur radio. I'm a radio amateur.
>You're still a bystander.

Amateur radio license grants are not required to discuss any
part of US law in public forums.

Heil has no authority to rule on admissability here.

Heil is an amateur.

I have one of those cars.

> it is useful to know,
>but should not be part of the license test.

That's YOUR opinion. I haven't stated mine.

> By analogy, Morse may be useful for
>some Hams to learn, but there is no need to test for it.
>

That's your conclusion. I haven't stated mine.

>Whether <Morse> code is useful is debatable.

Of course Morse code is useful. Radio amateurs all over the world use it every day.

>I feel <Morse> code is not useful
>and possibly harms to the hobby (and one's "state") more than there are
>benefits.

Why?

Are manual transmissions not useful?

>I feel that the only reason <Morse> code is used is that Hams
>insist on using it.

What is wrong with free choice of modes? How does the USE (not the test, the USE) of Morse code by hams cause any problems?

>Non-testing seems like a reasonable compromise (yes, its still a
>compromise) to accept. As long as it does not affect me, I have no problem
>with
>that. There are enough people that will learn it and <Morse> code skill can

> defintion.

Now I see the disconnect. The dictionary does indeed define
proficient, and putting the word "Morse" in front of it would move me
from the "P" pages to teh "M" pages. Let go there.

Nope. There is no Morse Proficiency defined.

I asked for a WPM rate that is proficient.

You procalim "this" isn't proficient and "that" isn't proficient. Or
"this" is more proficient than "that."

Yet you pass judgement on what is and isn't proficient.

I just don't believe you.

> > Title 47, Part 97 does not address Morse Code proficiency.

Big old snip of real crap

Steve could you please get over your unnatural love for this
"Len" fellow? People are starting to talk.

You really need some time with a mental health professional
to get over this obsession once and for all.

Your pig headed obsession with this guy give a hint as to
why you can't seem to hold on to a job even in a critically
understaffed profession like nursing.

If you think your constant whining about this "Len" fellow
in some way defends or benefits amateur radio you are
even dumber than you appear to be.

Have you ever done anything in your life you are proud
of except pass a silly code exam? I didn't think so.

To the rest, sorry for the rant but it gets really old seeing
these constant personal attacks. It is Steve not Len who
make amateur radio look bad to outsiders but he is just
too stupid to realize it.

>to get over this obsession once and for all.

Hmmmmm...sounds exactly LIKE Lennie. Yet another anonymous personna? I bet it is.

>Your pig headed obsession with this guy give a hint as to
>why you can't seem to hold on to a job even in a critically
>understaffed profession like nursing.

Whew! Been at this facility for over three years, and with the same staffing agency since 96. Yes, I took a sabatical in 2000 to work in a non-nursing job after my daughter and dad died.

Whoopie doo.

>If you think your constant whining about this "Len" fellow
>in some way defends or benefits amateur radio you are
>even dumber than you appear to be.

NO, I don't think it "defends" Amateur Radio. I think it exposes a pathological liar (somewhat like you) for what he is.

>Have you ever done anything in your life you are proud
>of except pass a silly code exam? I didn't think so.

Then you are the one even dumber than he appears. Not that it took much to do. Fools easily succumb to their own rhetoric. Just like Lennie.

>To the rest, sorry for the rant but it gets really old seeing
>these constant personal attacks. It is Steve not Len who
>make amateur radio look bad to outsiders but he is just
>too stupid to realize it.

And you're yet another anonymous idiot without the intestinal fortitude to stand up like a man (I assume) and be counted by putting your name behind your comments.

We'll just refer to you as Mr Scumbag. How's that?

Steve

No, Jim USES Morse Code, ergo he KNOWS how useful it can be.

And you have no evidence other than your spiteful rhetoric to support any claim that Jim wants to halt change. A blatant lie, actually.

Okay. You figure it out. Your wife is a psychologist. Your wife is not a psychologist. You can show your "You're a god. You're not a god" material to her anyway. By the way, have you made up your mind yet? Am I a god or am I not a god?

> Heil is ignorant as well as irrational, mean-spirited, uncivil,
> and arrogant.

We can go over the N2EY profile of Leonard Anderson again if you like. I think we can find numerous examples of your having made comments which show ignorance and in which you demonstrate that you are irrational, mean spirited, uncivil and arrogant.

> This is not a newsgroup about psychology.

Then why did you state credentials through your wife in an earlier post?

> Psychologists might be interested in studying Heil as a
> case example.

They might be. They'd be certain to express interest in studying a seventy year old man with a fixation on amateur radio despite the fact that he isn't a radio amateur. You'll be quick to point out that your rants address getting into amateur radio. With your declaration of several decades of interest, you'd be one of the slowest entrants on record for getting into amateur radio. If we discount the several decades, you've posted here for seven or more years and in that period of time, you still haven't gotten in.

> Heil attempts character assassination by targeting my
> wife.

Your wife isn't a target of anything. We have only your comments relating to her. I'm sure she's nothing like you. She undoubtedly has no idea of how you spend the bulk of your time here.

> Heil again demonstrates mean-spirited and uncivil behavior.

Awwww--did the little old pirhana get his feelings hurt?

No, Heil is trying to determine if you observe in your habits here what
you decry in others. My observation is that you don't.

> >> >> Licenses are not required to discuss US government laws.

> law in open forums.

There was nothing about license grants in what I asked about your
behavior here. Don't you want to address the points in that material?

> Heil once again misdirects to character assassination.

It seems that you don't have a character to assassinate.

> >N2EY: "Besides, here's a simple, plain fact:

>
> This is another example of Heil's character assassination

> tactics.

Not at all, Len old boy. I quoted what I'd asked you. I quoted the profile. I asked if you'd care to comment on any of the items after making a comparison between the profile and what I asked. You've not done so. Do you find that embarrassing?

> Heil cannot discuss the subject. He has no valid arguments.

What subject is it that you address when you belittle someone's job or experience. What subject are you discussing when you make your Nazi references, make up names for people, use the diminuitive form of their names or begin your "Tsk, tsk, tsk" or "Poor baby" routine?

> All Heil does is to engage in character assassination.

Your character can't have been assassinated. You've actually done those things which the profile outlines. Those questions I've asked? They are examples of things you've written here. How do you explain those?

> >Now perhaps you can tell us how you believe your character to have been
> >assassinated. I'll be happy to help you by providing more examples of
> >your words which I believe fit the profile.
>
> Try to stay focussed on subjects. Avoid misdirections
> into character assassination attempts.

You aren't even willing to provide any material you have which refutes the N2EY profile or of the questions I've asked you. How has your character been assassinated? What explanation can you provide for the abundant examples of your writings which lend proof to what is outlined in the N2EY profile?

> >> >> You are only an amateur.
> >> >

> Heil was paid for services in State Department.

State, like most employers, would have a really difficult time retaining people if they weren't paid. Most of us occasionally need money for food, housing, medical expenses, transportation and the like. Did you work for free?

> Heil's self-reported activities are those of an amateur, not
> a professional.

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

> >This one deals with amateur radio. I'm a radio amateur.
> >You're still a bystander.
>
> Amateur radio license grants are not required to discuss any
> part of US law in public forums.

You've discussed. I'm not required to agree with you. I'm not required
to be silent regarding your opinions.

> Heil is an amateur.

A radio amateur. You are some guy who has been standing on the
sidelines for decades. Yet you tell us that you know best how amateur
radio should be regulated. You insult amateur radio (see any Anderson
comments about public service efforts in emergencies) You insult those
who choose to use morse code and who support morse testing. You insult
the ARRL. You insult and impugn those who work for the ARRL. You
insult amateur radio's traditions.

Why would such an individual want to become a radio amateur? What
interest could such an individual have in amateur radio? Why would such
an individual be concerned about regulations governing amateur radio?

You're a silly lad. It is a safe assumption that their maximum code
speed is in excess of .02 wpm. They have to have done magnitudes better
to pass their licensing exam.

> That is where you went down the wrong road.

Treating you as if you had a valid point was where I might have taken
the wrong road.

>
>There's the part where old Avery/Len actually wrote something in this
>one.

Irrational comment by Heil.

>> Heil was again trapped.
>
>I'm sure you're the hero of many of your mental movies.

Heil made a charge. Charge was refuted. Evidence presented.

Heil discards evidence. Heil refuses to consider any reason
but his own imaginings.

>> >> The ONLY person to get copies from my alternate screen
>> >> name was Heil.
>> >
>> >Copies? Only "Heil" got them? You're out of your tree.
>>
>> Heil gets posts from this screen name when I choose to
>> do so.
>
>I'm dying for your explanation about how I'm the only person who
>receives material that you've posted to a newsgroup under your alternate
>screen name.

Heil is dying, may even be dead. Mentally.

Heil grasps for straws in the wind of his own making.

Heil was the only one addressed by me in this newsgroup under
the alternate screen name.

Heil was under a compulsion to answer the alternate-name
posting.

>It isn't as if you'd sent me an e-mail, Leonard. Others
>have noted your blank Avery Labels material. You're out of your tree.

My alternate screen name is NOT "Avery Labels."

I have no connection with the "Avery Labels" business.

>> Heil is treed.
>
>Many a dog believes that he has treed a bird.

Heil is not a bird. His output is sometimes akin to bird-like.

>> >> Heil makes it a point to attack only certain individuals.
>> >
>> >Why would I slam anyone who is civil and pleasant?
>>
>> It is your nature.
>
>[We may be getting near breakthrough here]

It is doubtful that Heil will recognize his own irrationality.

>...and you, Leonard Anderson, consider your behavior here to have been
>pleasant and civil?

Others who are unpleasant and uncivil get replies in-kind.

Most of the poor babies cannot take it. TS.

I strive to turn back from all the misdirection towards subjects.

Heil continually misdirects from subjects to personalities.

Ergo, Heil is irrational.

>As I've told you previously, what you are doing is called transference.

Heil is irrational again.

Heil has no qualifications in psychology.

Heil has absolutely zero rating on diplomacy despite working for
a diplomatic corps.

>> It is "taking place" again. Live with it, poor baby.
>
>I have to call you on this one, Len. You actually wrote something here.
>It wasn't like the previous screwup in your home comm center.

There was NO "screwup" in the original posting under the Avery
Fineman screen name. It was deliberate.

The original posting was deliberately done to illustrate Heil's
behavior in here. As expected, Heil replied with a personal
attack charging "mistake."

Heil continues to cling to the original charge of "mistake."

Heil is obstinate. Heil will not admit his own mistake.

To admit to a mistake is to "lose face" (self-esteem).

Heil is an extra. Heil is an amateur.

Amateur extras do not make mistakes. They are radio gods.

Gods do not make mistakes.

>> I am still a radio-electronics professional.
>
>...and you are still not a radio amateur.

Irrelevant. Amateur radio licenses are not a requirement of
discussion of regulations about amateur radio in public.

I am still a radio-electronics professional.

Heil fancies himself a god. An amateur god.

>
> Others who are unpleasant and uncivil get replies in-kind.

Anyone who disagrees with you, gets an uncivil reply. How do you say
it? You can't take strong opposition.

> Most of the poor babies cannot take it. TS.

I think you meant that most of 'em don't take it.

> I strive to turn back from all the misdirection towards subjects.

Is that how we're treated to regurgitations of you military exploits of
half a century ago? Is that how we learn about your homes and
comfortable life? Is that what you've been doing now?

> Heil continually misdirects from subjects to personalities.

Isn't this where you're supposed to steer a course toward the subject?
Why haven't you done so?

> Ergo, Heil is irrational.

Do you have much of a co-payment on those medications?

> >As I've told you previously, what you are doing is called transference.
>

> Heil is irrational again.
>
> Heil has no qualifications in psychology.

You're right. I have no more knowlege about it than you.

> Heil has absolutely zero rating on diplomacy despite working for
> a diplomatic corps.

Diplomacy, as you've seen in recent weeks, is not just a matter of
sitting around sitting cocktails and exchanging pleasantries. I'm
retired, Len and feel no compunction to take any of your guff.

> >> It is "taking place" again. Live with it, poor baby.

So you say.

> Heil continues to cling to the original charge of "mistake."

There is no evidence showing that anything else took place.

> Heil is obstinate. Heil will not admit his own mistake.

I didn't send any blank posts.

> To admit to a mistake is to "lose face" (self-esteem).

I can understand your reluctance to admit error then.

> Heil is an extra. Heil is an amateur.

You're quite right.

> Amateur extras do not make mistakes. They are radio gods.

False premise not based in fact.

> Gods do not make mistakes.

If one is to believe Greek and Roman mythology, they did.

> >> I am still a radio-electronics professional.
> >
> >...and you are still not a radio amateur.

>
> Irrelevant.

No more than your being a radio-electronics professional. The newsgroup isn't about radio-electronics professionals. It addresses amateur radio, something in which you are not involved.

> Amateur radio licenses are not a requirement of
> discussion of regulations about amateur radio in public.

You've participated. You just haven't sold your grand plan to anyone. You're a guy on a soapbox railing against perceived injustices but you're minus a captivated crowd.

> I am still a radio-electronics professional.

That doesn't get you into amateur radio.

> Heil fancies himself a god. An amateur god.

Another false premise. You, by the way, don't seem to have quite made up your mind on the false premise. One minute you tell me I'm a god and the next minute, you tell me I'm not a god. It's hard to know just what of your material to believe.

Of course it is. And many of the 275 jammers are straight off of 313. Example, the two guys with deep gravely voices. Tripple Nickle and his sidekick. Then of course there is 'Cowboy', he is near Hammond LA.

And from time to time you hear a few of the real old timers....like that goof up in NY.....nothing ever gets done. No one gets off their ass and turns in their neighbors. Nothing changes.

Most of the Stumpjumper moorons have either died or gave up 'playing'. That is a good thing.

Well flash in the pan "L Rod Hubbard" I tell you what the reason is.

For the first time in his radio trashing life he ran into a group of folks
that ...

1. Didn't fall for his bluster and bullcrap.

2. Didn't fall for his 'felony affidavit' bullcrap.'

3. Could care less about his so called organization.

4. Had the gonads to stand up for what was right and finally...

5. Pursued via all means possible his removal from Amateur Radio.

See how simple it is?

Dan, please note that although the names are similar, that poster is
not me.

Among the other ways you can tell who I am is the fact that my
website, where you can really tell who I am, is listed on every post,
and I post from an AT&T newsserver.

Note also, if you remove the "removethispart" from his e-mail address
(much like the anti-spam insert I have in mine) you are left with an
invalid address (unlike mine). E-mail to my address will get to me.

Just so no one's fooled. It's fun to have a fan club, lightweight
though he is.

LRod

From: n2ey@aol.com (N2EY)
>> it is useful to know,
>>but should not be part of the license test.
>
>That's YOUR opinion. I haven't stated mine.

Yes, you have. Someone else came to that same conclusion. This is what the analogy says. Now, you're backing out of it.

Instead of the analogy, why don't you just state your position on Morse code testing?

>>Whether <Morse> code is useful is debatable.
>
>Of course Morse code is useful. Radio amateurs all over the world use it
>every
>day.

You say because Hams use it, that it is useful. This is circular logic. Hams only use it because they WANT to use it, NOT because it may be useful. Just because it is in use does not make it useful.

>>I feel <Morse> code is not useful
>>and possibly harms to the hobby (and one's "state") more than there are
>>benefits.
>
>Why?

It harms the hobby because non-hams know enough about Ham radio to know that Morse code is used.

I mentioned I was a Ham to a bunch of non-Hams in a social situation. I was surprised what non-Hams have the impression of Hams. Someone asked the following questions:
"Do they still use Morse code"? (Then he mentioned that it is long obsolete and even the military does not use it anymore).
"Are Hamfests like Star-Trek conventions"? (After I said I went to a Hamfest).
"Is that like a cult or something"?
"Do Hams participate in social activities"?

I was at a loss at answering each one of these questions.

If you want positive public opinion, get rid of this Morse obsession, or keep it to yourself. It only makes the hobby look bad.

I also think its bad for you, if you don't enjoy it. If individuals enjoy it, it is fine with me - just don't make it represent the hobby.

>What is wrong with free choice of modes? How does the USE (not the test, the
>USE) of Morse code by hams cause any problems?

Nothing wrong with free choice of modes. However, it is emphasized so much that other modes suffer. Also, don't tie Morse code requirement to the general test - that is not free choice of modes.

>Heil does not understand the requisite studies in psychology
> necessary for a Masters degree in Social Work.

The point, Your Pointedheadedness, is that you have foisted your spouse's alleged credentials upon this newsgroup insunuating that she is a skilled (if not licensed) psychologist.

Seems you're not the only Anderson in that household without a license to practice that which is preached...

>Heil does not understand the necessary qualifications for
> private counseling in Social Work.

How does Anderscum know this for a fact?

>Heil is ignorant as well as irrational, mean-spirited, uncivil,
> and arrogant.

Pot/kettle/black.

>This is not a newsgroup about psychology.

Then why do you feel it necessary to insert your wife into various posts as allegedly being a psychologist? How is it germane to the Amateur Radio Code test issue?

>Heil attempts character assassination by targeting my
> wife.

Collaeral damage. You should have left her out of it, Your Putziness.

>Heil again demonstrates mean-spirited and uncivil behavior.

And YOU are a paragon of virtue, Lennie...?!?!

>Heil is deliberately misdirecting from the subject to
> character assassination.

And Lennie once again edited out very specific questions directed at him.

Whew.......

>License grants are not required to discuss any part of US
> law in open forums.

Licensure was not the topic of discussion.

Source record: 63305

My associate just informed me that a quick cruise across
the ham bands yields the expected increase in "war" stories
from the elder ham population. The most common lead-in
phrases seemingly start with:

When I was a Special Ops troop in Nam...
During my sixth tour of duty in Nam...
In Beruit we were in the middle of it...
In Desert Storm we kicked ass when...
Back in WWII we...
My Navy SEAL team was responsible for...
Our Air Commando Team in Nam was...

Oh well, hams have ALWAYS been great story tellers. At
least you 14275 addicts may lay off of Baxter for a few days,
until you get tired of hearing each other's war exploits of days
gone by. No wonder today's kids have no interest in this
hobby!

73,

Lloyd's Diner
